Transbond™ XT

Light Cure Adhesive

Transbond™ XT Light Cure Adhesive bonds metal and ceramic brackets to tooth surfaces. Available in both syringes and capsules, this adhesive uses light cure adhesive technology to provide you with additional working time to ensure accurate bracket placement.

The viscosity of Transbond XT adhesive was designed to prevent adhesive run-on and bracket skating that saves you money and reduces adhesive waste. 3M Unitek's adhesive-filled capsules and dispensing gun also provide for easy application, increased control and convenience. A syringe delivery system is available too. Best of all, the Transbond XT adhesive's quick cure provides for immediate archwire tie-in so your patients and staff can experience shorter bonding appointments.

Command Cure
- Quick ceramic/metal bracket cure

Extended Working Time
- Allows precise bracket placement

Immediate Bond Strength
- Allows archwire to be tied in immediately following cure

Versatile
- Saves time for rebonds
- Efficient bonding of ceramic and metal brackets

Pre-loaded Syringes or Capsules
- No waste of materials

Excellent Handling Properties
- No bracket drift
- Easy flash clean-up

Transbond™ LR
Light Cure Adhesive

Our Transbond™ LR Adhesive has been developed specifically for bonding lingual retainers. Easy to apply, it has optimal handling characteristics that allow you to shape and finish the adhesive around lingual retainer wire for maximum patient comfort. Like the Transbond™ XT Adhesive, working time is extended so accurate placement is enhanced and product waste is minimized.

Transbond™ LR Capsule Kit
25 capsules (0.2g each)
6 ml Transbond XT Primer
1 adhesive dispensing gun
1 brush holder
60 brush inserts
712-033

Transbond LR Capsules
25 capsules (0.2g each)
712-038

Adhesive Dispensing Gun
712-032

EZ3 AlastiK™ Holder
Holds lingual retainer wire securely in place during bonding
10/pk
406-044

Transbond™ XT Primer Bottle
6 ml
712-034

Flowable Adhesive, Direct Bond Strength
