Excellent as a low-stress liner

Excellent as a bulk fill base

Up to 4 mm depth of cure

Low polymerization stress

Less shrinkage stress than more highly filled, sculptable composites

Excellent wear resistance

Flow-on-demand handling

Easy cavity adaptation

High radiopacity

Available in 4 shades

Reduce procedure time and increase your confidence with this bulk fill flowable.

Excellent as a liner.

Flowable composites are designed to adapt easily, reducing the chance for voids and providing a good marginal seal to reduce the risk of post-operative sensitivity. These benefits are likely why 75% of dentists surveyed use a flowable composite as a liner.¹

Excellent as a time-saving bulk fill base in deep restorations.

Filtek™ Bulk Fill Flowable Restorative is formulated for low stress and an increased depth of cure, so it can be placed with confidence in one convenient 4 mm increment. The restoration is then completed with a minimum 2 mm thickness of a posterior or universal composite such as Filtek™ Supreme Ultra Universal Restorative.

More reasons to make this flowable your top choice …

Excellent handling

Highly radiopaque

Less shrinkage stress

than more highly filled, sculptable composites
