3M Introduces Bulk Fill Restorative with Improved Aesthetics

One-step placement for fast and easy aesthetic results

Designed for the posterior, the unique optical properties and improved opacity of Filtek™ One Bulk Fill Restorative enable the simplicity of one-step bulk placement – up to 5mm – with improved aesthetics. These improvements are the result of further developments of 3M’s nanotechnology, which allows for the management of opacity and depth of cure in a smarter way. With 3M’s unique Smart Contrast Ratio Management technology, Filtek One Bulk Fill Restorative features increased opacity without reducing depth of cure.

Claims are in comparison with 3M™ Filtek™ Bulk Fill Posterior Restorative and supported by 3M data on file.

Did you know?

3M™ RelyX™ Fiber Post 3D Core Procedure made easy!

For a simplified post and core procedure all you need is the new RelyX™ Fiber Post 3D plus three other easy-to-use 3M products: RelyX™ Unicem 2 Self-Adhesive Resin Cement, Scotchbond™ Universal Adhesive, and new Filtek™ One Bulk Fill Restorative. These four products have one common objective: Simplify the Post and Core Procedure!

The new generation 3M™ RelyX™ Fiber Post 3D is equipped with 3D macro retention grooves in the coronal section for higher mechanical retention to the core build-up material. The coronal area also has a partly flattened side, enabling a safe grip with tweezers. At the conical end, a microporous surface allows for high mechanical retention for the cement and a strong bond to the root canal. The new posts are made from highly radiopaque glass fibers embedded into a composite resin matrix, resulting in enhanced radiopacity and enabling better post position control.

Claims are in comparison with RelyX™ Fiber Post and supported by 3M data on file.

Direct restorations with 3M™ Filtek™ One Bulk Fill Restorative on upper premolar and molar due to primary and secondary caries.

Clinical dentistry and photography by: Dr. Giuseppe Marchetti, Parma, Italy

About the Case:
Female patient 35 years old. The patient came to the dental office with caries in multiple teeth and pain.

Challenge:
For direct restorations like these, it is critical to have excellent adaptation to ensure good marginal contact. Good handling and sculptability are important when shaping the material.

Dental Tips, Tricks and Hacks: “Winning the Direct Restorative Game”
Presented by Dr Marcos Vargas

Patient demands for aesthetic and conservative dentistry has emphasised the need to produce long-lasting and life-like anterior restorations in daily practice. This course will provide the dentist with practical information and step-by-step techniques that can be used in your office immediately to improve quality, efficiency and aesthetics. This course will include:

- Easy shade selection for direct anterior restorations
- Cavity preparation for blending
- Material manipulation
- Contouring and polishing
- Bulk Fill application and techniques for posterior restorations

**If bonus not nominated, A2 Capsules, A2B Capsules and 2382C will be provided.**
You choose it for speed. Now it’s more aesthetic, too.

You choose time-saving materials to be more efficient. But, as you know, while patients appreciate shorter appointments, their top concern when it comes to a restoration is how it looks - even in the posterior area. That’s why 3M created 3M™ Filtek™ One Bulk Fill Restorative. Designed for posterior restorations, it gives you the simplicity and speed of bulk placement up to 5mm - without compromising aesthetic results. Now efficient restorations can be aesthetic, too.
