Imprint™ Bite Registration Material

Syringe material onto the occlusal surface of the teeth. **Oral Working Time:** 20 seconds.

Have the patient close (or guide the patient) into proper occlusion. **Oral Set Time:** 1 minute.

Remove from the mouth. Rinse, dry, disinfect and trim the registration as needed.

**Important Information**

The Closed Bite Technique is also recommended for use with Imprint Bite material.

Avoid contact with chemicals known to inhibit the set of VPS materials such as latex rubber, acrylic and methacrylate residues.

To avoid inhibition caused by temporary materials, registrations should be made before fabricating the provisional crown or bridge.

Disinfect the impression after it has been removed.
