Sterilization Assurance Products for the Food and Beverage Industry

Your Quality Assurance lab supplies may have been through the sterilizer—but that doesn’t mean they’re sterile. Many factors can adversely affect the sterilization performance in your autoclave: steam quality, incorrect time or temperature levels, the number of items being run through a cycle at the same time, and the presence of air pockets or cold spots in beakers or tubes.

With 3M Sterilization Assurance Products, you have a simple and efficient method to accurately monitor your steam sterilization process. These products can help QA labs document their results as part of a good HACCP plan.

That’s because these monitors are capable of integrating time, temperature and steam quality to help ensure that proper conditions are present to achieve sterilization.

3M has long been a worldwide leader in sterilization assurance products, helping health care professionals meet their industry’s stringent standards. 3M sets today’s standards for sterilization process monitoring with dependable, high-performance products that are manufactured in an ISO 9002 certified site. 3M also provides an easy-to-follow program, customer service and technical support. For more information, contact the 3M Customer Helpline at 1-800-228-3957.

3M™ Attest™ Biological Indicator
- Gives the best assurance—or verification—that items were successfully subjected to sterilization conditions
- Introduces live, highly resistant, non-pathogenic spores (Bacillus stearothermophilus) into the sterilization cycle to detect the actual killing of the spores during the cycle

3M™ Comply™ Chemical Integrator
- Indicates if conditions (time, temperature and steam quality) for sterilization have been met
- Assesses autoclave performance

3M™ Attest™ Monitoring Starter Kit
- Provides everything you need to begin effective monitoring of your sterilization process, including a training video and materials

3M™ Attest™ Incubator
- Allows quick, on-site monitoring

3M™ Attest™ Record Keeping System
- Allows you to accurately keep track of sterilization for Quality Assurance documentation
