#### Description

3M™ Piezo Ink Jet Ink Series 4000 is a pigmented, solvent based ink approved for use with the VUTEk UltraVu™ 3000/3300 and 5000/5300 Printers to produce multi-color, permanent and durable graphics.

#### More Information on the Web

To find out more about piezo ink jet printing and software profiles that help ensure successful printing, visit our website at [www.scotchprint.com](http://www.scotchprint.com). Then click on *business partner login*, which is located under the Scotchprint® logo.

To enter the *business partner login* area, you must be a Scotchprint® Graphics Authorized Manufacturer or 3M Piezo Ink Jet Registered Fabricator. If you are not, please contact your 3M sales representative or Lisa Burns ([ljburns3@mmm.com](mailto:ljburns3@mmm.com) or 651-736-9719).

#### Product Line

This information is subject to change. Be sure this is the most current Product Bulletin. See 3M Related Literature at the end of this bulletin.

No.	Color	Stock No.
4091	Magenta	75-3469-5864-0
4071	Yellow Toned Magenta	75-3469-5889-7
4092	Yellow	75-3469-5865-7
4095	Black	75-3469-5866-5
4096	Cyan	75-3469-5867-3

#### About the Magenta Inks

3M offers you two choices in magenta--a regular and a yellow-toned. This gives you the opportunity to extend your color gamut to meet the color needs of your customers.

- The **regular magenta (4091)** is good for graphics with cool reds and purples. This color gamut closely replicates colors achieved on the Scotchprint® Printer 2000.
- The **yellow toned magenta (4071)** is good for graphics with oranges and warm reds. This color gamut is similar to other ink manufacturers.

Note: Do not use yellow toned magentas in combination with regular magentas.

#### Compatible Products for Warranted Graphics

Note: For details on using a particular film or substrate for piezo ink jet printing, please refer to that product's Product Bulletin.

#### 4 mil Films

- 3M™ Controltac™ Plus Graphic Film IJ160-10
- 3M™ Controltac™ Plus Graphic Film Series IJ162
- 3M™ Scotchcal™ Graphic Film IJ3470
- 3M™ Scotchcal™ Changeable Graphic Film IJ3555
- 3M™ Scotchcal™ Perforated Window Graphic Film IJ8171
- 3M™ Scotchcal™ Graphic Film IJ8641
- 3M™ Scotchcal™ Removable Graphic Film IJ8643

## 2 mil Films

- 3M™ Controltac™ Plus Graphic Film IJ180-10
- 3M™ Controltac™ Plus Graphic Film IJ180C-10
- 3M™ Scotchcal™ Graphic Film Series IJ3650
- 3M™ Scotchcal™ Graphic Film IJ3630-20

## Reflective Films

- 3M™ Scotchlite™ Plus Flexible Reflective Graphic Film IJ680-10
- 3M™ Scotchlite™ Plus Flexible Reflective Graphic Film IJ680CR-10
- 3M™ Scotchlite™ Reflective Graphic Film IJ5000
- 3M™ Scotchlite™ Reflective Graphic Film IJ5100R

## Banner Materials

- 3M™ Banner Material 8450 *single sided*
- 3M™ Single-sided Banner Material 8451
- 3M™ Banner Material 8452
- 3M™ Mesh Banner Material 8453
- 3M™ Panagraphics™ II Intermediate Flexible Substrate

## Clear Coats and Overlaminates

- 3M™ Screen Print Gloss Clear 1920DR
- 3M™ Screen Print Gloss Clear 2920DR
- 3M™ Screen Print Gloss Clear 9720UV
- 3M™ Scotchcal™ Luster Overlamine 8519
- 3M™ Scotchcal™ Matte Overlamine 8520
- 3M™ Piezo Ink Jet Protective Clear 8530
- 3M™ Scotchcal™ Luster Overlamine 8908
- 3M™ Scotchcal™ Matte Overlamine 8909
- 3M™ Scotchcal™ Optically Clear Overlamine 8914

Note: 3M™ Screen Printing Gloss Clear 9720 UV is NOT warranted for graphics printed on VUTEK printers.

## Application Tapes

- 3M™ Prespacing Tape SCPS-2, SCPS-55
- 3M™ Premasking Tape SCPM-3

## Cleaning Solvent

- 3M™ Thinner CGS-50

## Health and Safety

### Caution

When handling any chemical products, read the manufacturers' container labels and the Material Safety Data Sheets (MSDS) for important health, safety and environmental information.

To obtain MSDS sheets for 3M products:

- By fax, call 1-800-364-0768 in the US and Canada or 1-650-556-8417 for all other locations.
- Electronically, visit us at <http://www.3m.com/msds>.
- By mail, or in case of an emergency, call 1-800-364-3577 or 1-651-737-6501.

When using any equipment, always follow the manufacturers' instructions for safe operation.

## Ventilation

Provide local and/or general exhaust ventilation in the printing drying areas to prevent a build up of solvent vapors and to maintain levels of solvents below the limit for worker exposure. An experienced industrial ventilation engineer and/or a certified industrial hygienist can help evaluate your ventilation requirements and design based on your site process conditions. VUTEK, the printer's manufacturer, also provides ventilation information. Please refer to their literature too.

Note: Additional environmental, health and safety information is available in EHS Bulletin 4000, which is available on our web site at [www.scotchprint.com](http://www.scotchprint.com). See page 1 for how to access the site.

# Guidelines for Successful Printing with Solvent-Based Piezo Ink Jet Inks

## The Role of the Printer Operator

An operator who understands pre-press operations and the relationship between media characteristics, printer setup, total ink coverage and drying time can produce graphics that achieve the performance expectations of the media and the customer. The operator should also work with the graphic designer and/or color conversion operator so there is a common understanding of print and media parameters.

A wide variety of printing media (substrates) can be used with piezo ink jet printing. Although 3M media have been extensively tested in laboratory conditions, the knowledge and skill of the operator is the most important factor in producing high quality graphics.

## About Solvent-Based Piezo Inks Used in This Printer

The inks used in this printer contain a high percentage of solvent. If the solvent is not evaporated quickly through heat and air, it may significantly affect post-printing operations and how the media handles when applying it.

## Solvent's Affect on Media and the Printed Image

Normally, the solvents in piezo inks do not damage the media or adhesive unless the solvent remains too long on the media and is also absorbed by the adhesive. When the media is not sufficiently dried immediately after processing, it may result in edge curling, shrinkage, aggressive adhesive and/or stretching, which contribute to handling and performance problems. Also, the graphic may be hard to overlamine and it could be damaged due to smearing or blocking during handling. The more solvent you can eliminate, the better the media performance.

## How to Manage the Total Physical Amount of Ink on Media

Testing shows that properly managing the total physical amount of ink laid down in any area on the graphic results in better image quality, less ink usage, quicker drying times and greater throughput. It also helps ensure good media performance.

To help you achieve these goals, we have established maximum Total Ink Coverage for each 3M media. Total ink coverage is the total percentage of all inks (CMYK) used in the darkest shadow regions of the graphic. For example, CMYK values of 60%, 60%, 60% and 100% produces a total ink coverage of 280%.

Note: Some software or color printing reference books may refer to total ink coverage as: total area coverage; total dot area; max CMYK; maximum ink amount; total ink limit; total printing dot.

There is a common misconception that because the ratio of ink solids to solvent is very low, the only way to achieve satisfactory density is to use high ink coverage. Testing shows that in many cases you can achieve very good density with lower total ink coverage with little or no loss of quality. The rest of this section discusses options for managing the total ink coverage.

## Setting Total Ink Coverage During Color Separation

*The best results can be achieved when total ink coverage is taken into consideration by the graphic designer and set during pre-press operations.*

The graphic designer and/or color separator should always discuss printing parameters with the piezo press operator so that the total ink coverage can be set during separation. The typical methods of color separation are Adobe® Photoshop®, ICC-based color management, third party color separation packages and direct conversion to CMYK at the time of scanning.

Part of establishing the total ink coverage is determining maximum black. We recommend limiting black ink to the minimum level necessary to achieve a maximum density. For example, if you review a series of black patches in 1% increments from 90% to 100%, a visible difference in density usually stops being noticeable between 94% and 100% of total black. When doing color separations, we recommend setting the UCR/GCR between 260% and 280% and no more than the recommended total ink coverage (usually 300%).

## Correcting Total Ink Coverage During Printing

If the total ink coverage on a color-separated image is too high for the media and your RIP software supports ink limiting, you may be able to use this function to reduce the total physical amount of ink on the media.

For example, in 3M's **Scotchprint® Graphic Maker Software**, the ink limiting feature manipulates the print data to reduce the amount of ink used while maintaining color balance for the best possible image quality. It does this by limiting the number of ink spots that are printed over the top of one another without restricting the 100% solid colors (cyan, magenta, yellow and black). Ink limiting can be set for none, 100%, 150%, 200% or 250%.

If you are not using Graphic Maker software, consult your RIP software manual for how to limit ink.

### *If you do not have print time ink limit functions*

You may have to reparate your image for correct total ink coverage. This is not the an optimal method as loss of color fidelity and image quality problems can occur.

# Keys to Successful Printing and Application

There are many keys to successful printing and application. The two most important keys for successfully printed media are total ink coverage and drying. The two most important keys for successfully using the inks are color management and using printer profiles. However, because of the variety of media used and the different operating conditions of each shop, follow all keys to achieve overall success.

## 1. Discuss the project with the graphic designer and/or color separator.

Make sure the designer and/or color separator know the parameters and printing recommendations for both the media and press being used for each graphic.

## 2. Discuss the project with the media applicator.

Work with the media applicator so you are both aware of any special handling or application techniques that may be needed for the selected media construction.

Any combination of high total ink coverages, hot application temperatures, and irregular application surfaces may make applying the media more difficult.

Be aware that all 4 mil films with an overlamine will tent over rivets; this is true for all printing technologies.

## 3. Select the right media for your type of graphic and application needs.

- Each media has specific intended uses and applications, which are described in the media's Product Bulletin.
- Do not use rolls of media that are damaged; it can result in printer failure.
- Condition the media for 24 hours in the same environment as the printer.

## 4. Understand the unique processing characteristics needed for each media.

- *Specific Media Processing Recommendations* on page 5 are guidelines we have developed that help provide the best graphic results with the media you are using.
- *An clear coat or overlamine* is required for graphics subjected to abrasion such as road debris and automatic/power washing, harsh cleaners, or chemicals.
- *Clear and translucent films for backlit signs require special consideration.* Clear films tend to be more sensitive to shrinkage due to high total ink coverage. Film that is not sufficiently dried prior to creating an overlap may shrink and result in a light leak. Rather than increasing the total ink coverage to increase the density of the backlit image, we recommend printing two layers of film at lower ink levels. Refer to the appropriate instruction bulletin for the technique.

## 5. Achieving maximum image quality requires good color management and correct settings

### a. The operator must have excellent pre-press skills

Good color management practices are essential. For good color output, color separations must take into consideration the printer, the halftoning method and the ink series being used. You can use whatever method you are accustomed to that provides the desired printing results, which may include Photoshop®, high end scanners or ICC profiles.

### b. Always use the correct software profiles.

Each media has a unique printer profile that helps ensure successful printing. You can obtain ICC profiles for this VUTEk printer by going to our web site. Just go to [www.scotchprint.com](http://www.scotchprint.com). Then click on *business partner login*, which is located under the Scotchprint® logo. You'll find ICC profiles in the piezo ink jet printing area.

Note: To enter the *business partner login* area, you must be a Scotchprint® Graphics Authorized Manufacturer or 3M Piezo Ink Jet Registered Fabricator. If you are not, please contact your 3M sales representative or Lisa Burns ([ljburns3@mmm.com](mailto:ljburns3@mmm.com) or 651-736-9719).

### c. Use the printer settings discussed in **Specific Media Processing Conditions** on page 6.

## 6. Limit the total ink coverage.

Refer to the "How to Manage the Total Physical Amount of Ink on Media" on page 3.

Too much ink on the media results in media characteristic changes including shrinkage, loss of changeability, loss of positionability (Controltac *Plus* graphic films) and air release features (Controltac *Plus* graphic film with Comply performance), as well as inadequate drying, overlamine lifting, difficult application and/or poor graphic performance.

## 7. Don't take shortcuts when drying graphics.

Graphics that seem dry to the touch may still be saturated with solvent. This causes the graphic to become soft and stretchy and the adhesive may become too aggressive. Use the maximum dryer setting available for your printer that will not distort or damage the media.

*Step 7 continued on the next page.*

Step 7, continued.

If the graphics don't seem to be drying sufficiently in the printer, we recommend increasing drying time or drying temperature in the printer, or using an auxiliary dryer to complete the drying (2 hours @ 150°F should be sufficient), or air drying. Air drying is less effective than oven drying. The average air drying for graphics printed with a total ink coverage of 300% is about 12 hours; graphics printed with higher total ink coverage may require up to 24 hours.

Remember, reducing total ink coverage reduces solvents and therefore reduces drying time.

**To check dryness**, use the Dryness Test on page 9.

These are problems that may occur due to insufficient drying.

- If the media you are using is a Controltac *Plus* graphic film, the positionability feature will be significantly reduced if the film is not sufficiently dried.
- You may notice some problems, such as blocking or embossing, when the graphic is unrolled prior to application.
- An overlamine may be difficult to apply.

Too high a drying temperature can distort the printing media, resulting in:

- Transport problems in the printer.
- Wrinkling when the printed graphic is overlaminated or premasked.

#### 8. Prepare test graphics.

The default settings in the printer for drying temperature and time, and the preselected settings in the software for total ink coverage and linearization, may not be the optimum for the graphic that you are printing.

You'll save time and money if you print test graphics for each media type you use. Print the graphics at different printer settings, total ink coverage and drying times. We recommend starting your tests with the total ink coverage at 250% to 270%. Refer to Specific Media Processing Recommendations, below, for guidelines. Keep these samples for future reference.

If the graphic is wound on a spindle or core during printing, check to see that the graphic does not emboss or block after being dried in the printer.

#### 9. Follow all operation and maintenance procedures recommended in the printer user's guide.

### About Printing On Double Sided Banner Material

For the best results, print on the rougher side first, and then on the smoother side. This reduces the potential problem of the material sticking on the post-heat printer surface.

Inadequately dried material will stick to the printer during the second side printing.

### About Scotchlite Reflective Graphic Film

Ink series 4000 can be used with approved Scotchlite films; however, ink series 4000 is semi-transparent and may reduce the retroreflectivity of the film.

Close color matching of multi-sheet graphics is difficult on retroreflective materials because production lots may vary. Adjoining panels of reflective graphic film must be checked for both daytime and nighttime appearance.

## Specific Media Processing Recommendations

Note: For the full product names of the 3M products listed on this page, please see pages 1 and 2.

The most commonly recommended printer setting is "Ultra Standard" because of its image quality. It has the added bonus of providing the longest dwell time in the dryer.

Run the pre-heat temp very low (80° to 120°F / 26° to 49°C) so you get sufficient dot gain. Run the post-heat (dryer) at 180° to 190°F (82° to 88°C) to dry out as much solvent as possible and facilitate drying. The more solvent you can eliminate, the better the media performance.

Media	Total Ink Coverage (Maximum)	Overlamine or Clear Coat Required?	Lifting on Corrugations/ Tenting on Rivets	Other Considerations
IJ160-10	300%		Possible at high total ink coverage	
IJ162	300%	YES, an overlamine	not applicable	

Specific Media Processing Recommendations continued on the next page.

*Specific Media Processing Recommendations, continued.*

<b>Media</b>	<b>Total Ink Coverage (Maximum)</b>	<b>Overlaminates or Clear Coat Required?</b>	<b>Lifting on Corrugations/Tenting on Rivets</b>	<b>Other Considerations</b>
<b>IJ180-10</b>	300%	YES, fleet graphics	Possible at high total ink coverage	
<b>IJ180C-10</b>	300%	YES, fleet graphics	Likely at high total ink coverage	
<b>IJ680-10</b>	300%	YES, selected applications	Not applicable	
<b>IJ680CR-10</b>	300%	YES, fleet graphics	Not applicable	
<b>IJ3470</b>	300%	Yes, selected applications	Possible at high total ink coverage	
<b>IJ3555</b>	300%	Yes, selected applications	Possible at high total ink coverage	
<b>IJ3650</b>	300%		Not applicable	
<b>IJ3650-114</b>	300%		Not applicable	Pay close attention to Key 4, page 4.
<b>IJ3555</b>	380%		Possible at high total ink coverage	There may be some shrinkage at this ink coverage level and default printer drying time and temperature.
<b>IJ3630-20</b>	380%		Not applicable	
<b>IJ5000</b>	300%	YES, all printed graphics	Not applicable	
<b>IJ5100R</b>	300%	YES, all printed graphics	Not applicable	
<b>IJ8171</b>	300%	YES, an overlaminate	Not applicable	<p>Due to the perforations in this film, it is harder to match the image quality than with a solid film.</p> <p>Higher total ink coverage increases drying issues; the film may lift from liner, stick to liner when rolled up, wrinkle when being overlaminated.</p> <p>Undried solvent can cause film to lift from substrate after application.</p> <p>If you experience edge curling during printing, lift the printer carriage to avoid printer head strike.</p> <p>Pay close attention to the shipping recommendations in Product Bulletin IJ8171</p>
<b>IJ8641</b>	300%		Not applicable	
<b>IJ8643</b>	300%		Not applicable	
<b>8450</b>	270%		Not applicable	Banner material is susceptible to blocking or embossing when rolled, especially if the graphic is not totally dried.
<b>8451</b>	270%		Not applicable	
<b>8452</b>	270%		Not applicable	
<b>8453</b>	270%		Not applicable	

Note: For the full product names of the 3M products listed on this page, please see pages 1 and 2.

## Using Overlaminates, Clear Coats and Application Tapes

Note: See the table on page 8 for an overview of film and overlaminate/clear coat recommendations as of the date of publication. Please refer to the film Product Bulletins for complete details.

Refer to Instruction Bulletin 4.22, *Cold Roll Lamination*, for applying overlaminates.

Refer to Instruction Bulletin 3.11 for printing details on clear coat 1920DR.

Refer to Instruction Bulletin 3.18 for printing details on clear coat 2920DR.

Refer to Instruction Bulletin 3.4 for printing details on clear coat 9720UV

### When to Use an Overlaminate or Clear Coat

#### *Graphics that Require Protection to be Warranted*

Most graphics, even durable, ink jet printed graphics, require additional protection under certain conditions. When using ink series 4000, the durability of the graphics is reduced when frequently subjected to any of the following environments: road debris or impinging foreign debris, foreign material rubbing on the graphic, power washing equipment, aggressive brushing, occasional chemical spillage such as acids and alkalis, and petroleum products such as gasoline spills at pumps.

Therefore, to protect the ink and graphics and receive the Warranted Durability, an overlaminate or clear coat is required when the graphic is used in such environments.

#### *Graphics that Specifically Require an Overlaminate or Clear Coat*

- Graphics on the exterior of vehicles and railroad rolling stock
- Any graphics exposed to the abrasive or harsh environments mentioned above
- All graphics for floors
- Window graphics that require optical clarity (use overlaminate 8914)

#### *Graphics that Do Not Require Protection to be Warranted*

If the graphics are not exposed to the environments listed above, an overlaminate or clear coat is not required to receive the Warranted Durability given in the film's Product Bulletin. However, for graphics applied in high contact areas such as bus shelters, hallways, etc., using an overlaminate or clear coat will provide additional protection.

### How to Select an Overlaminate or Clear Coat

Typically, an overlaminate or clear coat is selected based on the following criteria. Refer to the overlaminate or clear coat's Product Bulletin for details.

1. Intended application: make sure the film and overlaminate or clear coat you select are recommended for your end use
2. Type of available processing equipment (screen printing, laminator or other coating equipment)
3. Desired durability
4. Gloss
5. Cost

### When to Use an Application Tape

The type of 3M application tape to use depends on the type of graphic produced.

- Use premasking tape if there is very little exposed liner.
- Use prespacing tape if graphics have large amounts of exposed liner or are kiss cut.

Refer to the table above for the appropriate application tape. Refer to the Instruction Bulletin 4.3, June 2000 or later, for more complete information on applying the recommended application tape.

Note: For the full product names of the 3M products listed on this page, please see pages 1 and 2.

**Recommended Overlaminates, Clear Coats and Application Tapes**

This is an overview of film and overlaminate/clear coat recommendations as of the date of publication. Please refer to the film Product Bulletins for complete details.

<sup>1</sup> See **Using Overlaminate, Clear Coat and Application Tapes**, page 7.  
<sup>2</sup> Do not use overlaminates 8908 and 8909 for use on fleet graphics, exterior reflective film or certain banners. Check the film bulletin for details.  
<sup>3</sup> Clears 1920DR, 9720UV and 2920DR must be screen printed to be warranted. Do not use these clears on interior graphics. 9720UV must be UV cured.  
<sup>4</sup> Films with Comply performance use only premasking tape SCPM -55.  
<sup>5</sup> Overlaminate 3645 is required for floor graphics.  
<sup>6</sup> Use overlaminate 8914 when optically clear window graphics are required.  
<sup>7</sup> Do not use matte overlaminates on graphics made with reflective film.  
<sup>8</sup> Clear 8530 is designed for use only with the Seal Graphics AS1600, SW3000 Liquid Laminator or PrintSeal 1000.

Note: For the full product names of the 3M products listed on this page, please see page 1.

## Dryness Test

### Caution

When using any equipment, always follow the manufacturers' instructions for safe operation.

The conveyor times given in the previous section vary with the equipment being used, the amount of thinning, oven temperature, humidity conditions, etc. Insufficient drying can result in blocking or severe surface impression. Therefore, it is important to check for sufficient dryness when the printing starts. We recommend using the following procedures to determine if adequate drying has occurred.

1. This test is used to set the dryer conditions and approximate degree of dryness.
  - a. Touch a printed sheet face to face.
  - b. Place the touched area close to your ear and separate it.
  - c. If the graphic is adequately dried, there is either a slight or no discernible sound when the surfaces separate. If the graphic is not sufficiently dry, a crackling sound is heard. The louder the sound, the greater the amount of additional drying needed.
2. This test is used to definitely determine if adequate drying has taken place.
  - a. Place several printed sheets face-to-face under a 12 inch (30 cm) stack of media or under a weight of 2 pounds/square inch (135 gm/cm<sup>2</sup>).
  - b. After 10 minutes, remove the sheets and check for blocking or surface impressions.
  - c. If blocking or severe surface impressions are noted, increase the drying time. If you are jet drying, either increase the temperature or decrease the belt speed.

## Support Information for the UltraVu Printer

- Hardware support information for the UltraVu printer is available on the VUTEk website at [www.vutek.com](http://www.vutek.com).
- Contact 3M Technical Support (1-800-328-3908) for questions about using 3M inks and media, color profiles, color calibration, temperature and machine settings.

## Graphic Maintenance and Cleaning

To clean a finished graphics, use a cleaner such as the kind used for high-quality painted surfaces. The cleaner must be wet, non-abrasive, without strong solvents and have a pH value between 3 and 11 (neither strongly acidic nor strongly alkaline.)

## Printer Cleaning and Routine Printer Maintenance

Printer cleanliness is very important in the production of high quality, full color graphics. You must follow the routine maintenance schedule in the VUTEk UltraVu User's Guide, including the periodic changing of in-line filters.

We recommend that each customer assign a master operator that will have maintenance responsibilities. This person will be trained by a technician during printer installation and must use the recommended methods and safety measures.

You will need thinner CGS-50 cleaner for performing normal printer maintenance.

## Ink Change-Over

Proper ink change-over is critical. Failure to make the change-over correctly will result in poor image quality and/or graphic failure. Improper procedures may damage the printer.

The ink change-over procedure must always be followed in these situations.

- When you change from yellow toned magenta to regular magenta ink.
- When you change the full set of inks from or to 3M piezo ink jet ink series 4000.

Follow the instructions in Instruction Bulletin 4.28, *Ink Change-Over: 3M™ Piezo Ink Jet Ink Series 4000*.

## Shelf Life, Storage and Shipping

### Ink

- Store ink series 4000 in the original packaging.
- Store the inks at 32° to 90°F (0° to 32°C).
- Use the inks within one year of purchase.
- Ink series 4000 is classified as non-hazardous by the U.S. Department of Transportation. The inks are non-regulated when transported via ground and air.

### Finished Graphics

- Be sure ink series 4000 is dry before packaging the finished graphic.
- Ship the finished graphic lying flat or rolled. To roll, wrap the graphic, printed image side out, onto a core that is 5 inches (130 mm) or larger in diameter. These methods help to prevent the liner from wrinkling or popping off.

- Put a slip sheet, such as 3M™ Release Liner SCW-33, on the face of the printed side of these types of graphics: a graphic that is premounted on panels, panels that have graphics on both sides, or a liner that is printed by a customer.
- Store the graphics in a clean, dry area.
- Store the graphics out of the direct sunlight and at a temperature less than 100°F (38°C).

## Waste Disposal

Waste from the printer includes ink and solvent waste, printer blotting cloth, and plastic bottles. Please handle all waste in a responsible manner. Some general guidelines are provided below.

### Inks

The inks are considered non-hazardous waste according to U.S. EPA requirements. Even though the inks and solvents are classified as non-hazardous, non-regulated waste, the EPA requires that any ink and solvent waste must be incinerated in an industrial or commercial facility. Do not pour the inks or solvents down the drain, or put in the general trash or in a landfill. Since regulations vary, consult applicable regulations or authorities before disposal.

### Printer Blotting Cloth or Toweling (wipes)

The printer blotting cloth or toweling can be disposed of in the general trash or in a landfill if free liquid cannot be squeezed out. If inks can be squeezed out, the blotting cloth should be incinerated in an industrial or commercial facility.

### Plastic Ink Bottles

Once bottles are empty of free liquid, dispose of the bottles in the general trash or in a landfill. The ink bottles are made of High-Density Polyethylene (HDPE) plastic as indicated by the recycling number “2”. Check with your local recycler regarding recycling the bottles in your area.

### Health & Safety

Refer to the package label and the Material Safety Data Sheet for health, safety, and handling information on the products referenced in this bulletin. For 3M products, if necessary, you may contact our Toxicology/Product Responsibility Department on 01344 858000.

### Important Notice to Purchaser

The 3M products described in this publication are covered by a 3M warranty and limitation of liability.

3M's warranty provides that if 3M finds that goods are defective in material or workmanship they will be replaced or the price refunded at 3M's option but note that 3M does not accept liability for other direct losses (except for personal injury or death) or consequential losses relating to defective products or from information supplied by 3M.

Purchasers and users of 3M products, and not 3M supplying companies, are always solely responsible for deciding on the suitability of the 3M product for their required or intended use.
