3M™ Tegaderm™ Absorbent Clear Acrylic Dressing

- Transparent dressing allows for wound monitoring without changing the dressing
- Clear design takes the guesswork out of application over the wound
- Novel acrylic polymer pad technology designed to handle low to moderate wound drainage
3M™ Tegaderm™ Absorbent Clear Acrylic Dressing advances 3M™ Tegaderm™ Transparent Film Dressing technology by adding a clear acrylic polymer pad designed to handle low to moderate drainage.

Clearly Different
- Dressing designed not to melt down or leave residue
- Non-bulky design to help prevent dressing roll or lift due to friction from linens, clothing or prosthetics
- Eliminates hydrocolloid odor
- Allows for one-handed placement

Clinically Effective
- Low-friction surface minimizes potential for friction and shear
- Low potential for periwound maceration
- Maintains a moist wound healing environment
- Rated significantly better than the leading hydrocolloid dressing\(^2\)
  - Ability to monitor the wound before and after absorption
  - Conformable before and after absorption
- Superior fluid handling capacity compared to leading hydrocolloid brands\(^3\)

Affordable
- Without lifting or changing the dressing, easily monitor the wound for:
  - Color of drainage
  - Condition of periwound skin
  - Condition of wound bed
- Less frequent dressing changes may save nursing time and supply costs
  - Can be worn until the dressing leaks, loses adhesion or according to facility protocol

Comfortable for Patients
- Less frequent dressing changes reduce the risk of skin trauma
- Allows gentle removal from skin
- Washable — can easily wipe off stool, urine or other contaminants
- Waterproof — allows patients to bathe or shower\(^3\)

Where to use 3M™ Tegaderm™ Absorbent Clear Acrylic Dressing

- Over skin tears and superficial traumatic wounds
- Over pressure-related injuries
- As a primary dressing over Stage II/Stage III low- to moderate-draining pressure ulcers
- As a secondary dressing cover over wounds requiring an absorbent wound filler
- As a primary dressing over skin graft donor sites
- As a primary dressing over surgical wounds
Skin Tears: State of the Science: Consensus statements for the prevention, predication, assessment and treatment of skin tears

Tegaderm™ Absorbent Clear Acrylic Dressings were listed as a successful treatment for categories 1 to 3 skin tears. The dressings were left in place for 21 days, minimal pain was reported upon removal and complete wound closure was seen in all cases.

Skin Tear Treatment

Skin Tears occur when the epidermis separates from the dermis. They are often painful and distressing in appearance. They represent a major problem affecting older adults and many compromised individuals. It is estimated that at least 1.5 million skin tears occur in institutionalized older adults each year, with individual facilities reporting prevalence rates between 14% and 24%.

Cost for 14 Day Wear — Post Acute Care Site of Service
