3M™ Fire Barrier Water Tight Sealants are the first firestopping systems to meet both UL 1479 (ASTM E 814) Firestop tests and UL W-Rating for water tightness when used on floor penetrations. Now you have an all-in-one product solution for water infiltration and fire containment.
Choose the Right Product for Your Need

3M™ Fire Barrier Water Tight Sealants

Achieve the benefits of firestopping and a water tight seal in one application!

- Meets UL Water Leakage Test, W-Rating—Class One requirements for systems tested and listed in accordance with ANSI/UL 1479.
- Provides remarkable adhesion on most construction surfaces, including: concrete, gypsum, metal, plastic, wood and insulation.
- Ideal for the following interior construction voids: blank openings, metallic pipes, non-metallic pipes, cables, cable trays, insulated pipes, busways, HVAC vents and ducts, combos and construction joints.
- Low VOC. Meets the intent of LEED® VOC environmental quality requirements—helps reduce the quantity of indoor air contaminants that may be odorous, irritating and harmful to the comfort and well-being of the installers and occupants. <250 g/L VOC contents (less H₂O and exempt solvents).
- Helps minimize noise transfer (STC Rated).
- CPVC compatible.

3M™ Fire Barrier Water Tight Sealant 3000 WT

High-performance intumescent silicone achieves the benefits of a firestop and water tight seal. The most versatile of the 3M firestop sealants with the most systems of any 3M firestop product.

- Provides up to 4-hour F-Rating.
- Can close up to 3" PVC pipes (open or closed piping systems).
- Remarkable weatherability—ideal for fast-track construction.
- Cures upon exposure to atmospheric humidity.
- Best for non-metal horizontal or vertical penetrations and bottom of wall construction joints.
- Meets ASTM G 21 standard practice for determining resistance of synthetic polymeric materials to fungi.
- Minimizes noise transfer (STC-Rating of 56 when tested in STC 56-rated wall assembly).

3M™ Fire Barrier Water Tight Sealant 1000 NS

Non-slumping silicone with up to 3-hour fire protection.

- Best for wall or vertical applications.
- Remarkable weatherability.
- Cures upon exposure to atmospheric humidity.
- Minimizes noise transfer (STC-Rating of 56 when tested in STC 56-rated wall assembly).
- For dynamic and static construction joints (compression/extension capability of ±31%).

3M™ Fire Barrier Water Tight Sealant 1003 SL

Self-leveling silicone with up to 3-hour fire protection.

- Best for floor penetrations and horizontal applications.
- Remarkable weatherability.
- Cures upon exposure to atmospheric humidity.
- Chemically compatible with CPVC piping systems.
- Minimizes noise transfer (STC-Rating of 56 when tested in STC 56-rated wall assembly).
- For dynamic and static construction joints (compression/extension capability of ±31%).

*UL water leakage test
An addition was being built above a five-story wing of Lee Memorial Health System’s HealthPark Medical Center in Fort Meyers, Florida. Crews were constructing three new stories as part of an expansion project that would add 122 beds and 239,000 more square feet to the hospital.

Water leakage during building construction is not a new problem, as 3M had recognized after hearing customers continually voice concerns. To address the issue, 3M approached Underwriters Laboratories (UL) and formed an industry roundtable to determine the best method to stop water leakage in floor penetrations. The result was Underwriters Laboratories developing the W-Rating—Class One requirements for water tightness in firestop sealants when used on floor penetrations. The new W-Rating had just recently been approved when Benetatos asked 3M for help. When he learned that the 3M™ Fire Barrier Water Tight Silicone Sealants were the first firestop systems to pass the new rating, he acted on the information quickly to get the job done to beat Charley.

“Everyone was pleased with how the 3M Sealants Cured, Set Up & Performed.”

3M provided the quality and reliability necessary in a critical situation such as the one HealthPark Medical Center was facing. The 3M™ Fire Barrier Water Tight Sealants were the first firestop systems to pass the new W-Rating. It was this progressive product development that made 3M™ Fire Barrier Water Tight Sealant the first choice of the HealthPark Medical Center team.

The results were a testimony to the quality of the 3M™ Fire Barrier Water Tight Sealants. The fast-acting properties allowed the product to cure in time to save the HealthPark Medical Center from what could have been extensive water damage.

Everyone was pleased with how the 3M Sealants Cured, Set Up & Performed.”

“Everyone was pleased with how the 3M Sealants Cured, Set Up & Performed.”

job just two hours before Charley hit—enough time for the product to set and cure.

When the storm swept through, more than seven inches of rain fell within three days, causing an estimated $14 billion in damage throughout Florida. For HealthPark Medical Center, however, the damage was minimal.

“We were impressed with the product’s ability to dry quickly,” said Benetatos. “It saved us time and money, and in the long run, it saved our customer money. There was some wind damage to the roof and the construction equipment. Water got into the building but was held back by the sealants,” he continued. “Everyone was pleased with how the 3M sealants cured, set up and performed. There wasn’t one leak, even after Charley.”
