ControlRx®

**Rx only.**

**Purpose**

Toothpaste containing 1.1% Neutral Sodium Fluoride (5000 ppm F) and MICRODENT® SootheRx.

**Actions**

Fluoride is a naturally occurring mineral that hardens teeth and prevents decay. MICRODENT® SootheRx provides rapid and continual relief from tooth hypersensitivity due to cold, heat, acids, sweets, or confectionery products. Use in areas where drinking water is fluoridated at levels above 0.4 ppm.

**Usage Instructions:**

1. Wet the head of a soft-bristled toothbrush, and apply a ribbon of SootheRx to the toothbrush. Allow brushing through the toothpaste, but do not apply the toothbrush to the gums. Apply SootheRx in the usual manner, preferably before bedtime. Children age 6 years and under should only use pea-size amounts when supervised by a dental professional.

2. Use the SootheRx twice daily for the first two (2) weeks, in place of your regular toothpaste.

**Contraindications:**

- None known.

**Overdosage:**

Ingestion of a normal dosage is not harmful. If less than 5 mg fluoride/kg body weight (i.e., 1 mg fluoride/lb body weight) have been ingested, induce vomiting, give orally soluble calcium (e.g., milk, 5% calcium gluconate or calcium carbonate, 30 ml/kg body weight). If the ingestion is over 5 mg fluoride/kg body weight (i.e., 1 mg fluoride/lb body weight) have been ingested, induce vomiting, give orally soluble calcium (e.g., milk, 5% calcium gluconate or calcium carbonate, 30 ml/kg body weight).

**Precautions:**

- Do not apply to gums.
- Do not use on children under 6 years of age unless under the supervision of a dental professional. Use only as directed by the dental professional.

**ControlRx®

**Purpose**

Toothpaste containing 0.63% Stannous Fluoride for use in caries prevention and plaque reduction.

**Usage Instructions:**

1. For patients having coexisting gingivitis and periodontitis, the presence or absence of gingival inflammation following treatment with Peridex Oral Rinse should not be used as a major indicator of underlying periodontitis.

2. Peridex Oral Rinse therapy should be initiated directly following a dental prophylaxis. Patients required to complete the prophylaxis. Discretion should be used when prescribing to patients with recent periodontal surgery due to the increased risk of accumulation of unremoved plaque.

3. Stain resulting from use of Peridex Oral Rinse does not obscure subsequent oral examinations. Intraoral photographs can be obtained after use.

**Warnings:**

- For 0.63% Stannous Fluoride Oral Care Rinse

**DOSAGE AND ADMINISTRATION:**

**INDICATIONS:**

- Control of gingivitis and periodontitis

**CONTRAINdications:**

- None known.

**ADVERSE REACTIONS:**

- Some patients may experience an alteration in taste perception while undergoing treatment with Peridex Oral Rinse. The safety and efficacy of Peridex Oral Rinse have been reported via post-marketing product surveillance.

**PRECAUTIONS:**

- None known.

**PERIDEX Chlorhexidine Gluconate 0.12% Oral Rinse**

**INDICATIONS**

Peridex Oral Rinse is indicated for use between dental visits as part of a professional program for the control and management of gingivitis and periodontitis, and as an aid in preventing gingival bleeding upon probing. Peridex Oral Rinse has not been tested among patients with HIV infection (AIDS) for plaque and gingivitis control. Peridex Oral Rinse may cause some patients to experience a metallic or bitter taste. This drug should be used during pregnancy if daily dental hygiene is needed.

**ADVERSE REACTIONS:**

- Some patients may experience an alteration in taste perception while undergoing treatment with Peridex Oral Rinse. The safety and efficacy of Peridex Oral Rinse have been reported via post-marketing product surveillance.
