You’ll see a treatment ... They’ll see a toothpaste.

Clinpro™ 5000
1.1% Sodium Fluoride Anti-Cavity Toothpaste

Summary of advantages

• Strengthens teeth and repairs early lesions
• Proven remineralization throughout the lesion
• Contains 1.1% NaF (5000 ppm fluoride ion) and an innovative calcium and phosphate ingredient
• Low abrasion
• Proven through 5 years of clinical usage
• Convenient 4 oz. flip-top tube lasts 6 months

Switch them to a clinically proven prescription-strength toothpaste ... without changing their routine.

When patients are at moderate to high risk for developing caries, patient compliance can be tough. Fortunately, 3M offers an advanced treatment that is easy for anyone to use.

Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste is a clinically proven prescription-strength formula containing our functionalized tri-calcium phosphate (fTCP) ingredient and is available exclusively from 3M. It contains fluoride as well as calcium and phosphate, which are components naturally found in saliva.

• Helps prevent and repair early lesions by remineralizing throughout the lesion—not just on the surface
• Optimized pH aids remineralization
• Creates acid-resistant mineral in dentin tubules*
• One-step convenience improves patient compliance—patients simply switch to Clinpro 5000 toothpaste for their brushing regimen

Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste is an advanced formula containing functionalized tri-calcium phosphate (fTCP) that is available exclusively from 3M. It contains fluoride as well as calcium and phosphate, components naturally found in saliva. The formulation successfully integrates these ingredients in a way that enhances their performance, allowing the tooth to naturally absorb these components so remineralization can occur.

**HIGHLIGHTS OF PRESCRIBING INFORMATION**

**INDICATIONS AND USAGE**

Clinpro 5000 Anti-Cavity Toothpaste is indicated for use as part of a professional program for the prevention and control of dental caries.

**DOSE AND ADMINISTRATION**

- Use once daily in place of conventional toothpaste unless instructed otherwise by a physician or dentist.
- Apply a thin ribbon or pea-sized amount of Clinpro 5000 Anti-Cavity Toothpaste using a soft-bristled toothbrush and brush teeth for at least two minutes.
- After brushing, adults should expectorate. Children 6 to 16 years of age should expectorate and rinse mouth thoroughly with water.

**DOSE FORMS AND STRENGTHS**

White toothpaste containing 1.1% sodium fluoride

**CONTRAINDICATIONS**

Do not use in children under 6 years of age unless recommended by a dentist or physician.

**WARNINGS AND PRECAUTIONS**

- Do not use in children under 6 years of age unless recommended by a dentist or physician.
- Keep out of reach of children under 6 years of age.
- Repeated ingestion of high levels of fluoride may cause dental fluorosis.

**ADVERSE REACTIONS**

Allergic reactions and other idiosyncrasies have been rarely reported.

To report SUSPECTED ADVERSE REACTIONS, contact 3M ESPE Dental Products Division at 1-800-634-2249 or www.3MESPE.com, or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

**USE IN SPECIFIC POPULATIONS**

**Pregnancy**

Prescribing physicians and dentists should consider total fluoride exposure (dental care plus food, water and other sources) when prescribing the product for use in pregnant women or who may become pregnant.

**Nursing Mothers**

Prescribing physicians and dentists should consider total fluoride exposure (dental care plus food, water and other sources) when prescribing the product for use in women who are nursing.

**Pediatric Use**

The primary adverse effects of fluoride are fluorosis of dental enamel and of the skeleton; these effects occur at exposures below those associated with other adverse health effects. The population most at risk for dental fluorosis is children during the period of tooth formation, i.e. from birth to 8 years of age. For this population, the Institute of Medicine (IOM) established Fluoride Upper Limits of intake based on the risk of dental fluorosis. In populations with permanent dentition, skeletal fluorosis is the greatest risk from excessive fluoride. For this population the Institute of Medicine established Fluoride Upper Limits based on the risk of skeletal fluorosis.

**Population**

- Infants 0-6 months old: 0.7 mg/kg/day
- Infants 7-12 months old: 0.9 mg/kg/day
- Children 1-3 years old: 1.3 mg/kg/day
- Children 4-8 years old: 2.2 mg/kg/day
- Children > 8 years old: 10 mg/kg/day

**Ingested fluoride dose**

- Less than 5 mg/kg
- 5 mg/kg or more

**Amount for 10kg (22 pound) child**

- This equals less than ½ ounce (or less than 3 teaspoons)
- This equals about ½ ounce (about 1 tablespoon) or more

**Treatment for Overdose of Clinpro 5000 Toothpaste**

- Ingested fluoride dose
- Amount for 10kg (22 pound) child
- Recommended action to take

- Less than 5 mg/kg
- 5 mg/kg or more

- This equals less than ½ ounce (or less than 3 teaspoons)
- This equals about ½ ounce (about 1 tablespoon) or more

- Give 1-2 glasses of milk and seek medical attention or contact a poison control center.

- Do not induce vomiting. Give 1-2 glasses of milk and seek medical attention or contact a poison control center.

- Seek immediate medical attention. Do not induce vomiting. Give 1-2 glasses of milk.

*The amount to reach the fluoride dose will be proportionately larger with older children and adults. A thin ribbon or pea-sized amount of Clinpro 5000 Anti-Cavity Toothpaste weighs approximately 0.3 g and contains approximately 1.5 mg of fluoride ion. A 4 oz. tube contains 564 mg of fluoride ion.

2. Storage

This product is designed to be stored and used at room temperature. Do not freeze or expose to extreme heat. See outer package for expiration date.

Manufactured for: 3M ESPE
