Clinpro™ 5000
1.1% Sodium Fluoride
Anti-Cavity Toothpaste

You’ll see a treatment ...
They’ll see a toothpaste.

With Functionalized Tri-Calcium Phosphate
Exclusively from 3M
Switch them to a proven formula that strengthens and repairs—without changing their routine.

Patients who are at a moderate to high risk for caries are in need of preventive treatment—however, patient compliance can be a concern. When you prescribe Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste with TCP from 3M, you are providing a prescription-strength formulation that’s easy for anyone to use. It delivers more fluoride than over-the-counter toothpastes to help strengthen and repair enamel—and is backed by over five years of clinical usage. Plus, it’s as easy to apply as brushing your teeth.

**Summary of key advantages**

- Strengthens teeth and repairs early lesions
- Proven remineralization throughout the lesion
- Optimized pH aids remineralization
- Creates acid-resistant mineral in dentin tubules**
- Contains 1.1% NaF (5000 ppm fluoride ion) and an innovative calcium and phosphate ingredient
**Prescription strength ... patient friendly.**

**One-step compliance:** Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste simply replaces the patient’s current brushing regimen.

**Low abrasion:** It’s comfortable for patients to use—even those with exposed root surfaces.

**Convenient 4oz tube:** Lasts six months, so it’s easy to renew at each appointment.

**Three great flavors:** Vanilla Mint, Spearmint and Bubble Gum.

---

**fTCP ingredient: A source of calcium and phosphate.**

Clinpro 5000 toothpaste is an advanced formula containing functionalized tri-calcium phosphate (fTCP) that is available exclusively from 3M. It contains fluoride as well as calcium and phosphate, components naturally found in saliva. The formulation successfully integrates these ingredients in a way that enhances their performance, allowing the tooth to naturally absorb these components so remineralization can occur.

---

**Protects against lesion progression**

Clinpro 5000 toothpaste delivers strong protection against lesion initiation and progression by delivering high-quality mineral throughout the lesion—not just at the surface—to help prevent mineral loss.

**Remineralizes enamel to help repair early lesions**

Clinpro 5000 toothpaste is proven to remineralize throughout the body of early lesions, resulting in smaller and less severe lesions after treatment.

---

**Prevents Mineral Loss**

![Graph showing prevention of mineral loss](image)

**Reduces Lesion Size**

Clinpro™ 5000
1.1% Sodium Fluoride Anti-Cavity Toothpaste

HIGHLIGHTS OF PRESCRIBING INFORMATION
INDICATIONS AND USAGE
Clinpro 5000 Anti-Cavity Toothpaste is indicated for use as part of a professional program for the prevention and control of dental caries.

DOSEDAGE AND ADMINISTRATION
• Use once daily in place of conventional toothpaste unless instructed otherwise by a physician or dentist.
• Apply a thin ribbon or pea-sized amount of Clinpro 5000 Anti-Cavity Toothpaste using a soft-bristled toothbrush and brush teeth for at least two minutes.
• After brushing, adults should expectorate. Children 6 to 16 years of age should expectorate and rinse mouth thoroughly with water.

DOSEDAGE FORMS AND STRENGTHS
White toothpaste containing 1.1% sodium fluoride

CONTRAINDICATIONS
Do not use in children under 6 years of age unless recommended by a dentist or physician.

WARNINGS AND PRECAUTIONS
• Do not swallow.
• Keep out of reach of children under 6 years of age.
• Repeated ingestion of high levels of fluoride may cause dental fluorosis.

ADVERSE REACTIONS
Allergic reactions and other idiosyncrasies have been rarely reported.

To report SUSPECTED ADVERSE REACTIONS, contact 3M ESPE Dental Products Division at 1-800-634-2249 or www.3MESPE.com, or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

DOSAGE FORMS AND STRENGTHS

USE IN SPECIFIC POPULATIONS
Pregnancy
Prescribing physicians and dentists should consider total fluoride exposure (dental care plus food, water and other sources) when prescribing the product for use in pregnant women or women who may become pregnant.

Nursing Mothers
Prescribing physicians and dentists should consider total fluoride exposure (dental care plus food, water and other sources) when prescribing the product for use in women who are nursing.

Pediatric Use
The primary adverse effects of fluoride are fluorosis of dental enamel and of the skeleton; these effects occur at exposures below those associated with other adverse health effects. The population most at risk for dental fluorosis is children during the period of tooth formation, i.e. from birth to 8 years of age. For this population, the Institute of Medicine (IOM) established Fluoride Upper Limits of intake based on the risk of dental fluorosis. In populations with permanent dentition, skeletal fluorosis is the greatest risk from excessive fluoride. For this population the Institute of Medicine established Fluoride Upper Limits based on the risk of skeletal fluorosis:

Population
Infants 0-6 months old 0.07 mg/day
Infants 7-12 months old 0.08 mg/day
Children 1-3 years old 0.13 mg/day
Children 4-8 years old 0.22 mg/day
Children > 8 years old 0.30 mg/day

Prescribing physicians and dentists should consider total fluoride exposure (dental care plus food, water and other sources) when prescribing the product for use in children.

Geriatric Use
No studies of Clinpro 5000 Anti-Cavity Toothpaste have been conducted to determine whether subjects aged 65 and over respond differently from younger subjects.

OVERDOSAGE
Ingestion of large amounts of fluoride may result in abdominal pain, stomach upset, nausea, vomiting and diarrhea. These symptoms may occur at overdoses of 5 mg/kg of body weight. Fluoride doses of 16 mg/kg have been fatal.

Ingested fluoride dose
Less than 5 mg/kg
5 mg/kg or more

Treatment for Overdose of Clinpro 5000 Toothpaste

Amount for 10 kg (22 pound) child
This equals less than ½ ounce (or less than 3 teaspoons)
This equals about ½ ounce (about 1 tablespoon) or more.

Recommended action to take
Do not induce vomiting. Give 1-2 glasses of milk and observe for symptoms of stomach upset. If symptoms persist more than a few hours, seek medical attention or contact a poison control center.

Dosage and Administration
Clinpro 5000 Anti-Cavity Toothpaste is indicated for use as part of a professional program for the prevention and control of dental caries.

Do not use in children under 6 years of age unless recommended by a dentist or physician.

Contraindications
Do not use in children under 6 years of age unless recommended by a dentist or physician.

Warnings and Precautions
• Do not swallow.
• Keep out of reach of children under 6 years of age.
• Repeated ingestion of high levels of fluoride may cause dental fluorosis.

Adverse Reactions
Allergic reactions and other idiosyncrasies have been rarely reported.

To report suspected adverse reactions, contact 3M ESPE Dental Products Division at 1-800-634-2249 or www.3MESPE.com, or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.
