### Stage I Pressure Ulcer
- Intact skin with non-blanchable redness of a localized area usually over a bony prominence. Darkly pigmented skin may not have visible blanching; its color may differ from the surrounding area.*

### Stage II Pressure Ulcer
- Partial thickness loss of dermis presenting as a shallow open ulcer with a red pink wound bed, without slough. May also present as an intact or open/ruptured serum-filled blister.*

### Stage III/IV Pressure Ulcer
- Stage III: Full thickness tissue loss. Subcutaneous fat may be visible but bone, tendon or muscle are not exposed. Slough may be present but does not obscure the depth of the tissue loss. May include undermining and tunneling.*
- Stage IV: Full thickness tissue loss with exposed bone, tendon, or muscle. Slough or eschar may be present on some parts of the wound bed. Often includes undermining and tunneling.*

### Unstageable Pressure Ulcer
- Full thickness tissue loss in which the base of the ulcer is covered by slough (yellow, tan, gray, green or brown) and/or eschar (tan, brown or black) in the wound bed.*

### Suspected Deep Tissue Injury
- Purple or maroon localized area of discolored intact skin or blood-filled blister due to damage of underlying soft tissue from pressure and/or shear. The area may be preceded by tissue that is painful, firm, mushy, boggy, warmer or cooler as compared to adjacent tissue.*

### Clean
- 3M™ Cavilon™ No-Rinse Skin Cleanser

### Protect
- 3M™ Cavilon™ No Sting Barrier Film

### Cover
- 3M™ Tegaderm™ Transparent Film Dressing

### Clean
- 3M™ Wound Cleanser

### Protect
- 3M™ Cavilon™ No Sting Barrier Film

### Cover
- Non-Draining to Minimal Drainage
  - 3M™ Tegaderm™ Transparent Film Dressing
- Minimal to Moderate Drainage
  - 3M™ Tegaderm™ Absorbent Clear Acrylic Dressing
  - 3M™ Tegaderm™ Hydrocolloid Dressing
  - 3M™ Tegaderm™ High Performance Foam Non-Adhesive Dressing
  - 3M™ Tegaderm™ High Performance Foam Adhesive Dressing
  - 3M™ Tegaderm™ Silicone Foam Border Dressing
- Moderate to Heavy Drainage
  - 3M™ Tegaderm™ Absorbent Clear Acrylic Dressing
  - 3M™ Tegaderm™ Hydrocolloid Dressing
  - 3M™ Tegaderm™ High Performance Foam Non-Adhesive Dressing
  - 3M™ Tegaderm™ High Performance Foam Adhesive Dressing
  - 3M™ Tegaderm™ Silicone Foam Border Dressing
- Sacral Ulcer
  - 3M™ Tegaderm™ Absorbent Clear Acrylic Dressing, Sacral Design
  - 3M™ Tegaderm™ Hydrocolloid Dressing, Sacral Design

### Clean
- 3M™ Wound Cleanser

### Protect
- 3M™ Cavilon™ No Sting Barrier Film

### Fill
- Non-Draining to Minimal Drainage
  - 3M™ Tegaderm™ Hydrogel Wound Filler
- Moderate to Heavy Drainage
  - 3M™ Tegaderm™ Alginate Dressing

### Cover
- Non-Draining to Minimal Drainage
  - 3M™ Tegaderm™ +Pad Film Dressing with Non-Adherent Pad
  - 3M™ Medipore™ +Pad Soft Cloth Adhesive Wound Dressing
- Minimal to Moderate Drainage with Minimal Depth
  - 3M™ Tegaderm™ Absorbent Clear Acrylic Dressing
  - 3M™ Tegaderm™ Hydrocolloid Dressing
  - 3M™ Tegaderm™ High Performance Foam Non-Adhesive Dressing
  - 3M™ Tegaderm™ High Performance Foam Adhesive Dressing
  - 3M™ Tegaderm™ Silicone Foam Border Dressing
- Moderate to Heavy Drainage
  - 3M™ Tegaderm™ High Performance Foam Non-Adhesive Dressing
  - 3M™ Tegaderm™ High Performance Foam Adhesive Dressing
  - 3M™ Tegaderm™ Silicone Foam Border Dressing
  - 3M™ Tegaderm™ Superabsorber Dressing

### Clean
- 3M™ Wound Cleanser

### Protect
- 3M™ Cavilon™ No Sting Barrier Film

### Cover
- See cover dressing choices noted under Stage III/IV for management of exudate level

### Note
- Debridement of ulcers with devitalized tissue is necessary. Notify MD/Wound Consultant for debridement options
- Stable (dry, adherent, intact without erythema or fluctuance) eschar on the heels serves as "the body's natural (biological) cover" and should not be removed

<tbody>
<tr>
<td>A skin tear is a traumatic wound that results in separation of the epidermis from the dermis. It can be partial thickness or full thickness, usually due to friction and/or shear forces.</td>
<td>Lower extremity venous leg ulcers are caused by chronic venous hypertension. Failure of valves in the veins or faulty calf muscle pump action in the legs results in inadequate fluid return from the legs. Fluid extravasation, tissue ischemia and, eventually, ulceration is the common course of this condition.</td>
<td>Lower extremity arterial ulcers are caused by lower extremity vascular arterial disease.</td>
<td>Neuropathic ulcers result from neurologic and musculoskeletal changes leading to a lack of protective sensation and altered weight-bearing. Tissue damage most often results from trauma and/or repetitive pressure. Inadequate arterial perfusion may also be a factor.</td>
<td>A chronic wound does not heal in a timely, orderly process. Stalled in a phase of healing. Failed to heal in 4-6 weeks with standard wound care protocol.</td>
