Adhesive Solutions

Adper™ Easy One
Self-Etch Adhesive

One for all
Adper™ Easy One Self-Etch Adhesive is a simple one component, one coat, self-etch adhesive solution. In addition to being fast and easy to use, Adper Easy One adhesive offers:

- Strong and consistent bond performance
- Virtually no post-operative sensitivity
- Shorter application time (35 seconds) for less risk of contamination
- Self-etch with selective enamel etch option
- Moisture tolerance – it works on moist or dry enamel or dentine

One coat.

Strong and consistent bonding results on dentine and enamel

Two main factors combine to give Adper™ Easy One Self-Etch Adhesive excellent bond strength:
First, 3M ESPE’s unique filler technology.
Second, the adhesive formula with the Vitrebond™ Co-Polymer:

- Increases resistance to changes in humidity
- Creates a solid thin surface film
- Makes Adper Easy One technique-tolerant

One component – multiple advantages

Virtually no post-operative sensitivity

In a field evaluation of more than 5,000 restorations placed using Adper™ Easy One adhesive, less than 0.5% reported post-operative sensitivity.*

Get excellent results – fast

With Adper™ Easy One Self-Etch Adhesive you are just one step away from a strong, reliable bond to dentine and enamel. No mixing or shaking necessary. Discover this new grade of convenience and you will agree: bonding has never been simpler or faster.
With or without etching – it’s your choice!

With a selective enamel etch step you get:
- Significantly higher bond strength to enamel
- Unchanged bond strength to dentine, even if inadvertently etched
- More versatile use, e.g. on uncut enamel

Without etching Adper™ Easy One is:
- Ultra-simple and fast, but still strong
- Technique tolerant and forgiving
- Convenient for the patient with virtually no post-op sensitivities

Moisture tolerance

Adper™ Easy One Self-Etch Adhesive is insensitive to moist or dry surfaces.

Put it to the test in our bonding duel!

Not yet convinced? Then we invite you to dare to engage in a direct competition: Test the bonding strength of your preferred adhesive and Adper Easy One by means of a prepared tooth model. These bonding duels take place at 3M ESPE events in several cities. Quite a number of dentists have already taken the challenge and most have been very impressed. If you want to join in, here's how: www.sample.com

“I'm still familiar with the established school of thought that the best result will be obtained with the individual steps of conditioning, priming and bonding ... At its presentation, 3M ESPE succeeded in proving the opposite.”

Dr. Miriam Basel, Zirndorf
Source: Spectator Dentistry, 5 (5), May 2010

“I find it remarkable that at the first go Adper™ Easy One gives better results than the adhesive I am familiar with. The consistency of the results has also convinced me ...”

Dr. Wolfgang Freude, Nuremberg
