YOU AND 3M – EXPERTS EVERY STEP OF THE WAY
Prevent pinholes. Due to the sealed environment of the Dynamic Mixing Nozzle, no air infiltrates the mixing of filler and hardener giving a high-quality finish.

Reduce waste. By taking the applicator to the job and mixing “filler-on-demand”, you don’t lose what you don’t use.

Enhance productivity. There’s no scooping, mixing or cleaning up and a faster finish with no pinholes means a coat of filler could be eliminated.

Less mess. 3M’s enclosed system ensures that your hands stay clean, your work area stays clean – and the vehicle stays clean.

The Applicator
Powered by your bodyshop’s pneumatic air system, this easy-to-use, ergonomically styled device is always ready to dispense mixed filler-on-demand. Its durable construction is built to last long and stand up to heavy-duty performance, day in, day out.

Ensure that you have all necessary safety equipment

Ensure that the air regulator on the Dynamic Mixing System Applicator 50600 is fully closed (anti clockwise)

Pull the trigger to automatically mix and dispense the perfect amount of filler and hardener. Apply straight to the job, using only the amount you need and spread

Disconnect the Dynamic Mixing System Applicator 50600 from the air line and release the Premium Body Filler 50597/50598 with the Dynamic Mixing System Nozzle 50601 in place. Return applicator to Dynamic Mixing System Applicator Rack 50603.
Stop mixing.

Start fixing.

**The Mixing Nozzles**
Get the perfect mix ratio everytime! The innovative mixing nozzle prevents over-catalysation by blending a fixed filler to hardener ratio, eliminating instances of staining. And since no air is introduced in the cartridge or while the components are being mixed in the nozzle, significant pinholes in the final finish are prevented.

**The Cartridges**
This filler on demand system reduces traditional filler waste – simply take the applicator to the car and use just the amount you need. With an easy-to-read gauge, you know exactly how much body filler has been applied and how much is left in the cartridge for reuse.

**Premium Body Filler**
Premium Body Filler 50597 is available for colder conditions or smaller repairs, where a quick-curing filler is demanded. Alternatively, Premium Body Filler 50598 is available for warmer conditions or when more work time is required for larger repairs. Whichever formulation is used you can be confident of a sag-free, high quality repair with excellent sandability.

---

Remove sealing cap from Premium Body Filler (50597/50598). Attach Dynamic Mixing System Nozzle 50601.

Align the Premium Body Filler (50597/50598) with the Dynamic Mixing System Applicator and twist into place.

Turn the Dynamic Mixing System Applicator 50600 air regulator 2.5-3 turns clockwise (from a closed position).
