Filtek™ Bulk Fill
Flowable Restorative

The bulk fill flowable that’s fast AND strong.
The bulk fill flowable that reduces procedure times without reducing your confidence.

With the trend toward faster and easier procedures, dentists are using bulk fill flowable restoratives in the posterior region—where 70% of restorations occur. Despite the significant time-savings gained with bulk placement, dentists are still concerned about completeness of cure, shrinkage stress and strength.

Filtek™ Bulk Fill Flowable Restorative is replacing concerns ... with confidence.

It’s been developed by 3M ESPE, one of the most trusted innovators of restorative solutions, to address the challenges of bulk placement, from start to finish.

**Summary of advantages**

- Up to 50% stronger than the leading bulk fill flowable\(^1\)
- Nearly twice the wear resistance of leading bulk fill flowables\(^2\)
- Choice of deliveries: easy-to-use capsules or syringes
- Orange color is easy to identify—and ask for
- 4 Shades: A1, A2, A3, Universal

1. Compared to SureFil SDR Flow.

Its flowable viscosity provides easy adaptation.

You want a bulk fill flowable to adapt easily, eliminating the chance for voids and providing a good marginal seal. But if it’s too fluid, it can flow out of place before you can cure it. In a simulated operatory, dentists comparing the leading bulk fill flowables gave Filtek Bulk Fill Flowable Restorative excellent marks for the way it handles and adapts to the cavosurface—with little or no instrumentation.

You can be confident in the depth of cure.

**Depth of Cure**

Per ISO 4049, the recommended depth of cure can be no greater than 0.5 mm above the determined value.

Source: 3M ESPE internal data.
A fast, easy 4 mm placement reduces steps and chair time.

One way dentists manage shrinkage stress is by layering the composite in small increments—which is time-consuming and can increase risk of contamination.

Filtek Bulk Fill Flowable Restorative offers a faster, easier solution. With less shrinkage stress than many traditional flowable and universal composites, it can be placed in one 4 mm increment.

Here’s why you can trust Filtek Bulk Fill Flowable Restorative to last:

Any restorative used in posterior teeth should be strong and wear resistant. Filtek Bulk Fill Flowable Restorative contributes to the overall restoration by offering these distinct advantages.

- **Up to 50% stronger** than the leading bulk fill flowable¹
- **Nearly twice the wear resistance** of leading bulk fill flowables²

It’s the only bulk fill flowable strong enough to be called Filtek™.

![Low shrinkage stress](image)

The shrinkage stress generated by placing a 4 mm increment of Filtek™ Bulk Fill Flowable Restorative is in the same range, or lower than, the stress generated by two 2 mm increments of many traditional flowable or universal composites.

Choose Filtek™ Bulk Fill Flowable Restorative for fast and simple posterior restorations.

1. Prepare the tooth and apply adhesive.
2. Dispense up to 4 mm of Filtek™ Bulk Fill Flowable Restorative into the prepared cavity and cure.
3. Place a 2 mm (minimum) capping layer of an esthetic composite, such as a Filtek™ universal restorative, and cure.
