3M™ ESPE™
Retraction Capsule

Extra-fine tip
for easy access to the sulcus.

Summary of advantages

- Enables a clean, dry sulcus and robust dental hemostasis
- Effectively opens the sulcus
- Hygienic unit-dose capsule

Versus dental retraction cords:
- Convenient and time-saving retraction process: 50% faster
- Lower risk of hemorrhage after removal
- Gentle on tissue for improved patient comfort

Versus competing pastes:
- Easy access into the sulcus
- Better interproximal access due to capsule’s extra-fine tip
- Compatible with most composite dispensers

Patented design for easier, more effective retraction.

Unlike gingival retraction cords that can be difficult and time-consuming to place, the 3M™ ESPE™ Retraction Capsule is a fast, convenient and effective solution for gingival retraction. With its extra-fine tip, the 3M ESPE Retraction Capsule delivers a 15% aluminum chloride astringent paste right into the sulcus, pushing the gingival tissue away from the tooth and allowing you to capture a detailed impression of the preparation margin.

The 3M ESPE extra-fine tip fits directly into the sulcus.

The orientation ring corresponds in size and position to the perio probe, making for precise and easy intraoral handling.

Easy sulcus access and opening

Soft-edge capsule tip
Long, slim nozzle with an orientation ring

Easy extrusion of high-viscous paste

Optimized capsule geometry

Attaches securely to most composite dispensers

Clamp mechanism
How to use the 3M™ ESPE™ Retraction Capsule
Simple steps to a clean and dry working field.

Indications
3M ESPE retraction capsule is indicated for the temporary tissue retraction of the marginal gingiva to provide a dry sulcus when the periodontium is healthy, such as:

- Taking impressions (material-based or digital)
- Preparation of temporary casts
- Preparation of Class II and V fillings

The product must not be used in patients suffering from a diseased periodontium, open furcations or exposed bone.

1 The 3M™ ESPE™ Retraction Capsule fits most composite dispensers. Extrude a small amount of paste and discard.

2 Insert retraction capsule tip into the sulcus. The tissue is mechanically retracted.

3 Slowly and steadily, inject astringent retraction paste into sulcus. Completely fill the sulcus.

4 OPTIONAL: PROCEDURE WITH CORDS For greater gingival deflection, the astringent retraction paste can be used in combination with retraction cords.

5 Leave astringent retraction paste on for a minimum of 2 minutes.

6 Completely remove astringent retraction paste with air-water spray and suction.
