
*Mixing nozzles, adhesive sealant and accelerator sold separately. See back page for details and ordering information.

**IMPORTANT:** The 3M™ Two-Component Sealant Accelerator System must be used with 3M Accelerator AC61 and 350 ml 3M Adhesive Sealant packs ONLY!

### Loading Instructions:

**Step 1**
Load Adhesive Sealant and Accelerator packs in applicator.

**Step 2**
With metal clips pointing as shown, carefully make small (1/16 in) slit near center of accelerator pack. Slit on sealant pack to be approximately 1/4 in long in the location indicated. **NOTE:** Making a small slit near the center of the accelerator pack is an important factor to prevent leaking.

**Step 3**
Place Disposable Manifold over sausage packs and into applicator tubes.

**Step 4**
Pivot Front Plate into position shown. Dispense until both the sealant and accelerator just begin to flow from the manifold orifice.

**Step 5**
Wipe off excess material, attach Static Mixer.

**Step 6**
Dispense and discard approximately 10 grams of material (4 seconds) before applying to substrates to be sealed or bonded.

**Step 7**
Adjust internal air pressure regulator for desired flow rate for dispensing.

**Step 8**
Make sure Front Plate is in position.

**NOTE:** Never attempt to operate the dispenser before Front Plate is fully aligned and engaged with manifold. Adhesive Sealant with Accelerator will begin to cure in mixing nozzle and should be dispensed continuously. If the sealant and accelerator are allowed to remain in the mixing nozzle for more than 2 1/2 minutes without dispensing, a new nozzle must be used.

**IMPORTANT:** Read User’s Manual included with the 3M™ Two-Component Adhesive Sealant Applicator 400A-2K (62-9890-9990-8) for complete instructions and safety information.
