Size guide

Visit our website at www.3m.co.uk/comfortzone or email ip.uk@mmm.com for further information
The 3M basic surgical gown has been developed as a cost-effective choice for surgical procedures where low levels of fluid are expected. It is available in a range of sizes in a standard design only, suitable for short, low-linting procedures. The basic gown is provided in two hand levels (25cm x 45cm) in a pack.

**Protection**
- Fluid repellent
- Good strength characteristics
- Low linting
- Ultrasonic bonded seams
- Overlapping back
- For procedures with low fluid levels

**Recommended procedures for the 3M Basic Surgical Gown**
- Obstetrics - examination
- Urology
- Maxillofacial
- Low fluid surgery
- ENT
- Cardiothoracic
- Cardiac
- Major orthopaedic - total hip, total knee, arthroscopy

The 3M comfort surgical gown offers a high level of comfort without compromising protection. The material used for the comfort gown is designed to be lightweight which can help the wearer to remain cool during surgical procedures. It is available in both standard and reinforced designs. The comfort gown is provided in an outer wrap with two hand levels (25cm x 45cm) and is packed in a peel-open pouch.

**Protection**
- Resistant to blood, alcohol and other fluids under normal conditions
- Good strength characteristics
- Low linting
- Ultrasonic bonded isolated sleeve seams
- Overlapping back
- Lightweight and comfortable
- Robust design
- Adjustable neckline
- Available in both standard and reinforced designs

**Recommended procedures for the 3M Comfort Surgical Gown**
- Obstetrics - C-section
- Urology
- Gynaecology
- Low fluid surgery
- ENT
- Cardiothoracic
- Major orthopaedic - total hip, total knee, arthroscopy

The 3M high protection surgical gown offers optimal patient and wearer protection. It performs under pressure, providing a barrier to the transfer of microorganisms and body fluids from the surgical gown. It is available in both standard and reinforced designs. The reinforced design provides additional wearer protection for high fluid procedures with reinforced panels on both the chest and sleeve areas.

**Protection**
- Fluid repellent
- Good strength characteristics
- Low linting
- Ultrasonic bonded seams
- Overlapping back
- Lightweight and comfortable
- Robust design
- Adjustable neckline
- Standard and reinforced designs

**Recommended procedures for the 3M High Protection Surgical Gown**
- Obstetrics - C-section
- Urology
- Gynaecology
- Low fluid surgery
- ENT
- Cardiothoracic
- Major orthopaedic - total hip, total knee, arthroscopy

The gown is made of 30g/m² SMS (Spunbond/Meltblown/Meltblown) Spunbond fabric with polyamide/polyester cuffs. The SMS layer material is designed to be a strong fabric which increases the durability of the gown, is resistant to tears and punctures which can help provide extra protection as well as comfort for the wearer.

**Protection**
- Fluid repellent
- Good strength characteristics
- Low linting
- Ultrasonic bonded seams
- Overlapping back
- Lightweight and comfortable
- Robust design
- Adjustable neckline
- Standard and reinforced designs

**Recommended procedures for the 3M High Protection Surgical Gown**
- Obstetrics - C-section
- Urology
- Gynaecology
- Low fluid surgery
- ENT
- Cardiothoracic
- Major orthopaedic - total hip, total knee, arthroscopy

* These are suggested gowns for specific procedures only, the choice of gown should also be based upon the individual case and patient.
