Pentamix™ Lite
Automatic Mixing Unit

Technical Data Sheet
Pentamix™ Lite Automatic Mixing Unit – from the inventor of automatic mixing

Since the introduction of the first impression materials decades ago, 3M ESPE has constantly improved and expanded its impressioning portfolio. Today, it offers a variety of high-performance vinyl polysiloxane (VPS) and polyether impression materials, fast and easy-to-use mixing devices, and other impression-related products and accessories, as well as a digital impression solution. Numerous awards from trade publications and positive customer feedback agree: All 3M ESPE products are designed to make reliably accurate impressions for great-fitting final restorations, helping dental professionals to optimize and fully control their impression procedures.

In 1993 a veritable revolution took place: 3M ESPE introduced the first automatic mixing unit for impression materials – Pentamix™. Since then, a growing community of dentists all over the world is taking advantage of the benefits of automatic mixing using the Pentamix™ System.

The new Pentamix Lite unit now completes the range of automatic mixing devices by adding an affordable but powerful model. Automix for every dental practice – AUTOMIX FOR ALL!

3M ESPE’S UNIQUE LINE OF INNOVATIONS IN AUTOMATIC MIXING

![Images of Pentamix units from 1983 to 2014]
Add unique product features to the benefits of automatic mixing

The newcomer, Pentamix™ Lite Automatic Mixing Unit, is the entry model to the world of automatic mixing – with a convenient mixing speed that is perfectly suited for beginners or dental practices that make numerous impressions every day.

The Pentamix Lite unit is designed to work with all 3M ESPE Penta™ Impression Materials – from high-viscosity putty to medium-bodied materials – and consistently delivers a homogeneous, reproducible mixing quality for void-free impressions.

The mixing unit set-up is fast and intuitive: Just plug in, push the start button, and start mixing!

With its unique swivelling design, the Pentamix Lite mixing unit also helps to save valuable counter space – changing from the upright standby to the rotated working position requires just one easy movement. Thanks to its light weight and an ergonomic handgrip, it can easily be carried from one operatory to another – if desired.

HOMOGENEOUS AND VOID-FREE MIXING RESULTS at the touch of a button

- **FAST** and intuitive set-up
- **SPACE-SAVING DESIGN** in the upright standby position
- **CONVENIENT MIXING SPEED**
- **HYGIENIC** and clean operation
- **ROBUST DESIGN** – tested for at least 10,000 putty applications
- **EASY TO CARRY** from operatory to operatory thanks to light weight and integrated handgrip
- **FULL CONTROL OF YOUR PROCEDURE WITH 3M ESPE IMPRESSION MATERIALS**
  One universal cartridge for all materials

**Penta™ Mixing Tip – Red for all Pentamix™ Devices**

- Enhanced geometry to facilitate insertion in all Pentamix devices
- Grey cover plate for increased insertion visibility
- New authentication label on packaging – ensures that you are using the original
Automatic mixing – fast, precise and convenient

Dental professionals increasingly prefer automixing of impression materials using an automix device such as the Pentamix™ System over hand- or even gun-mixing. When it comes to accuracy of impressions and final restorations, simplified work procedures and higher productivity, using an automatic mixing unit offers significant clinical and practice management advantages:

- **HOMOGENEOUS AND VOID-FREE MIXING RESULTS** of reproducible quality (Fig. 1)
- **FAST, TIME-SAVING** procedure and push-button activation
- **ECONOMICAL** and exact dispensing of the amount of material needed
- **HYGIENIC** direct filling of tray and syringe without the risk of cross-contamination
- **MORE EFFICIENT WORKFLOW** for higher productivity
- **FULL CONTROL** of your procedure together with 3M ESPE impression materials

Compared to gun-mixing, using an automatic mixing device means less hand fatigue plus higher productivity due to a higher volume in Penta™ foil bags, resulting in fewer cartridge changes (one pair of Penta foil bags can last for up to 12 full arch impressions).

</tbody>
</table>

- **PREPARATION & DOSING**
  - No dosing required
  - Preparation steps, no dosing required

- **MIXING**
  - No mixing required
  - Mixing requires tedious hand pumping
  - Mixing speed may vary (depending on the consistency of the tray material and the skill of the assistant)

- **TRAY FILLING**

*More time is needed when two partially filled cartridges have be combined to fill one tray.
Pentamix™ Lite Mixing Unit in the loop

**SPACE-SAVING, COMPACT DESIGN**

With its unique swivelling design, the Pentamix Lite unit can be moved into the upright standby position (Fig. 2) if not in use, so that it requires only minimal counter space and can be stowed in a small space. In this position it requires less than half the space of other automatic mixing devices (and only two-thirds of the space compared to the Pentamix 3 unit) (Fig. 5). When needed, it can be swivelled down into the working position with just one easy movement (Figs. 3, 4).

**FAST AND INTUITIVE SET-UP AND USE**

1. Remove the cartridge.
2. Insert Pentamix™ Foil Bag with the 3M ESPE impression material of your choice into the cartridge.
3. Insert the cartridge into the Pentamix™ Lite Mixing Unit.
4. Turn the wheel (piston) forward.
5. Attach a Pentamix™ Mixing Tip – Red.
6. Close the latch with an audible click.
7. Press the green start button to fill the impression tray or elastomer syringe.

**UNIQUE HANDGRIP AND LIGHT WEIGHT**

With an integrated ergonomic handgrip on the rear of the device (Fig. 6) and a reduced weight of only 6.7 kg (14.8 lbs.) (Fig. 7) the Pentamix™ Lite Mixing Unit is easy to carry from one operatory to another when desired or store away when not in use. It is therefore the ideal solution for practices with multiple operatories.

**FASTER TRAY FILLING**

Like its predecessors, the Pentamix Lite mixing unit helps you save valuable time compared to hand-mixing. The device’s mixing speed lets you fill even very large trays with heavy body, medium body and high consistency putty materials in only 30 seconds. Smaller trays can be filled even faster (Fig. 8). This mixing speed is well suited for beginners in automatic mixing as well as practices with many impressions per day.
Excellent results from the application test

To test how customers perceive the new Pentamix™ Lite Automatic Mixing Unit, 3M ESPE conducted a test with 32 randomly chosen dentists (making over 630 impressions) from the U.S., India, France, Poland, and the U.K., who are currently not using an automatic mixing device. Testers especially valued the easy handling (Fig. 9), the better quality of the final impressions due to homogeneously mixed, void-free impression materials (Fig. 10) and the time savings (Fig. 11).

Over 90% of the testers are very satisfied or satisfied with the easy handling of the Pentamix™ Lite Mixing Unit.

More than 90% are very satisfied or satisfied with the mixing quality from the Pentamix™ Lite Mixing Unit.

Almost 72% of the testers think that impression-taking with the Pentamix™ Lite Mixing Unit saves time compared to the mixing method currently used.

78% would recommend the Pentamix™ Lite Mixing Unit to their colleagues.

When asked “How would you describe the new Pentamix™ Lite Mixing Unit” to your colleagues, dentists from all around the world stated:

“Nice design, very smooth and constant mix” Dr. Richard Rappa, USA

“Convenient, operator friendly, less material wasted” Dr. Marileth

Coria, USA

“Awesome” Dr. Kirpa Johar, India

“Good impressions with easy mixing and saving lot of time and repetitions” Dr. Jawahar, India

“Device is easy to handle, alone or if you are two, quickly and cleanly several impression materials” Dr. Mercier, France

“Automatic mixing machine allowing the use of Impregum™” Dr. Benjamin Boublil, France

“Perfect device for reproducible high quality mixed material, easy to use, saving time aesthetically pleasing” Dr. Kamil Szymański, Poland

“Better efficiency in the prosthetic treatment” Dr. Andrzej Minkowski, Poland

“Impressions have never been so easy and so accurate!” Dr. Bilal Sheikh, Great Britain
