Works faster  
Lasts longer  
Finishes better

Introducing the 3M™ Cubitron™ II Clean Sanding Disc, a revolutionary advancement in automotive abrasive technology for body technicians featuring triangular shaped ceramic grain that:

• Cuts 30% faster than premium abrasives  
• Lasts up to twice as long  
• Delivers a finer, more uniform finish

Triangular-shaped ceramic grain (right image) is electrostatically oriented to form sharp peaks, each acting like individual cutting tools that slice through paint and body filler, wear evenly, and provide long life and consistency.

As the test data above reveal, 3M™ Cubitron™ II technology provides a significantly faster cut rate and a longer functional life than competitive premium abrasives using conventional grain.

Target applications:

• Paint removal  
• Body filler rough shaping  
• Feather edging
