3M™ Tegaderm™ I.V. Paediatric Transparent Dressing
1610

- PVC security designed to last the duration of IV therapy¹
- Notched design and sterile tape strips prevent the dressing from lifting
- Highly breathable and comfortable

Other benefits
- Smaller dressing with Teddy Bear design
- Provides an effective barrier against outside contaminants
- Unique picture frame delivery
Tegaderm™ I.V. Paediatric Transparent Dressing 1610

Easy to apply

1. Peel the liner off the dressing, exposing the adhesive surface.
2. Position the transparent window over the insertion site whilst holding the notched portion off the skin. Gently press the clear part of the dressing into place ensuring securement around the cannula.
3. Slightly overlap the soft cloth tabs under the hub to form a tight seal – press into place. The hub should rest on the soft cloth.
4. While slowly peeling off the paper frame, smooth down the dressing edges. Next, smooth down the dressing from the centre towards the edges, using firm pressure to enhance adhesion.
5. Use the two sterile tape strips to secure hub, lumens and/or tubing.

Easy to remove. Firstly remove tape strips. Separate cloth tabs and avoid skin trauma by gently peeling the dressing back on itself whilst supporting the skin, rather than pulling it up from the skin. A medical adhesive remover can also be used if required.
