3M™ Coban™ 2 Layer Compression System

“I’ve definitely noticed a difference in patient compliance and wear time.”

Andrzej Stypko, M.D.
Hopkins County Memorial Hospital, Sulphur Springs, TX

“Coban 2 Layer is different from any other compression system I’ve used in my practice. In the past, I used a multiplicity of dressings; all were difficult and time-consuming to apply. Now the only compression system I use is the 3M™ Coban™ 2 Layer Compression System.

“My patients love it because the first foam layer sticks to the skin, allowing the second layer to stay put so there is no slippage. Some patients don’t even want to switch to compression stockings when Coban 2 Layer [Compression System] needs to be removed. Women, in particular, like it because it’s inconspicuous, and they can keep wearing their own shoes. I have seen traumatic wounds and venous leg ulcers heal within one to two weeks.

Dr. Stypko is just one of the many healthcare professionals who have switched to 3M™ Coban™ 2 Layer Compression System because it’s:

- **Comfortable:** Thin, lightweight design allows patients to wear normal shoes.
- **Effective:** Delivers sustained compression and less slippage than other leading compression wraps.*
- **Versatile:** For all types, sizes and shapes of patients with ABI ≥ 0.8 .
- **Easy to Use:** Applied in two easy steps, which reduces training time.

* Clinical data on file at 3M

“I don’t see the advantage of using any other compression system. We have trained our clinical staff on how to use the bandage, and they, too, believe this is a wonderful product. I don’t think you can invent anything better than this two-layer system.”
