

3M™ Clinical Claims Editor Software for batch grouping on the IBM® z/OS™ mainframe

- Evaluate the completeness of your clinical data with expert editing
- Accurately assign Medicare Severity Diagnosis Related Groups (MS-DRGs)

Designed for payers or other users who want to process large volumes of claims, 3M Clinical Claims Editor Software (3M CCE) for batch grouping is a computerized claims record processing system for health services. 3M CCE assigns Medicare Severity Diagnosis Related Groups (MS-DRGs), evaluates the accuracy and completeness of clinical data, and identifies potential coding errors.

Grouping

The software contains all of the necessary tables and programs to accurately assign an MS-DRG. The 3M Clinical Claims Editor can also be licensed with All Patient DRGs (AP-DRGs).

Interfaces

- **Program structure:** A set of callable subroutines. The user writes an interface program that controls input and output data (I/O) and passes a block of addresses to the 3M CCE subroutines. The 3M CCE table is loaded into core on the first call to the 3M Clinical Claims Editor and is referenced by explicit addresses thereafter. A VSAM I/O source module is also included to access English description files.

Add-on processing options

- A code mapping add-on product allows ICD-9-CM codes from one year to be used with a grouper from a different year.

Hardware requirements

- Programming language: IBM Enterprise COBOL for z/OS 3.4.1, High Level Assembler
- Compiler: Enterprise COBOL for z/OS, High Level Assembler
- Development System: OS/390®
- Hardware: IBM mainframe or compatible

Core requirements and installation

The 3M CCE software can be self-installed. You will need approximately 400K for a full set of programs and tables. You must also add the size of the interface program plus I/O buffers for any datasets you are using.

- Disk requirements: less than five cylinders on a 3390 disk
- Installation medium: 3480 cartridge / electronic download
