3M™ Coban™ 2 Layer Compression System

“My patients appreciate
being able to wear
their own shoes.”

Marcia Hauter, M.D.
Wound Healing Center, Normal, IL

“For one year now, the 3M™ Coban™ 2 Layer Compression System has been the only compression system we use in my office. When my patients wear Coban 2 Layer, they don't have to purchase special post-operative shoes, which are unsafe for a person with an unstable gait and can potentially lead to more injuries. This is also far more cost-effective for my patients.

My office has experienced a recent turnover in staff. Luckily, it's been easy to train my new nurses to use, making it much more time-efficient than other compression systems. On top of all this, the wear time is excellent. After the swelling is gone, the wrap can stay on for an additional week. Coban 2 Layer is equally effective as a 4 layer wrap.”

Dr. Hauter is just one of the many healthcare professionals who have switched to 3M™ Coban™ 2 Layer Compression System because it's:

- **Comfortable:** Thin, lightweight design allows patients to wear normal shoes.
- **Effective:** Delivers sustained compression and less slippage than other leading compression wraps.*
- **Versatile:** For all types, sizes and shapes of patients with ABI ≥ 0.8 .
- **Easy to Use:** Applied in two easy steps, which reduces training time.
