

3M™ ChartScriptMD™ Software for Radiology

- Improve communication with referring physicians
- Increase case volume
- Reduce operational costs

Read. Dictate. Sign and move on.

3M™ ChartScriptMD™ Software

for Radiology provides the busy radiologist with the ability to quickly provide radiological findings to referring physicians more quickly than ever before, while reducing costs at the same time. It integrates seamlessly with your existing RIS and PACS systems, as well as your hospital's central dictation system. This means you can use one computer screen to view your images, review prior findings, and dictate in fewer steps, because the dictation is automatically associated with the correct case. No need to dictate or punch in case numbers.

Flexible and easy to use

3M ChartScriptMD Software for Radiology is the only system that allows you to choose between dictating (using instantaneous speech recognition) and sending your dictation to the hospital's centralized transcription pool in one easy-to-use screen. Not sure you're ready to rely 100 percent on speech recognition? No problem. 3M ChartScriptMD gives you the choice. Dictate and sign it now. Or dictate, delegate the transcription, and sign it later. Either way, your productivity is up.

Because of its flexibility, 3M ChartScriptMD is the system that the radiologists in your department can agree on.

The 3M advantage

Radiologists can select the methodology that works best for them: speech recognition, traditional dictation, or digital forms.

- Multiple modalities enable the completion and distribution of documents in as little time as possible
- Integrates dictation and speech recognition with image workflow to maximize dictation efficiency
- Reduces steps to complete dictations with flexible workflow

SpeechMagic™

3M™ ChartScriptMD™ Software for Radiology

Gain speed

- Integration with RIS/PACS systems transfers demographic information on the patient and exam between systems, eliminating the need for the provider to manually enter the information or swipe a barcode.
- Voice macros expedite document completion and reduce dictation time.
- Optional single sign-on removes the traditional steps required before dictating.

Enjoy the flexibility

- Multiple dictation methodologies including digital voice and immediate (front-end) and/or deferred (back-end) speech recognition allow radiologists to choose how they create reports
- Documents are auto-populated with demographic information, previously entered measurements and dates, and automatically calculated values
- Reports can be automatically printed, faxed or e-mailed to referring physicians and other clinicians
- Flexible, easy-to-use, microphone includes easy directional controls as well as softkeys for additional functionality and control; healthcare providers can activate dictation features with the press of a button while viewing an image
- Documents can be created, edited, signed and distributed in one simple step

Integration

3M™ ChartScriptMD for Radiology is designed to be integrated with:

- **3M™ ChartScript™ Software**—A document creation and distribution system that directly accesses dictations from the 3M™ VoiceScript™ Software database and updates the status with each activity.
- **3M™ ESA Software**—An electronic signature system, allowing documents to be immediately reviewed, edited and electronically signed from the same workstation.

Technology

Built on platforms designed to enhance current operating environments while remaining open to future technology, 3M solutions:

- Are compatible with industry-standard technology, such as Microsoft® Windows® 2000 and XP
- Are HIPAA-enabled applications that operate using today's standard PC and networking technology
- Use the industry-leading Philips speech recognition engine, SpeechMagic™
