Force Comparison

The graph shows the force in relation to the angle of different ligature systems. AlastiK Lingual Ligatures express the same force as an overtie, but are faster and easier to handle. They also express more force than other lingual ligatures.

What Doctors Are Saying

- AlastiK Lingual Ligatures are far better and easier to work with than any of the previous recommended tie methods. We have seen a dramatic improvement in tooth movement to regular full engagement of archwires.
- Very good overtie and regular elastic ties replacement in single anterior and premolar brackets.
- Easier to grip for assistants, saves time in comparison to overties.
- The ligatures are significantly easier to place with the same desired effect as overties, while being comfortable for patients.
- Easier to use, perfect for the Incognito Bracket.
