Pediatric Products and Solutions

Child-friendly solutions that everyone can smile about.
You protect and restore them. Before you know it, those smiles will be all grown up.

Caring for pediatric patients is both fun and challenging. You never know from one child to the next what you’ll be dealing with: an overly energetic child ... a timid or scared child ... or a busy teen. In any case, you know what to do. Treat them gently but thoroughly, and before their patience runs out. 3M products, ranging from preventive to restorative, are designed to come to your rescue.

- They’re fast and easy to use and help reduce chair time
- They’re proven to be safe and effective
- They’re designed to be patient friendly and help provide a positive dental experience

Vanish™ 5% Sodium Fluoride White Varnish
With Tri-Calcium Phosphate (TCP)
22,600 ppm F⁻ (NaF)

Fast and effective: It takes just seconds to apply the added protection of TCP. Their wiggling won’t interfere with getting great coverage because Vanish varnish migrates to hard-to-reach surfaces, including interproximal spaces! It delivers a targeted and sustained release of fluoride, calcium and phosphate.

Child friendly: You’ll calm their fear as it relieves hypersensitivity. Older kids will be glad that it’s virtually invisible on teeth. Plus, kids won’t have to wait long to eat or drink following the application.

Clinpro™ Sealant
Pit and Fissure Sealant

Easy to use: You can be confident you’ve placed the sealant in all the right places. 3M’s innovative color-change technology helps visualize placement, and the ultra-fine syringe tip makes accurate placement easier.

Effective: With low viscosity, it flows easily into pits and fissures—bonding to the enamel. Clinpro sealant contains and releases fluoride.

Child friendly: It’s a fast, easy procedure, which keeps patients happy.

Clinpro™ Tooth Crème
0.21% Sodium Fluoride Anti-Cavity Toothpaste
950 ppm F⁻ (NaF)

Effective: For children ages 2 to 6 who would benefit from extra preventive care, but don’t need a prescription-strength formula. Contains functionalized tri-calcium phosphate (FTCP) to help prevent and repair early lesions by remineralizing throughout the lesion—not just on the surface.

Child friendly: It’s only a matter of changing their toothpaste, so it fits right into their normal brushing routine, making compliance easy.
Restorative

3M restorative products are simple, easy to use and save you time and steps.

Filtek™ Supreme Ultra Universal Restorative

Effective: Natural-looking and strong—for both anterior and posterior cases.

Child friendly: Kids play hard, and accidents happen. When a patient comes in with a chipped tooth or cavity, this natural-looking composite will restore their cute-as-a-button smile.

Scotchbond™ Universal Adhesive

Fast: A child’s short attention span is no match for this easy, one-bottle, 35-second application!

Effective: Consistent bond strength to both moist and dry etched dentin. Predictable performance in self- or total-etch techniques.

Child friendly: Gain their trust with the adhesive that guarantees virtually no post-operative sensitivity!
Ketac™ Universal Aplicap™
Glass Ionomer Restorative

Easy to use: When they need the benefit of fluoride release, a glass ionomer is still the answer. Fast from start to finish—no conditioner or coating needed. Plus, it’s self adhesive and self curing.

Effective: Continuously releases fluoride for 12 months. It’s strong enough to use for long-term and stress-bearing indications.

Child friendly: The speed and simplicity is ideal for treating patients who can’t sit still.

Advanced mechanical properties of Ketac™ Universal Aplicap™ Glass Ionomer Restorative allow for extended indications that include restricted stress-bearing Class I and Class II restorations.*

3M™ Filtek™ One
Bulk Fill Restorative

Fast: Why put kids—or yourself—through incremental layering, esthetic capping layers or using extra devices to fill a large posterior cavity? This posterior composite allows up to a 5mm depth of cure for speed and simplicity without compromising esthetics.

Child friendly: Getting out of the chair fast … now that’s something to smile about!

---

Initial situation

Final situation after 1 week

Bulk fill the big fillings and you’ll be finished before the squirming begins.

When pediatric patients need more than a filling, these minimally invasive procedures are quick and easy.

**3M™ ESPE™ Strip Crown Forms**

Fast: Strip crown forms automatically contour restorative material to match natural dentition, so you can efficiently restore the beauty and function of anterior primary teeth.

Effective: It’s a very simple procedure and forms remove easily, leaving a smooth surface.

Child friendly: Designed to repair primary anterior teeth.

**3M™ ESPE™ Stainless Steel Crowns**

Fast and effective: Spare children from having to hold still any longer than necessary. These crowns are easy to trim, adapt and place. A pre-crimped cervical margin provides good retention and a snap fit. The crown readily duplicates the anatomy of primary molars, and adjustment is quick and easy.

Child friendly: Designed to repair and protect primary or first permanent molar.

**RelyX™ Luting Plus Automix Resin Modified Glass Ionomer Cement**

Fast: Waiting 2 or 3 minutes for a cement to cure for cleanup seems like an eternity to restless children. Speed up with a 5-second tack light cure option. The automix syringe saves time, too!

Effective: Sustained fluoride release.

Child friendly: Protecting little patients from post-operative sensitivity is one way you can help them overcome their fear of going to the dentist.
3M products are designed to make it easier for you to treat pediatric patients and give you confidence that your treatments will be effective.

To help you get the most from our products, we’ve created numerous resources you can access online, including:

- Videos that demonstrate our products and techniques
- Downloadable information that shows how to use our products to save steps and time
- Educational webinars
- Programs that make going to the dentist more fun for your little patients, too

And you’ll also find special offers on products you use the most!

Watch their little faces light up when you reward them with a special certificate.

Kids love being rewarded for doing a good job. After the appointment is over, reward little patients with a certificate that recognizes them for good behavior and for taking care of their teeth.

The certificate reinforces that the dentist office is a fun place to be and that there’s nothing to fear.

You can personalize it with their name—and sign it, too. They’ll beam with pride when they show the certificate to mom and dad ... and hang it on the refrigerator for everyone to see.
