

3MSM Program Design and Performance Management

Part of the 3M™ Performance Matrix Platform.

- Consulting and strategic support to guide and inform value-based care program design
- Performance dashboards that support practices in managing and achieving shared quality goals
- Data and reports that help care managers and clinicians plan care and target individuals for intervention

What is 3M Program Design and Performance Management?

This program combines consulting services, analytics and software tools designed to support payers and their providers through developing, implementing and managing value-based care initiatives, such as population health or accountable care programs.

Value-based care requires a data-driven strategy

Organizations looking to develop or participate in population health or accountable care arrangements face important decisions related to strategy and program design. These decisions can ultimately define the success of their program and include:

- What are the financial and quality goals of the program?
- Where should we target program resources?
- How will we set targets and measure performance?

Once these decisions are made, an organization can then determine the best way to put these efforts into action—the program logistics. Program leaders find themselves asking:

- How will we support practices in achieving shared goals?
- What information will most likely impact quality at the patient level?
- How will information be delivered, secured and maintained?

The switch from managing individual services for individual members to managing population health as part of an accountable care program raises these questions and more. Organizations must be able to rely on data-informed tools to guide them through this process.

Put your value-based care program in motion

3M Program Design and Performance Management supports the development and introduction of value-based care programs by providing:

Strategy and program design—Using the **3MSM Strategic Opportunity Analysis**, 3M experts uncover your organization's short and long-term savings opportunities and then help you determine goals, allocate resources and set performance objectives in areas such as attribution and total cost of care budgets.

3MSM Program Design and Performance Management

Program logistics and execution—

3M supports you through the implementation and execution of your value-based care program with performance dashboards, predictive models, care management reports, learning and engagement resources, and sophisticated analytics.

Who should use 3M Program Design and Performance Management?

- **Commercial, government and provider-owned health plan executives** who need to understand a program's opportunity size and success measures, along with the strategy for introducing it
- **Program leaders** who need regular access to population risk, cost and quality performance data to develop population health strategies that can positively impact care
- **Care managers and clinicians** who need actionable information on individual patients across the care network to develop appropriate care management plans

Features and benefits

Program design support helps you identify savings opportunities; attribute members to programs; develop a budget for allowed amounts and utilization; configure an appropriate incentive structure; determine quality thresholds; and assess population risk.

Performance dashboards allow you to measure and track key performance indicators; define who can see what data; provide support for a multi-payer hierarchy; disseminate up-to-date performance metrics; rank providers based on key performance criteria; and identify performance outliers.

Care management reports let you segment patient groups based on clinical risk categories; identify high utilizers; export reports that support care management activities; review longitudinal data for individual patients, including inpatient, outpatient, professional and prescription claims; and identify patients who experience gaps in care.

Achieve targeted program goals, such as optimizing network performance or predicting member health risk, by augmenting 3M Program Design and Performance Management with the extra data, tools and reports available in the **3MSM Healthcare Transformation Suite**.
