

Trusted Connection to exocad® DentalCAD

3M™ Margin Marking Software gives lab technicians a unique view of the oral anatomy, allowing them to accurately identify and mark the margin line on the 3D model. The margin line, 3D model and prescription information can then be easily converted and imported into exocad® DentalCAD. Affordable, subscription-based Lab Packages give labs access to the 3M™ Connection Center and the digital impression files they need. Access to this Trusted Connection requires a subscription to the Standard Lab Package.

How does it work?

1. Scan and Send

Doctors scan using the 3M™ True Definition Scanner to create a true 3D replica of the oral anatomy. The accuracy of the 3M™ True Definition Scanner provides a solid foundation for your lab to create high quality, precisely fitting restorations. Cases are sent directly from the scanner to the 3M™ Connection Center – a secure digital hub that stores, sends and converts the digital impression files.

2. Margin Mark and Convert

Labs can download the case to the 3M™ Margin Marking Software to accurately mark the margin. The files are sent back to the 3M™ Connection Center and converted to the appropriate file type. The .exo file includes the prescription information, margin line and 3D scan files necessary for design.

3. Download and Import

Download the .exo file from 3M™ Connection Center and import it into the exocad® Dental DB in preparation for design and fabrication.

4. Design and Fabricate

The exocad® DentalCAD software opens up a world of design and fabrication options for doctors and labs. exocad® offers modules for full contour and cutback restoration design, implant supported prostheses and a variety of dental appliances giving clinicians and lab technicians access to a wide variety of solutions.

How do I get started?

Download the model builder module and license from exocad. Once enabled, this module will allow you to import an .exo file from your local machine. This import functionality works on exocad® software version December 2014 and higher. Your lab will also need to be enabled to receive .exo files from the 3M™ Connection Center. Please contact 3M Customer Care 1-800-634-2249, Option 3, or email customercaresoc@mmm.com for more information. Questions about the 3M™ True Definition Scanner import functionality should be directed to your exocad® reseller.
