**Durelon®/Durelon Fast Set Technique**

**Step 1:** Remove provisional restoration.

**Step 2:** Thoroughly clean preparation with water.

**Step 3:** Gently dry preparation. Do not over dry.

**Step 4:** Dry the restoration with air.

**Step 5:** Dispense one spoonful of powder onto mixing pad.

**Step 6:** Dispense liquid.

**Step 7:** Mix powder and liquid.

**Step 8:** Place a thin, even coat of cement on inner surface of restoration. Do not use the mixture if it has lost its gloss.

**Step 9:** Seat the restoration without pressure.

**Step 10:** Allow cement to set, then remove excess.
Durelon®/Durelon Fast Set

Polycarboxylate cement in the traditional powder and liquid form for cementing inlays, crowns, bridges, and more.

**Indications**
- Inlay cementation
- Crown and bridge cementation
- Cement bases

**Advantages**
- Low film thickness ensures optimized fit and marginal integrity
- Fluoride releasing
- Chemically adheres to both enamel and dentin for reduced microleakage
- Biocompatible for sensitive patients
- Relatively neutral pH value for increased patient acceptance
- Less soluble than zinc phosphate or ZOE cements
- Also available in a fast set version that sets twice as fast with the same physical properties

**Packaging**

<table>
