

3M™ Thinsulate™ Stretch Insulation

Specifically designed for motion, 3M™ Thinsulate™ Stretch Insulation moves when you do. Elastomeric insulation guarantees a layer of warmth that gives outerwear, sportswear, gloves and accessories the freedom to expand and contract along with your fabric. Performing under extreme conditions, it stretches a full 40% in all directions, then and flexes back to its original shape.

- The original four-way stretch insulation
- Warmth with flexibility

“I love how super warm my gloves with Thinsulate are. My wife liked them so much after I let her try the pair I was wearing, she made me give them to her.”
