

Real ICD-10 results with the 3M™ 360 Encompass™ System

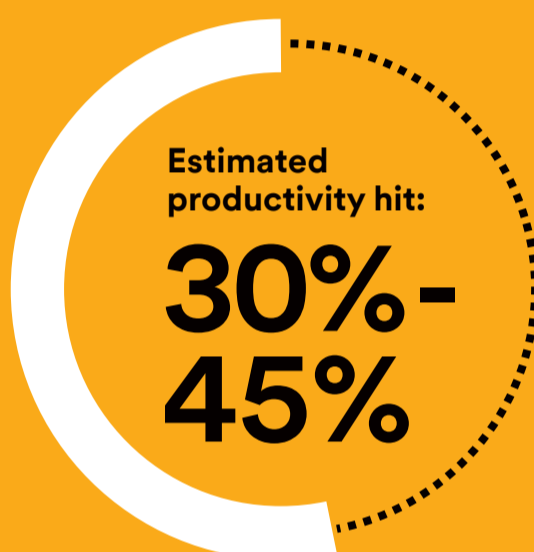

Before the launch

In the run up to ICD-10's launch, a sample review of healthcare organizations showed an anticipated productivity hit of 30 percent.

After the launch

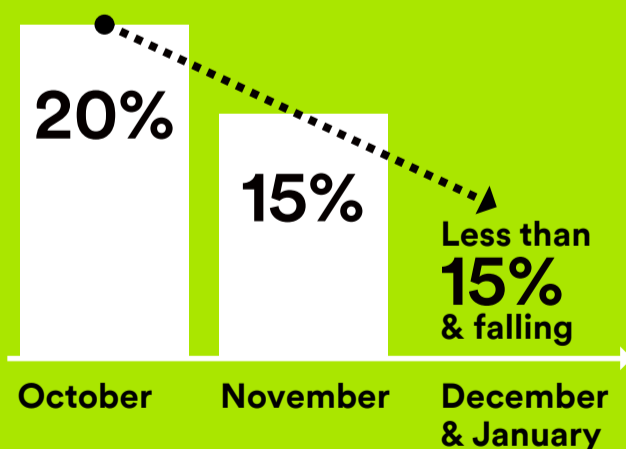

A recent survey* of 140 health information management professionals — some using computer-assisted coding, some not — estimated ICD-10 was lowering their inpatient coder productivity by 30 to 45 percent.

Our clients had a different experience

A review of 995 facilities using 3M™ 360 Encompass™ shows our clients experienced, on average, a 20 percent decrease in inpatient productivity in the days after the transition. That number has fallen every month since and will continue to do so.

Decrease in inpatient productivity:
