

3M Health Information Systems

Real results with ICD-10

**A snapshot of 3M™ 360 Encompass™
System clients before and after ICD-10.**

**“We really beat the mindset
that ICD-10 was too hard
and too complicated.”**

Jannifer Owens,
senior health information management
systems coding director, Banner Health

Banner Health System

Location: Based in Phoenix, Arizona, with 29 acute-care hospitals across seven western states.

Type: Integrated, multi-specialty, non-profit

Coding staff: 250 acute care coders

Live on the 3M™ 360 Encompass™ System since May 2013

Getting ready

“It’s the brand of 3M” that attracted Banner to the 3M™ 360 Encompass™ System, says Jannifer Owens, Banner’s senior health information management systems coding director. Banner already had 3M’s coding system—which Owens calls the “Cadillac of encoders”—and that system had performed well for the coders and leadership team.

Performing dual inpatient coding in 3M 360 Encompass since October 2014, followed by outpatient a few months later, the Banner team had a firm grip on ICD-10. Daily command center and department-specific meetings in the days and weeks before Oct. 1, 2015, helped Owens and her team feel ready.

“While dual coding, we worked on what our standards should be, and by Oct. 1, the coders were chomping at the bit, ready to go,” Owens says. “We really beat the mindset that ICD-10 was too hard and too complicated.”

senior health information
management systems coding
director, Banner Health

And after?

With all the hype and tension leading up to ICD-10, the Banner team was surprised and pleased with the smooth inpatient transition, though the outpatient engine needed more refinement.

“Everything was working the way it was supposed to,” Owens says, including:

Recurring accounts.

Banner had about 11,000 recurring accounts that would drop Sept. 30. The team had them done in four days.

11,000 recurring
accounts
completed in **4 days**

Inpatient coding productivity.

Banner expected a 30 percent productivity decline. After a little more than a month in ICD-10, a report within 3M™ 360 Encompass™ showed Banner at only a 15 percent decline in productivity, when comparing minutes spent per chart.

Initial expectation: **30%**
productivity decline, 15 percent offset by 3M

Actual performance: **15%**
productivity decline, 30+ days after transition

Blessing Hospital

Location: Quincy, Illinois

Type: Community hospital, multi-specialty

Coding staff: 14 acute care coders

**Live on the 3M™ 360 Encompass™ System since
May 2014**

Getting ready

In late 2013 and early 2014, Blessing Health System saw ICD-10 on the horizon and knew its coding operations needed to grow with the times.

“We were looking for ways to fortify our coding without additional staff,” says Laura Triplett, Blessing’s director of health information management. “We needed a way to improve our production so that once ICD-10 began, we wouldn’t have to add staff to do the work.”

With 3M 360 Encompass, Blessing added zero coders to the team. The system processes all of the organization’s inpatient, observation, emergency, one-day surgery and outpatient client services. Prior to ICD-10, Blessing saw its coding productivity jump and its DNFB drop below three days. Blessing’s precision and recall repeatedly proved above average and helped set the benchmark for other organizations.

“We wanted to take the coding experience to the next level.”

Laura Triplett,
director of health information
management, Blessing Hospital

And after?

How did Blessing fair against the expected decline? Blessing experienced only a 1.4 percent jump in minutes spent per chart.

*Industry
estimate:*

30%
productivity
decline

*Actual
performance:*

1.4%
productivity decline,
30+ days after
transition

“ICD-10 really hasn’t been a big deal for us,” Triplett says. “We still are not even seeing ICD-10 denials. It’s like Y2K all over again. Not that it hasn’t been a huge change, but we were really prepared for it.”

“Blessing couldn’t have achieved what it did without 3M 360 Encompass,” Triplett says. “Dual coding for more than three months readied the staff and eased the transition, and was reflected by the minuscule 1.4 increase in minutes per chart. Blessing officially stopped dual coding Nov. 1.”

“Our backlogs would have been greater and the staff wouldn’t have adjusted as well. We would have been a lot more behind with our DNFB. Seeing the auto-suggested codes and the comparisons were a huge asset.”

Real ICD-10 results: 3M™ 360 Encompass™

A recent survey* reported that 140 health information management professionals estimated ICD-10 could lower their inpatient coder productivity by 30 to 45 percent.

Our clients had a different experience.

A review of 995 facilities using 3M 360 Encompass shows they only experienced, on average, a 20 percent decrease in inpatient productivity.

Learn more about why our clients selected the 3M 360 Encompass System for computer-assisted coding and clinical documentation improvement to assist them with the ICD-10 transition.
