Nonstop innovation.
Now, results in just 24 minutes.

3M™ Attest™ Rapid System for Vaporized Hydrogen Peroxide Sterilization (VH2O2)
for STERRAD® 100NX® System, STERRAD® NX® System, STERRAD® 100S System
and AMSCO® V-PRO® maX System vaporized hydrogen peroxide sterilizers
It’s know time.

At 3M, we’ve been continuously innovating to bring you faster BI results for vaporized hydrogen peroxide sterilization. Now you can get results in just 24 minutes, making it practical to test and hold all loads before releasing equipment. It’s the rapid-read sterilization technology and expert support you’ve trusted for 25 years, made available for VH2O2.

Now Every Load Monitoring is not just possible, it’s practical. Take control with 24-minute results and get the peace of mind that comes from knowing that every patient will receive a high standard of care.

Know. Then go.

With faster results, you can:

- Quarantine VH2O2 sterilization loads without disrupting workflow
- Keep your department on schedule
- Improve patient safety with more frequent monitoring
- Meet recommended guidelines for Every Load Monitoring (see back of this brochure for details)

Before 24-minute results, this is what was possible. Now, every patient gets the same high level of care.

The Attest™ brand advantage gives you a standardized, simplified and supported system for sterilization assurance across VH2O2, Steam and EO modalities.

Standardization

Using the Attest system across modalities gives you the advantage of consistent equipment, interfaces, workflows and training across your department helping reduce the risk of human error.
Get the confidence of consistency.

Use the key three monitoring products from 3M to leverage the full system of sterilization assurance products. A consistent blue-towards-pink color change for all VH2O2 indicator products makes it easy to read and interpret results.

1. 1228 VH2O2 Indicator Tape
2. 1248 Chemical Indicator
3. 3M™ Attest 1295 BI includes a process indicator on top of the BI to show that it has been through the sterilization process.

✓ Simplification
BI results can automatically load into your current instrument tracking software systems for easy record keeping. Our partners include Censitrac, Microsystems, CareFusion, Haldor Advanced Technologies and Getinge Group.

✓ Support
3M™ Health Care Academy offers staff training and continuing education credits. And, expert help is always available through the 3M Health Care Help Line at 1.800.228.3957.

## Why monitor every load?

**ANSI/AAMI ST58: 2013**

“A PCD with the appropriate BI should also be used at least daily, but preferably in every sterilization cycle”

— The Association for the Advancement of Medical Instrumentation. Chemical sterilization and high-level disinfection in health care facilities.

**AORN Guideline for Sterilization**

“...Routine sterilizer efficacy monitoring should be performed at least daily on each cycle type, preferably with each load...”

— 2017 Edition AORN Guidelines for Perioperative Practice. Guideline for Sterilization. AORN is a registered trademark of AORN. AORN does not endorse any commercial company’s products or services.
