3M™ Connected Safety

**Smart.**  
**Connected.**  
**Personal.**

# Enhance compliance. Save time. Be proactive.

With 3M™ Connected Safety, you're not just streamlining your safety and asset management system — you're giving yourself access to real-time data that can help you enhance worker protection. The advantages of having data at hand versus on file include:

▶ **Added compliance confidence**

Know at a glance the status of your workforce and equipment.

▶ **Data on demand**

Get a direct line of sight on selected compliance metrics in real time.

▶ **Pick your priorities**

Configure your workflow to meet different needs in different parts of your operation.

▶ **Account for your assets**

Gain improved traceability of high-value assets.

▶ **Sure and secure**

Put your trust in a high-security software platform with powerful encryption and multi-factor user authentication.

▶ **People, not paperwork**

Gain efficiency with everything entered and stored online, allowing you more time on the floor.

# It's time for Connected Safety that's more personal.

3M™ Connected Safety is the new way to stay compliant, audit-ready and data savvy.

## 1. Select

Choose the PPE and/or equipment to include in Connected Safety. The system will automatically load up-to-date documentation for your 3M PPE, but you can easily add details for non-3M PPE and equipment.

## 2. Tag

Attach the RFID tags to the PPE and/or equipment you want to enable. Barcodes or serial numbers can also be used.

## 3. Setup

Enter the maintenance and inspection checklists you currently do on paper.

## 4. Enter

Load the employees, PPE and/or equipment you want to include into the database.

## 5. Go

That's it. You're now ready to manage your PPE and equipment program digitally.

If you have any trouble with setup, we'll be happy to help — even onsite. Contact 3M Technical Service at 800-243-4630.

Compatible with i-Safe™ tags — standard on most DBI-SALA® Fall Protection Equipment.

3M always recommends, at a minimum, following all manufacturer recommendations for PPE inspection, cleaning and maintenance procedures and schedules.

## Connect to products.

- ▶ Quickly access equipment history and upcoming events
- ▶ Assign PPE and access employee training and information
- ▶ Software includes checklists and instructions for popular 3M PPE products
- ▶ Utilize automated analysis to help streamline your process
- ▶ Use it with your existing PPE and other equipment, including AEDs, forklifts and fire extinguishers
- ▶ Compatible with i-Safe™ tags, standard on most DBI-SALA® Fall Protection Equipment

## Connect to people.

- ▶ Access information on your mobile device or desktop when connected to a web browser
- ▶ More easily spot issues that can help identify potential health and safety concerns
- ▶ Document PPE usage to help lower risk more easily
- ▶ Keep your workforce up to date on compliance with real-time access to selected data and email notifications

## Connect to places.

- ▶ Cloud-based for simple deployment and access anywhere
- ▶ Instantly connect to data across multiple locations
- ▶ Intuitive dashboard for easy use
