SSIs create a human and financial cost

Occur in 2-5% of all patients undergoing inpatient surgery

Cost on average $20,785 per patient

Result in 2-11X increased risk of mortality

Result in Lower patient satisfaction

SSIs can affect a patient’s quality of life and create stress for patients and their families. And they place a huge operational and financial burden on health care systems and providers. Using evidence-based practices to reduce skin microbes – before and during surgery – and creating a barrier to microbial migration can help reduce the risk of an SSI.

3M™ Steri-Drape™ Absorbent Prevention Fabric
• Low-linting, nonwoven, absorbent fabric laminated to a plastic film
• Resistant to fluid strike-through
• Absorbent throughout the entire drape, eliminates the need to define a “critical zone”
• Meets Flammability Class 1 (CFR Title 16 Part 1610)

3M™ Ioban™ 2 Antimicrobial Incise Drape
• Designed with continuous broad-spectrum antimicrobial activity in the drape adhesive where it can’t be washed away
• Clinically proven to help reduce the risk of wound contamination and immobilize bacteria on the skin

3M™ Ioban™ 2 Antimicrobial Incise Drape Easy-Delivery (EZ)
• Polyethylene liner is designed to come off smoothly, effortlessly, with no tearing, for easier drape delivery
• Drape and liner feature a full-width handle for control of liner release and drape application

Fight SSIs from every angle.

**3M™ SURGICAL DRAPES**

A line of drapes designed with the six principles of draping in mind

Whether a surgery is performed in a traditional operating room, an ambulatory surgery center or a physician’s office, you can be sure of one thing: one or more surgical drapes will be used. And every drape used during that procedure will address one or more of the six basic draping objectives or “principles.” 3M offers many single-use, disposable surgical drapes to help meet these principles:

1. **Isolation**
   Isolating dirty, contaminated areas from clean areas.

2. **Barrier**
   Preventing fluid penetration.

3. **Sterile Field**
   Creating a sterile operative environment by aseptic application of sterile materials.

4. **Sterile Surface**
   Creating a sterile surface on the skin which acts as a barrier to help prevent skin flora from migrating to the incision site.

5. **Fluid Control**
   Channeling and collecting body and irrigation fluids.

6. **Equipment Draping**
   Allowing non-sterile equipment to be brought into the sterile field.
