Trust and Confidence. Even Under Fire.
Protecting Lives for More Than 30 Years

In 1974, the movie *Towering Inferno* sparked the imagination of Richard Licht, a 3M product developer who passionately believed 3M technologies could be used to improve the safety of multi-story buildings. Several devastating fires — including the 1980 MGM Grand Hotel fire that killed 84 people and injured 679 — inspired Licht to develop the first firestop products based on existing 3M intumescent technology.

Recognized by many at 3M as “one of the fathers of firestopping,” Licht also helped develop some of the first firestop requirements in commercial building codes. He worked tirelessly to make the codes more progressive to improve the safety of all buildings.

Comprehensive fire protection includes fire detection, fire containment and fire suppression. 3M Fire Protection Products address fire containment and are an integral part of a well-designed fire protection system. Our understanding of the spread of fire, smoke and toxic gases helps us continue to create preventative and affordable firestopping solutions.

Partners in Protection

Being a leader in the fire protection industry goes beyond selling innovative products. 3M partners with you from the start — providing a comprehensive library of tested and listed systems, excellent technical services, and the superior training you need to enhance your firestopping capabilities.

We meet with you to discuss your application needs and to help you select the best firestopping solutions. To help ensure your inspection process goes smoothly, we work directly with building inspectors to answer their questions and help you respond to any concerns the inspector might have. By continuing to work closely with you throughout a building’s life — including retrofit and maintenance activities — we support you as you work to ensure your building’s firestopping is being properly managed.

Risk Management and Facility Maintenance

3M’s Firestop Risk Management and Facility Maintenance Programs provide a comprehensive approach to helping you manage the complexities of the firestopping process. From helping you define your initial needs to helping manage your firestopping throughout a building’s life, we walk you through the decisions and steps required to keep your project on time, in budget and code-compliant. Our Healthcare Facility Maintenance Program includes additional tools for Joint Commission and other critical life safety inspections.

For more information regarding the 3M Firestop Risk Management and Facility Maintenance Programs, contact your local 3M Fire Protection Sales Representative, or call 1-800-328-1687.

Choosing a System

The easy-to-use, online 3M Firestop Systems Selector helps you choose the firestop solution best suited to your application. To learn more, and to see the latest in firestopping solutions, visit 3M.com/firestop
Training and Testing

Training With The Best

When it comes to training, 3M delivers. We provide comprehensive online firestop training so you can train when it’s most convenient for you, 24/7.

3M firestop training provides a wealth of information — from firestopping basics and system nomenclature to detailed installation techniques. The program’s high-quality videos highlight proper installation techniques in a broad range of systems for through penetrations, construction joints and flexible wrap systems.

Over the last 10 years, 3M has provided detailed, hands-on firestop training for more than 5,000 code officials, architects, contractors and firestop professionals at our online fire-test center. Plus, 3M offers jobsite and on-location training by our qualified sales representatives.

For more information, visit 3M.com/firestop

Architects, Earn AIA/CES LUs

Since 1999, all active members of the American Institute of Architects must successfully complete 18 Learning Units (LUs) including the CES requirement of 12 hours of Health, Safety, Welfare issues (HSW) and 4 hours of Sustainable Design (SD) for annual membership renewal.

3M™ Fire Protection Products, long recognized as an industry leader, is now a Registered Provider of AIA/CES credits, including HSW.

In our continuing effort to provide a complete and comprehensive firestopping program available, 3M™ Fire Protection Products offers substantial and informative courses designed with you in mind. New applications, products and the ever broadening array of system designs are covered by the most knowledgeable and helpful experts in the industry. These topics allow you to keep updated on the latest firestopping technology and systems while earning required LUs.

3M Test Center

For more than 30 years, our fire-test center has ensured quality results and has been qualified under UL and Intertek guidelines for UL’s Client Test Data Program and Intertek’s Satellite Laboratory Program. Extensive product testing, online and hands-on training are just a few more ways 3M partners with you to help keep people safe.
3M Firestopping
Progress and Trends

As an industry leader, 3M drives technologies that enable lower cost building solutions. For instance, 3M intumescent technology enabled the use of plastic pipes that were previously banned in commercial buildings due to their combustible nature — providing a lower cost, easy-to-install solution for electrical conduits and plumbing lines.

3M is proud to be an industry leader in firestopping. Our dedication to stringent testing and code developments help make buildings safer today than they were even 10 years ago. And when that dedication is backed by a brand as powerful as 3M, you get what you would expect — proven reliability and outstanding service.

The construction industry is increasingly moving toward easy-to-use firestop solutions. That’s why 3M, in its leadership role, provides cutting-edge and fully integrated systems. These systems are designed to help you efficiently construct safer buildings that help protect lives and property.

The majority of 3M’s firestopping innovations are tested online in the company’s own UL and Intertek certified fire-test center. By testing these systems in job-specific conditions, 3M can more effectively provide fire protection solutions that meet current industry needs.

From time-tested fire barrier sealants to today’s innovative firestop devices and duct wraps, 3M scientists work to develop solutions to firestop virtually anything on a building site. With over 100 products and 1,000 tested approved systems, 3M has the most complete program for all your firestopping needs.

Building designs and uses continue to evolve, and so too must 3M firestop technology. For example, in buildings where telecommunication cables are constantly being upgraded, the 3M™ Fire Barrier Pass-Through Device allows for re-enterability and helps keep cables organized and protected.
Technical Information
The 3M Fire Protection Product website is designed to enhance our technical and sales support by providing users easy access to critical information needed in the construction and maintenance of buildings requiring passive fire protection. In addition to a wealth of product and technical information, here are some value-add tools that can be accessed from the 3M Fire Protection website:

### 3M System Selector

Helps you quickly navigate through our extensive library of tested and listed systems to provide a short list of suitable systems for a specific application.

### 3M Submittal Wizard

Allows users to access, select and combine documents from multiple applications on the 3M Fire Protection website. Selected documents can be combined into a single document for user’s submittal.

### Training

3M offers fire protection training at your site, online or at our UL certified test center. Our website provides information on upcoming courses as well as registration for online training. 3M Fire Protection’s online learning management system is designed to provide users with general firestopping information and trade-specific installation details.

### 3M Firestop Management System

This web-based application is designed to help existing facilities monitor their fire barrier management system. With specific functionality to help healthcare facilities pass Joint Commission and other key life safety inspections, key features include contractor management (e.g. issue permits, monitor access), firestop system management down to every floor or wall, document retention including life safety plans and installation photos, and report generation (e.g. system inventory or contractor status).
3M.com/firestop

Please visit our website often. It contains the most current product information and is your first stop to find a system solution and to stay informed about what's new with our products. All of the resources provided in this guide are constantly updated and made available for you to download at any time.

Fire Barrier Rated Foam

3M™ Fire Barrier Rated Foam FIP 1-Step

Designed to expand up to 5 times in volume after dispensing, 3M™ Fire Barrier Rated Foam FIP 1-Step is a two-part urethane, smoke, sound and firestopping foam. This intumescent foam can be used to fill the annular space created by pipes and cables penetrating through fire-rated construction. It’s an alternative to mineral wool, bricks, pillows and runny, ineffective foams and is UL listed.

- Firestop tested and rated up to 2 hours in accordance with ASTM E 814 (UL 1479) and CAN/ULC S115
- Sag resistant, quick curing formulation that expands up to 5 times in volume during installation
- Intumescent foam expands when exposed to fire
- Re-enterable and repairable foam remains pliable after installation
- Excellent adhesion and does not require backing material in wall or floor applications
- Paintable with primer

Water Based Firestop Sealants

3M™ Fire Barrier Sealant CP 25WB+

3M™ Fire Barrier Sealant CP 25WB+ is a high-performance, intumescent latex-based sealant offering outstanding fire performance plus a non-halogen formula. Approved for the majority of caulk through penetration systems.

- Firestop tested up to 4 hours in accordance with ASTM E 814 (UL 1479)
- Acoustic barrier: STC-Rating of 54 when tested in a STC 54-rated wall assembly
- Provides L-Rating (smoke seal)
- Water based: easy cleanup and routine disposal with no special handling
- Intumescent: expands when heated to seal around items consumed by fire
- Re-enterable/repairable
- Halogen-free and no-sag formulation
- Over 600 tested and listed systems
- One-part system: no mixing or measuring required
- Fast-drying: tack-free in approximately 10 – 15 minutes
- Paintable (best results obtained after 72 hour cure)
- Red color widely recognized as a firestop for inspections
- High caulk rate: 1000g/min. with 1/4 in. nozzle opening
- Documented aging properties

Not for use with CPVC pipe.
Water Based Firestop Sealants (cont.)

3M™ Fire Barrier Sealant FD 150+
3M™ Fire Barrier Sealant FD 150+ is a latex sealant designed for use as a one-part fire, smoke, toxic gas sealant. Approved for up to 3 hour rated systems. CPVC compatible.

- Firestop tested up to 3 hours in accordance with ASTM E 814 (UL 1479)
- Fire Resistive Joint System tested up to 4 hours in accordance with ASTM E 1966 (UL 2079)
- Water based: easy cleanup and routine disposal with no special handling
- Intumescent: expands when heated to seal around items consumed by fire
- Fast drying: tack-free in approximately 8–12 minutes @ 73°F (23°C)
- Paintable (best results obtained after 72 hour cure)
- High caulk rate: 2000g/min. with 1/4 in. nozzle
- Easy-to-identify yellow color

Not for use with CPVC pipe.
3M™ Fire Barrier Water Tight Sealant 3000 WT

3M™ Fire Barrier Water Tight Sealant 3000 WT Intumescent Sealant forms an effective barrier to fire and water in through penetrations. This high-performance sealant helps prevent water and moisture intrusion while protecting buildings and their occupants by preventing the spread of fire, smoke and toxic gas.

- Intumescent silicone for use in systems with a firestop rating up to 4 hours when tested in accordance with ASTM E 814 (UL1479)
- Meets UL Water Leakage Test, W Rating: Class 1 requirements for systems tested in accordance with ANSI/UL 1479
- Helps prevent moisture and water migration through a building
- Minimizes noise transfer: STC-rating of 53 when tested in STC 54-rated wall assembly
- Excellent weathering properties
- Ideal for fast-track construction
- Easy application with standard caulking gun or pneumatic pump
- Excellent bonding
- Gray color with black flecks

3M™ Fire Barrier Water Tight Sealant 1000 NS and 3M™ Fire Barrier Water Tight Sealant 1003 SL

3M™ Fire Barrier Water Tight Sealant 1000 NS (non-slump) and 3M™ Fire Barrier Water Tight Sealant 1003 SL Silicone Sealant (self-leveling) are ready to use, one-component silicone elastomers. Both cure upon exposure to atmospheric humidity to form a flexible seal. Both sealants remain elastomeric and are weather resistant. They bond to most common construction materials.

- Firestop tested up to 3 hours in accordance with ASTM E 814 (UL 1479)
- Joint System Fire Resistance tested in accordance with ASTM E 1966 (UL 2079)
- Meets UL Water Leakage Test, W Rating: Class 1 requirements
- Minimizes noise transfer: STC-rating of 56 when tested in STC 56-rated wall assembly
- ±25% dynamic joint movement capability
- Excellent adhesion
- Cures upon exposure to atmospheric humidity
- Applied with conventional caulking equipment
- Re-enterable/repairable
- Aids in the prevention of moisture and water migration through a building
- Light gray color
Moldable Putty

3M™ Fire Barrier Moldable Putty+ Pads and Sticks
3M™ Fire Barrier Moldable Putty+ Pads and Sticks are designed for use as a one-part, 100% solids intumescent firestop that restores the integrity of fire-rated building construction.

- Provides up to 4 hour fire ratings when tested by Underwriters Laboratories Inc. in accordance with ASTM E 814 (UL1479)
- Remains pliable and flexible for easy installation and re-enterability
- UL-classified for telecommunications applications (innerduct, fiber optic and cables)
- Won’t dry out or crumble
- Non-halogen formula
- Adheres to all common building surfaces including metal and plastic electrical boxes
- Provides draft and cold smoke seal even before temperature increases
- Intumescent: expands when expose to fire to form a hard char which helps prevent the spread of fire, smoke and toxic gas

Small pads are typically used as a wall opening protective (e.g., membrane penetrations made by listed steel or non-metallic electrical boxes). Larger pad sizes are used to firestop metallic and non-metallic electrical outlet boxes up to 14 in. x 4.5 in. by 2-1/2 in. Sticks are typically used to seal gaps between cables in multiple penetrations and to firestop cable bundles, insulated pipe, electrical conduit, metal pipe and other through penetrations. Putty pads or sticks can be molded together (pads to pads/sticks to sticks) for larger applications.

Silicone Sealants

3M™ Fire Barrier Silicone Sealant 2000+
3M™ Fire Barrier Silicone Sealant 2000+ is a ready-to-use, gun-grade, one-component silicone elastomer that cures upon exposure to atmospheric humidity to form a flexible seal. Sealant remains elastomeric and is weather resistant. It will bond to most common construction materials.

- Firestop tested up to 3 hours in accordance with ASTM E 814 (UL 1479)
- Firestop tested for up to 4 hours in construction joint systems in accordance with ASTM E 1966 (UL 2079)
- Minimizes noise transfer: STC-Rating of 56 when tested in STC 56-rated wall assembly
- ±13% dynamic joint movement capability
- Re-enterable/repairable
- Excellent weatherability
- Superior adhesion
- Gray color

3M.com/firestop  1-800-328-1687
Pass-Through Devices

3M™ Fire Barrier Pass-Through Devices

3M™ Fire Barrier Pass-Through Devices are a line of integrated firestopping devices that create a fire-proofed dedicated space for voice, data, telecom wires and pipes. Available in a variety of shapes and sizes. Mounting accessories and foam replacements sold separately.

- Firestop tested for up to 4 hours in accordance with ASTM E 814 (UL 1479)
- One-piece, hinged metal enclosure makes installations fast and easy
- Blank to multiple penetrants tested (0 to 100% fillable)
- Red color: easy to identify as a fire rated device during inspection
- Stackable for multiple penetrations (square devices)
- Warning labels included on device
- UL classified: meets code requirements
- Re-enterable for addition and removal of penetrants

Putty Sleeve Kit

3M™ Fire Barrier Putty Sleeve Kits

3M™ Fire Barrier Putty Sleeve Kits offer an affordable and re-enterable solution to meet firestop codes for the installation of cable and blanks in both new or retrofit applications. Ready-to-install kit with all items needed for a complete cable or blank firestop installation.

- Firestop tested for up to 4 hours in accordance with ASTM E 814 (UL 1479)
- One-piece, hinged metal enclosure makes installations fast and easy
- Blank sleeve (0% cable fill) accommodates future cable installation
- Two-piece split/hinged design for easy retrofit installation on existing cables
- Suitable for installation in gypsum wallboard and concrete walls or floors
- No gasket required

Cable types can be a mixture of the following:

- 100 pr. No. 24 AWG copper conductor telephone cables
- 1/C-750 kcmil copper conductor power cable
- 7/C-No. 12 AWG copper conductor control cables
- Coaxial cables
- No. 23 AWG Category 6 data cables
- Fiber optic cable
- 3/C-No. 2/0 AWG aluminum conductor SER cable with No. 1 AWG aluminum ground conductor
Fire Barrier Pills

3M™ Fire Barrier Self-Locking Pillows

3M™ Fire Barrier Self-Locking Pillows are self-contained, highly-intumescent product designed to firestop a wide variety of through penetrations including cable trays, conduit and blank openings. Interlocking strips hold pillows securely together yet release easily for retrofit or reuse — just remove and reinstall pillows as needed.

- Firestop tested for up to 3 hours in accordance with ASTM E 814 (UL 1479)*
- L-Rating (smoke seal) achievable when used in conjunction with 3M™ Fire Barrier Moldable Putty
- Easy retrofit: remove and reuse pillows as needed
- Interlocking strips lock pillows together
- Graphite-free composition
- Available in three sizes**
- Easy to install, easy to inspect
- No wire mesh required to secure in opening
- Can be cut and retaped with box sealing tape for odd-sized gaps

* Ratings achieved in openings up to 1024 sq. in. (6606 sq. cm).
** Any combination of pillow sizes can be used to firestop an opening provided the minimum compression requirements are met (minimum of 25% within the opening).
Fire Barrier Blocks, Plugs and Planks

3M™ Fire Barrier Blocks, Plugs and Planks

3M™ Fire Barrier Blocks and Planks are pre-formed foam units designed for easy installation to effectively seal medium to large openings in wall and floor through-penetrations against smoke, toxic gas and flame. Plugs are designed for up to 5 inch diameter openings.

- No cure time means faster completion
- Paintable with primer
- Installation requires no special tools
- Can be repaired and reused as needed, saving time and labor
- Firestop tested in accordance with ASTM E 814/UL 1479
- Can be sealed with 3M™ Fire Barrier Rated Foam FIP 1-Step and other 3M™ Fire Barrier Sealants (sold separately)

Composite Sheet

3M™ Fire Barrier Composite Sheet CS-195+

Intumescent sheet used to firestop large openings. Seals penetrations against flame spread, smoke and toxic gases. This composite sheet has multiple applications, including blank openings, through penetrations of multiple cable, pipe ducts, bus ducts and cable trays. The fire-resistive intumescent sheet is bonded on one side to a layer of 28-gauge galvanized steel. The other side is reinforced with hexagonal shaped steel-wire mesh and covered with an aluminum foil scrim.

- Firestop tested for up to 4 hours in accordance with ASTM E 814 (UL 1479)
- Intumescent (expands with heat) to form a hard char that tightly seals penetrations against flame spread, smoke and toxic gases
- Multiple applications: through-penetration firestop, heat shield and firebreak protection
- UL-classified: meets all code requirements
- 100% solids
- Lightweight: easy to handle, just cut and form to desired shape
- Re-enterable for new or retrofit installations
- Easy to fasten: bolt-punch or drill-through
- No mixing or damming: installs easily with screws or anchor bolts
- Versatile: can be cut to fit irregular shapes
- Thermally conductive: allows unwanted heat buildup to escape
- Easy to install using common trade tools
Firestop Wraps

3M™ Fire Barrier Tuck-In Wrap Strips and Rolls

3M™ Fire Barrier Tuck-In Wrap Strips and Rolls are designed for use with plastic pipe penetrations through floors and walls. Engineered for top-side firestop installations, the tuck-in wrap strip simplifies labor by helping to eliminate the need for retaining collars, concrete screws, ladders, etc. The flexible intumescent strip wraps around the pipe and easily slides into the annular space.

- Firestop tested up to 3 hours in accordance with ASTM E 814 (UL 1479)
- Designed for improved top-side concrete floor installations to help eliminate the need for steel retaining collars and most other bottom-side installation equipment and materials
- Adhesive-backed label for quick installation
- Ready-to-install 3/16 in. thick x 2-1/2 in. wide wrap strips: available in 8.2 ft. rolls or strips precut to length for 2 in., 3 in. and 4 in. non-metallic pipes
- Firestop up to 6" in. PVC pipe

*6 in. Pipe installation requires 2-layers using 3M™ Fire Barrier Tuck-In Wrap Strip Roll

3M™ Fire Barrier Wrap Ultra GS

3M™ Fire Barrier Wrap Ultra GS is a graphite-based, largely inorganic, flexible, fire resistive, intumescent wrap. 3M™ Fire Barrier Wrap Ultra GS is designed to firestop plastic pipe penetrations in fire-rated walls, floors and floor/ceiling assemblies. The unique, intumescent property of this material means that as penetrating items such as plastic pipe are consumed by fire, 3M™ Fire Barrier Wrap Ultra GS expands to maintain a tight seal, preventing the spread of fire, deadly smoke and other by-products of combustion.

- Intumescent: expands when heated to seal around items consumed by fire
- UL approved for up to 3 hour fire ratings when tested in accordance with ASTM E 814 (UL1479)
- Excellent flexibility and versatility
- Thermal insulator and smoke seal

3M™ Fire Barrier Wrap Strips FS-195+

Firestops difficult through penetrations such as plastic pipe, insulated pipe and cables. When exposed to heat, this flexible, rubber-like strip intumesces, expanding up to ten times its original volume, forming a very hard char to prevent the migration of fire, smoke and toxic gas.

- Firestop tested up to 4 hours in accordance with ASTM E 814 (UL 1479)
- 100% solids
- One-part, graphite-free, fire-resistive strips with foil on one side
- Versatile: can be cut to fit irregular shapes
- Re-enterable: no special tools required
- Non-flame supporting
- Applications include: telephone cable, metal pipe, plastic pipe, conduit, insulated metal pipe and cable trays
- UL-classified for use on PVC, ABS, ccPVC, ccABS, PVDF, FRPP, PP and PB plastic pipe
- Dark red color
Restricting Collar

3M™ Fire Barrier RC-1 Restricting Collar

This collar works in conjunction with 3M™ Fire Barrier Wrap Strip FS-195+ and 3M™ Fire Barrier Wrap Ultra GS to close an opening left by a burned away plastic pipe.

- UL-classified for use on PVC, CPVC, ABS, ccPVC, ccABS, PVDF, PP and PB plastic pipe
- 28 gauge steel
- Used in conjunction with 3M™ Fire Barrier Wrap Strips (FS-195+ or Ultra GS) when plastic pipes have larger than a 4 in. diameter (refer to system details)

Plastic Pipe Devices and Ultra Fast Anchors

3M™ Fire Barrier Ultra Plastic Pipe Device, 3M™ Fire Barrier Plastic Pipe Device and 3M™ Ultra Fast Anchors

3M™ Fire Barrier Ultra Plastic Pipe Devices are one-piece metal collar assemblies encasing heat expanding 3M™ Ultra GS (intumescent) material. Theses devices are used for new and retrofit installations and will accommodate 1-1/2 in., 2 in., 3 in. and 4 in. pipes. The 3M™ Fire Barrier Plastic Pipe Device utilizes 3M™ Fire Barrier Wrap FS-195+ (intumescent) material and will accommodate and 6 inch plastic pipes. These devices firestop ccPVC, PVC, CPVC, FRPP, PVDF, ccABS and ABS pipes, cables or combos penetrating 1- and 2-hour floor/ceiling assemblies, as well as 1-, 2- and 3-hour fire-rated gypsum wallboard and fire-rated concrete wall, floor or hollow core assemblies. The device are ideal for application in drain, waste and vent or closed pipe systems.

- Up to 3-hour fire ratings when tested in accordance with ASTM E814 (UL1479)
- Ultra fast anchoring system (optional)
- One piece assembly for quick and easy installation
- Factory-made helps ensure quality consistency
- UL Classified: meets code requirements — universally recognized
- Easily identified red color (fire rated device)

Intumescent Door/Frame & Glazing Strip

3M™ Expantrol™ Flexible Intumescent Strip E-FIS

3M™ Expantrol™ Flexible Intumescent Strip E-FIS has been designed to seal the air space between doors and frames and for glazing fire resistant glass to help prevent the passage of smoke and flames in the event of a fire. When exposed to heat such as would occur in a fire, the material expands to seal the gap and forms a char to deter the spread of a fire. This expansion or intumescence of the material helps prevent noxious gases, flames or other by-products that may be produced in a fire from penetrating into adjacent areas.

- Easy, cost-effective installation
- Excellent flexibility
- Non-flame supporting
- Low odor
- Intumescent: expands when heated to seal around objects consumed by fire
- Smoke seal: retards spread of toxic by-products of combustion
Cast-In Devices

3M™ Fire Barrier Cast-In Devices and Accessories

3M™ Fire Barrier Cast-In Devices are designed to make firestopping through concrete easy and affordable. 3M™ Fire Barrier Cast-In Devices are installed prior to the concrete pour (attaching directly to the wood forms or fluted metal decking) and can be adjusted to various concrete depths. Both devices feature easily adjustable bodies that can be adopted to concrete height, before or after pour. These devices are used primarily in new installations and are designed to accommodate concrete thickness as thin as 2-1/2 in. and pipe sizes from 1-1/2 in. to 6 in. Achieve up to 3 hour F Ratings when tested in accordance with ASTM E 814 (UL 1479).

Accessories include: 3M™ Fire Barrier Cast-In Device Height Adapter (for up to up to 12 in. concrete thickness), 3M™ Fire Barrier Cast-In Metal Deck Adapter (for use with fluted metal decks), 3M™ Fire Barrier Cast-In Tub Box Assembly (to create a void for plumbing access) and 3M™ Fire Barrier Cast Aerator Adaptor (to create a void around aerators).

- Easy installation, annular space allows for easier pipe installation
- Pipes may be installed from top or bottom of floor
- Color coded caps, retainers and labels allow quick identification of device type (white for plastic and black for metal)
- Easily adjustable bodies that can be adapted to concrete height from 2-1/2 in. to 8 in. (thicker pours can be accommodated with height adapter)
- Available in 2 in., 3 in., 4 in. and 6 in. diameter by 8 in. height
- Metallic devices (black cap) are used for metallic pipe, single and multiple cables, insulated pipe and HVAC line sets
- Non-metallic devices (white cap) are used for non-metallic pipe (including CPVC) and HVAC line sets

Firestop Spray

3M™ FireDam™ Spray 200

3M™ FireDam™ Spray 200 is a flexible, sprayable, water-based coating that dries in ambient conditions to form a flexible seal. 3M™ FireDam™ Spray 200 has an extensive portfolio of tested and listed systems for protecting construction joints, and perimeter joints (curtain wall joints). In addition this product is used to firestop through penetrations with up to 2-hour rated systems.

- Up to 4-hour fire protection in construction joints per ASTM E 1966 (UL 2079)
- Up to 2-hour fire protection for through penetration systems per ASTM E 814 (UL 1479)
- Highly elastic material maintains performance with up to ±50% movement capabilities
- High-cling properties help prevent sagging
- Water-based: dries when exposed to the atmosphere, easy water clean-up
- Robust job site formula: freeze/thaw resistant, uniform seal formation in heat and cold conditions
- Available in gray and red: applied with conventional airless spray equipment
- Fast drying: paintable when cured
**Firestop Spray (cont.)**

**3M™ Fire Barrier Watertight Spray**

3M™ Fire Barrier Watertight Spray is a sprayable, moisture-curing hybrid siliconized polymer that forms a tough, elastomeric coating. This material is used to firestop perimeter joints (curtain wall) and construction joints.

- Up to 3-hour fire protection in construction joints per ASTM E 1966 (UL 2079)
- Up to 3-hour fire protection in perimeter joints per ASTM E 2307
- Elastic material maintains performance with up to ±10% movement capabilities
- Paintable with primer
- Broad range of applications (extensive portfolio of tested and listed building and perimeter joint systems)
- Improved spraying pattern: applied with conventional airless spray equipment
- Robust jobsite formula (freeze/thaw resistant and uniform seal formation in hot or cold conditions)

**Firestop Mortar**

**3M™ Fire Barrier Mortar**

3M™ Fire Barrier Mortar is a lightweight non-structural cementitious firestop product with variable mix ratios for use in through penetration applications. Up to 3-hour fire protection in tested and listed systems. Off-white with dark flecks, ready for mixing with potable water.

- Variable mix ratio: permits self-leveling as well as no-sag (no forming) application consistencies, resulting in labor savings
- Excellent adhesion: will bond to concrete, metals, wood, plastic and cable jacketing
- Re-enterable without use of power tools: results in lower maintenance costs due to ease of making cable changes
- Asbestos-free

**Flexible, Fire-Resistive Plenum Wrap**

**3M™ Fire Barrier Plenum Wrap 5A+**

3M™ Fire Barrier Plenum Wrap 5A+ is a fire resistant wrap encapsulated with a scrim-reinforced foil. It provides a flexible, non-combustible enclosure for cables and pipes in return air plenums as tested to NFPA 262 (UL 910). Use with single and multiple 1 in. and larger plastic pipes and cables. This non-asbestos wrap contains a safer fiber construction and installs easily because of its high flexibility and strength.

- Tested to NFPA 262 (UL 910) flammability test, UL 1887 and ASTM E 84
- Lightweight with high flexibility for easy installation
- Safer fiber construction*

*Has been demonstrated to be soluble in the lungs according to EU67/548/EWG, Note Q for biopersistence.
Flexible, Fire-Resistive Duct Wrap Protection

3M™ Fire Barrier Duct Wrap 615+

Flexible solutions for the protection of grease ducts, ventilation air ducts, return air plenums, emergency circuits, structural steel and more. These flexible wrap products make installation easy, even around corners. Ideal for use in a wide variety of commercial and industrial applications.

T-rating for metallic through-penetrating items: 3M™ Fire Barrier Duct Wrap 615+ is used in conjunction with 3M Fire Barrier sealants to achieve up to 2-hour equal F-rating and T-rating in ASTM E 814 (UL 1479) tested through-penetrations.

- Lighter weight for easier installation (nom. 1-1/2 in. thick, 6 pcf density)
- Zero clearance to combustible throughout the entire enclosure system
- Highly flexible for installation ease
- Widest range of duct penetration firestop systems
- Low thermal conductivity and thermal shock resistant
- Supports continuous use temperatures of up to 1832°F (1000°C)
- Safer fiber construction* for contractor piece of mind

*Has been demonstrated to be soluble in the lungs according to EU guidelines 97/69/EC. Note Q for biopersistence.

Flexible Endothermic Mat

3M™ Interam™ Endothermic Mat E-5A-4

When properly installed, 3M™ Interam™ Endothermic Mat E-5A-4 provides a uniform covering that, when exposed to high temperatures, releases chemically-bound water to cool the outer surfaces of the protected item and significantly retard heat transfer. Helps protect structural steel components for up to four hours, critical electrical components for up to three hours and wall opening membranes for up to two hours. Applied to the back and sides of metallic utility boxes, this product helps achieve an equal F-rating and T-rating in membrane penetrations of rated wall assemblies. 3M™ Interam™ Endothermic Mat E-5A-4 is non-flame supporting with low-smoke evolution. The mat is flexible which aids in installation and allows it to more easily be applied on complex shapes and around corners.

- Up to 4-hour protection for structural steel (ASTM E119/UL 263 and ASTM E 1725/UL 1709), up to 3-hour electrical circuit protection (ASTM E 1725) and up to 2-hour protection for wall opening membranes (UL 1479)*
- Outstanding performance in high-intensity fires, provides protection against large hydrocarbon pool fires in accordance with ASTM E 1529 (UL 1709)
- Easy to cut and easy to install, flexible mat can even be installed directly over existing conduits fire protection
- Exterior durability when covered with 0.010 in. stainless steel jacketing
- Re-enterable for effective maintenance and inspection

*See System details for layering requirements.
**Tapes**

3M™ Fire and Water Barrier Tape FWBT

3M™ Fire and Water Barrier Tape is a self-adhered membrane that provides a tough, elastomeric coating. This product has a unique pressure sensitive adhesive that aggressively sticks and stays stuck to a wide variety of substrates at both high and low temperatures, and will even adhere to damp surfaces.

- Up to 4-hour fire protection in construction joints per ASTM E 1966 (UL 2079)
- Up to 3-hour fire protection in perimeter joints per ASTM E 2307
- Up to 2-hour fire protection in through-penetration applications per ASTM E 814 (UL 1479)
- Elastic material maintains performance with up to ±50% movement capabilities
- Can be installed in temperatures as low as 0°F (18°C) and as high as 120°F (49°C)

3M™ Aluminum Foil Tape 425

3M™ Aluminum Foil Tape 425, dead-soft aluminum foil backing, excellent heat and light reflection to protect against high temperatures and U.V. degradation. The foil also serves as an excellent barrier against moisture, dust, flame and certain chemicals. Acrylic adhesive supplies superior temperature, U.V. and solvent resistance. It provides excellent age life and is ideal for harsh, long-term outdoor environments. Meets F.A.R. 25.853(a), O447.

- Used to seal cut edges of 3M™ Interam™ Endothermic Mat E-5A-4 in order to complete total encapsulation
- Thermally-conductive, dead-soft aluminum backing combined with a transparent acrylic adhesive backing
- 4.6 mils thick, aluminum foil backed, 4 in. x 60 yd. roll

3M™ FSK Facing Tape 1525CW

3M™ FSK Facing Tape 1525CW is a conformable, easy-to-apply tape that is used to seal cut edges of 3M™ Fire Barrier Duct Wrap, 3M™ Fire Barrier Plenum Wrap and similar products in order to complete total encapsulation.

- High-performance reinforced insulation tape (Foil/Scrim/Kraft)
- Mold-resistant
- Special acrylic adhesive works in both very cold and hot temperatures
- High-performance reinforced insulation tape (Foil/Scrim/Kraft)
- 5.5 mils thick, 3.89 in. x 50 yd. roll

**Through Penetration Packing Material**

3M™ Fire Barrier Packing Material PM4

3M™ Fire Barrier Packing Material PM4 is designed to be used as an alternative packing material to mineral wool, fiberglass and backer rod in through penetration firestop systems. With excellent strength and flexibility characteristics, it is an ideal through penetration packing material. 3M™ Fire Barrier Packing Material PM4 is an asbestos-free, inorganic material that is mold and fungi resistant when tested in accordance with ASTM C 1338. This installation friendly material is easy to dispense and its compact packaging is optimized for portability. The smooth textured woven material can be torn by hand, eliminating the need for a knife.

- 3M™ Fire Barrier Plastic Pipe Device (PPD)
- 3M™ Fire Barrier Putty Sleeve Kits
- 3M™ Fire Barrier Rated Foam FIP 1-Step
- 3M™ Fire and Water Barrier Tape FWBT
- 3M™ Smoke and Sound Tape SST
- 3M™ Fire Barrier Sealant FD 150+
- 3M™ Fire Barrier Sealant IC 15WB+
- 3M™ Fire Barrier Self-Locking Pillows
- 3M™ Fire Barrier Silicone Sealant 2000+
- 3M™ Fire Barrier Tuck-In Wrap Strips
- 3M™ Fire Barrier Ultra Plastic Pipe Device (UPPD)
- 3M™ Fire Barrier Water Tight Sealant 1000 NS
- 3M™ Fire Barrier Water Tight Sealant 1003 SL
- 3M™ Fire Barrier Water Tight Sealant 3000 WT
- 3M™ Fire Barrier Watertight Spray
- 3M™ Fire Barrier Wrap Strips FS-195+
- 3M™ Fire Barrier Wrap Ultra GS
- 3M™ Fire Block Foam FB-Foam
- 3M™ Fire Block Sealant FB 136
- 3M™ FireDam™ Spray 200
- 3M™ Interam™ Stainless Steel Foil Tape T-65
- 3M™ Marine Fire Wrap
- 3M™ Smoke and Sound Sealant SS 100
- 3M™ Fire Barrier RC-1 Restricting Collar

The above listed products are tested to one or more of the following standards:

- ASTM E 814 (ANSI/UL 1479) Standard Test Method for Fire Tests of Penetration Firestop Systems (under positive furnace pressure of minimum 0.01 inches of water column)
- NFPA 252 Standard Methods of Fire Test and Door Assemblies
- UBC Standard 7-2(97)
- IMO Res. A.754(18)
- ASTM E 136 Standard Test Method for Behavior of Material in a Vertical Tube Furnace at 750°C
- ASTM C 1241 Standard Test Method for Volume Shrinkage of Latex Sealants During Cure
- CAN/ULC S115 Standard Method of Fire Tests of Firestop Systems

These products are formulated without asbestos, polychlorinated biphenyls (PCBs) or lead.

3M FIRE PROTECTION PRODUCTS

Product Category: Wrap Products

- 3M™ Fire Barrier Duct Wrap 615
- 3M™ Fire Barrier Duct Wrap 615+
- 3M™ Interam™ I-10 Series Mats
- 3M™ Interam™ E-5 Series Mats
- 3M™ Fire Barrier Plenum Wrap 5A+
- 3M™ Fire Barrier Duct Wrap Collars

These Products are tested to one or more of the following standards:

- UL 1978 Grease Duct 1 or 2 hour Shaft Enclosure (Sections 12 and 13)
- ICC-ES AC101 Grease Ducts, Flexible Enclosure Systems
- ASTM E 814 (ANSI/UL 1479) Fire Tests of Through-Penetration Fire Stops
- ASTM E 84 (ANSI/UL 723) Surface Burning Characteristics of Building Materials
- ASTM E 136 Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C
- ASTM C 411 Hot Surface Performance of High Temperature Thermal Insulation
- UL 910 Test Method for Fire and Smoke Characteristics of Cables
- UL 1887 Fire Test of Plastic Sprinkler Pipe for Visible Flame and Smoke Characteristics
- NFPA 262 Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces

No asbestos, PCBs or lead are used or contained in these products.

3M FIRE PROTECTION PRODUCTS
Issued by: Rick Heidick

The following 3M products do not have a shelf life requirement when stored indoors:

- 3M™ Expantrol™ Flexible Intumescent Strip E-FIS
- 3M™ Fire Barrier Block B258
- 3M™ Fire Barrier Cast-In Devices and Accessories
- 3M™ Fire Barrier Composite Sheet CS-195+
- 3M™ Fire Barrier Duct Wrap 15A
- 3M™ Fire Barrier Duct Wrap 20A
- 3M™ Fire Barrier Duct Wrap 615
- 3M™ Fire Barrier Duct Wrap 615+
- 3M™ Fire Barrier Duct Wrap Collars
- 3M™ Fire Barrier Grease Duct Access Doors
- 3M™ Fire Barrier Moldable Putty+ Pads (MPP+)
- 3M™ Fire Barrier Moldable Putty+ Sticks (MP+)
- 3M™ Fire Barrier Packing Material PM4
- 3M™ Fire Barrier Pass-Through Devices
- 3M™ Fire Barrier Pillows
- 3M™ Fire Barrier Plank PK39
- 3M™ Fire Barrier Plastic Pipe Device (PPD)
- 3M™ Fire Barrier Plug 2 in. PLG2
- 3M™ Fire Barrier Plug 4 in. PLG4
- 3M™ Fire Barrier Putty Sleeve Kits
- 3M™ Fire Barrier RC-1 Restricting Collar
- 3M™ Fire Barrier Self-Locking Pillows
- 3M™ Fire Barrier Tuck-In Wrap Strips
- 3M™ Fire Barrier Ultra Plastic Pipe Device (UPPD)
- 3M™ Fire Barrier Ultra RC Pack
- 3M™ Fire Barrier Wrap Strips FS-195+
- 3M™ Fire Barrier Wrap Ultra GS
- 3M™ Interam™ E-5 Series Mats
- 3M™ Interam™ I-10 Series Mats
- 3M™ Marine Fire Wrap

The following 3M products have shelf lives:

- 3M™ Aluminum Foil Tape 425
- 3M™ Fire and Water Barrier Tape FWBT
- 3M™ Fire Barrier Mortar
- 3M™ Fire Barrier Rated Foam FIP 1-Step
- 3M™ Fire Barrier Sealant CP 25WB+
- 3M™ Fire Barrier Sealant FD 150+
- 3M™ Fire Barrier Sealant IC 15WB+
- 3M™ Fire Barrier Silicone Sealant 2000+
- 3M™ Fire Barrier Water Tight Sealant 1000 NS
- 3M™ Fire Barrier Water Tight Sealant 1003 SL
- 3M™ Fire Barrier Water Tight Sealant 3000 WT
- 3M™ Fire Barrier Watertight Spray
- 3M™ Fire Block Foam FB-Foam
- 3M™ Fire Block Sealant FB 136
- 3M™ FireDam™ Spray 200
- 3M™ Interam™ FireDam™ 150 Caulk
- 3M™ Interam™ Stainless Steel Tape T-65
- 3M™ Smoke and Sound Sealant SS 100
- 3M™ Smoke and Sound Tape SST

Shelf life and lot number interpretation is listed on the following pages.
Shelf life and lot number interpretation is listed below, on the previous page and on the following page.

3M™ Fire Block Sealant FB 136
• Shelf life of 12 months from date of packaging when stored in original unopened container at 68°F (20°C);
  FB 136 Sealant is also Freeze-Thaw Stable, however, for maximum shelf life store between 33°F (1°C) and 90°F (32°C)
• 10.1 fl. oz. cartridges
  YYDDD-X  Example: 14002-1
  14 = Last two digits of year of production
  002 = Julian Date of production
  -1 = Lot number of bulk product (January 2, 2014 would be the date of packaging)

3M™ Fire Barrier Watertight Spray
• Shelf life is 12 months from date of manufacture when stored below 100°F (38°C)
• Store indoors in dry conditions; It is recommended that the pails of product remain in heated storage above 40°F (4°C) prior to spraying material
• Spray has been cycled from 10–70°F (12–21°C) up to 10 times with no significant effects to product performance
• 5 gallon pail
  YYDDD-X  Example: 7039AS
  7 = Last digit of year manufactured
  039 = Julian Date
  AS = Random characters to distinguish between lot numbers (February 8, 2017 would be the date of packaging)

3M™ FireDam™ Spray 200
• Shelf life is 18 months from date of packaging when stored above 40°F (4°C)
• 5 gallon pail
  YDDDXX  Example: 5183AS
  5 = Last digit of year manufactured
  183 = Julian Date
  AS = Random characters to distinguish between lot numbers (July 2, 2015 would be the date of packaging)

3M™ Fire Barrier Mortar
• Shelf life of bagged product is 3 years from date of packaging when stored in original unopened bags in dry, indoor conditions
• Shelf life of plastic pail product is indefinite when stored in original unopened pails in dry, indoor conditions
• 28 lb. plastic pail and 44 lb. poly-lined paper bag
  YDDDXX  Example: 5183AS
  5 = Last digit of year manufactured
  183 = Julian Date
  AS = Random characters to distinguish between lot numbers (July 2, 2015 would be the date of packaging)

3M™ Fire Block Foam FB-Foam
• Shelf life of 15 months from date of packaging in original unopened packages; See bottom of can for expiration date and lot information
• 12.0 fl. oz. can
  YDDDXX  Example: 5183AS
  5 = Last digit of year manufactured
  183 = Julian Date
  AS = Random characters to distinguish between lot numbers (July 2, 2015 would be the date of packaging)

3M™ Smoke and Sound Sealant SS 100
• Shelf life is 18 months in original unopened containers from date of packaging when stored above 68°F (20°C) and below 90°F (32°C)
• 20.0 oz. sausages, 28.0 fl. oz. cartridges and 4.5 gallon pails
  MMDDYY-X  Example: 063015-1
  063015 = Date of Production
  -1 = Shift number (June 30, 2015 would be the date of packaging)
Shelf life and lot number interpretation is listed below and on the following pages.

**3M™ Fire Barrier Sealant CP 25WB+ and 3M™ Fire Barrier Sealant IC 15WB+**
- Shelf life is 12 months in original unopened containers from date of packaging when stored above 68°F (20°C)
- **CP 25WB+** is available in 10.1 fl. oz. cartridges, 20.0 fl. oz. sausages, 27.0 fl. oz. cartridges, 2 gallon pails and 5 gallon pails
- **IC 15WB+** is available in 10.1 fl. oz., 20.0 fl. oz. sausages and 4.5 gallon pails

YDDDXX  Example: 5183AS
- 5       = Last digit of year manufactured
- 183     = Julian Date
- AS      = Random characters to distinguish between lot numbers (July 2, 2015 would be the date of packaging)

**3M™ Fire Barrier Sealant FD 150+**
- Shelf life of 18 months from date of packaging when stored in original unopened container at 68°F (20°C)
- 10.1 fl. oz. cartridges, 20.0 fl. oz. sausages, 28.0 fl. oz. cartridges and 4.5 gallon pails

AAMMDDYY-XL  Example: BN092214-02
- AA  = BN  →  Blue, RN  →  Red, LN  →  Limestone
- 09  = Month of Production
- 22  = Day of Production
- 14  = Last two digits of the year of production
- -02  = Consecutive batch number on that date (August 22, 2014 would be the date of packaging)

**3M™ Fire Barrier Water Tight Sealant 3000 WT**
- Shelf life is 12 months in original unopened containers from date of packaging when stored above 68°F (20°C)
- 10.1 fl. oz. cartridges, 20.0 fl. oz. sausages and 4.5 gallon pails

MMDDYY-X  Example: 100115-1
- 100115 = Date of Production
- 1      = Consecutive batch number on that date (October 1, 2015 would be the date of packaging)

**3M™ Fire Barrier Water Tight Sealant 1003 SL and 3M™ Fire Barrier Water Tight Sealant 1000 NS**
- Shelf life is 18 months in original unopened containers from date of packaging when stored between 40°F and 90°F (4°C and 32°C)
- 10.1 fl. oz. cartridges, 20.0 fl. oz. sausages and 4.5 gallon pails

MMDDYY-X  Example: 100115-1
- 100115 = Date of Production
- 1      = Consecutive batch number on that date (October 1, 2015 would be the date of packaging)

**3M™ Fire Barrier Rated Foam FIP 1-Step**
- Shelf life is 16 months in original unopened containers from date of packaging when stored above 68°F (20°C) and below 90°F (32°C)
- 12.85 fl. oz. cartridges

YDDDXX  Example: 5183AS
- 5       = Last digit of year manufactured
- 183     = Julian Date
- AS      = Random characters to distinguish between lot numbers (July 2, 2015 would be the date of packaging)

**3M™ Fire Barrier Silicone Sealant 2000+**
- Shelf life of 18 months from date of packaging when stored below 90°F (32°C) in original unopened container
- 10.3 fl. oz. cartridges and 4.5 gallon pails

“Use by” date printed on each unit
Shelf life and lot number interpretation is listed below and on the previous pages.

3M™ Fire and Water Barrier Tape FWBT and 3M™ Smoke and Sound Tape SST
• 3M™ Fire and Water Barrier Tape should be stored indoors in dry conditions in the original packaging.

To obtain best performance, use this product within 24 months from date of manufacture which can be determined from the lot number (found on the label inside of the cardboard core). The label format is as follows: Name of tape – Work order number – Lot number (e.g. FWBT – 123456 – 634501)

YDDDDXX  Example: 634501
  6 = Year of Manufacture
  345 = Julian Date of Manufacture
  01 = Julian Date of Manufacture (December 10, 2016 would be the date of manufacturing)

3M™ Aluminum Foil Tape 425
• Shelf life of 24 months from date of manufacturing when stored in original unopened container at 68°F (20°C)

MMM-YYDDDD  Example: DWB-14154
  DWB = Manufacturing Location
  -14 = Year of Manufacture
  154 = Julian Date of Manufacture (June 3, 2014 would be the date of manufacturing)

3M™ Interam™ Stainless Steel Tape T-65
• Shelf life of 24 months from date of manufacturing when stored in original unopened container at 68°F (20°C)

These products use the P.O. number as the lot number.
How to Use the UL Numbering System

Through Penetration Numbering System

For Through Penetration Firestopping, UL uses an alphanumeric system to categorize the type of construction along with the penetrating item(s).

By following the guidelines of the chart below, you can achieve a basic understanding of each system and its uses.

**EXAMPLE – UL system C-AJ-1044 translates to:**

- **C** = Either floor or wall is penetrated
- **A** = Concrete floors with a minimum thickness less than or equal to 5”
- **J** = Concrete walls with a minimum thickness less than or equal to 8”
- **1044** = Metallic pipe, conduit or tubing as penetrating items.

The details vary within each system in a category such as, maximum pipe size, annular distances, products used, etc.

Joint Numbering System

The systems are identified in this category by an Alpha-Numeric identification system. The alpha components identify the type of joint system and whether the joint system has movement capabilities.

The numeric components identify the nominal joint width. In the case of head of wall joint systems, the width of the joint does not include the voids created under the crests of metal deck floor or roof systems.

The first two alpha characters identify the type of joint system as follows:

The third alpha character is either S or D. The S signifies joint systems which do not have movement capabilities. The D signifies joint systems which do have movement capabilities.

The numeric component uses sequential numbers to identify the nominal width of the joint systems. The significance of the number used is:

<table>

Note: Systems from Warnock Hersey and Intertek/Omega Point Laboratories use a different numbering system.
Underwriters Laboratories Inc. Explanation
Through Penetration Firestop Systems (XHEZ)

This category covers firestop systems, which are specific constructions consisting of a wall or floor assembly, a penetrating item passing through an opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the openings. The specifications for materials in a firestop system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems. Additionally, the substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

The firestop systems covered under this category have been investigated with a positive furnace pressure differential of at least 0.01 in. of water maintained at a distance of 12 in. below horizontal test assemblies and 0.78 in. below the fill materials surrounding the penetrating items passing through vertical test assemblies. The Classifications of firestop systems contemplate installation in heated and air conditioned environments unless stated otherwise in the description of the system.

ANSI/UL 1479, “Fire Tests of Through-Penetration Firestops,” defines the criteria for hourly F, T, L and W ratings for firestop systems. The F-rating criteria prohibits flame passage through the system and requires acceptable hose-stream test performance. The T-rating criteria prohibits flame passage through the system and requires the maximum temperature rise on the unexposed surface of the wall or floor assembly, on the penetrating item and on the fill material not to exceed 325°F (181°C) above ambient, and requires acceptable hose-stream test performance.

The L-rating criteria determines the amount of air leakage, in cu feet per minute per square foot of opening (CFM/sq ft) or in cu feet per minute per unit (CFM/unit) for fixed-size opening units, through the firestop system at ambient and/or 400°F air temperatures at an air-pressure differential of 0.30 in. W.C. The L ratings are intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems for the protection of penetrations and miscellaneous openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101, “Life Safety Code.”

The Class 1 W rating determines the capability of the firestop system to maintain watertightness of the penetration through a floor or wall construction at ambient air conditions under 3 ft of water pressure head (1.3 psi) for a period of 72 hours. The W rating may be applicable for building structures whose floors are subjected to incidental standing water and/or for buildings that house critical equipment as described in ANSI/NFPA 75, “Protection of Information Technology Equipment,” and ANSI/NFPA 76, “Fire Protection of Telecommunications Facilities.”

Acceptance is based upon the ability of the firestop system to withstand the applied pressure without the passage of any water through the firestop system. After the Class 1 watertightness test, the firestop system is conditioned in accordance with the requirements of ANSI/UL 1479 and the fire and hose stream tests described in the standard are conducted.

The W rating is intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems in applications where submersion in water may be a factor.

Materials used in the firestop systems are intended to be installed in accordance with the manufacturer’s instructions provided with the materials. The structural integrity of the floor or wall assembly needs to be investigated when providing openings for the penetrating items. The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual Classifications under Fill, Void or Cavity Materials (XHHW) for the investigated percentage of shrinkage.

The minimum and/or maximum annular space referenced in the firestop system must be maintained in order to achieve the hourly rating of the system. The annular space of a penetrating item through a rectangular opening is determined by measuring the distance from the closest point of the penetrating item to a point perpendicular to each of the four sides of the opening. The diagonal dimension is not intended to represent the annular space of a rectangular opening. The annular space between multiple penetrating items within a rectangular opening is determined by measuring the closest point of one penetrating item to the closest point of the adjacent penetrating item.
ANSI/NFPA 90A, “Installation of Air-Conditioning and Ventilating Systems,” contains requirements on the use of fire dampers in conjunction with ventilation ducts. Unless specifically indicated as part of the Classification of the damper, the annular space around the damper sleeve should not be firestopped with the materials described herein.

The systems covered under this category are Classified with respect to (1) installation in a wall only, (2) installation in a floor only or (3) installation in either a wall or a floor. Unless otherwise indicated in the systems, the ratings for firestop systems installed in walls apply when either face of the wall is exposed to fire. The ratings for firestop systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-endurance rating of the walls and floors incorporating these systems are not indicated. Volume 1 of the Fire Resistance Directory covers the hourly fire-endurance ratings of floor and wall assemblies. Firestop systems that specify installation in concrete floors may include installation in floors consisting of fluted or corrugated steel deck topped with structural concrete, provided that (1) the concrete topping thickness measured above the top plane of the steel deck is equal to or greater than the minimum concrete thickness specified in the system, and (2) the firestop system does not require any portion of the forming material or fill material to extend below the bottom plane of the floor.

Some firestop systems specify the use of hollow-core precast concrete unit floor assemblies. Where not specified, firestop systems utilizing caulk, sealant, putty or spray materials installed over a mineral wool or ceramic blanket may be installed in hollow-core floors, provided that (1) the thickness of the hollow-core floor is equal to or greater than the minimum concrete thickness specified in the system, (2) the maximum size of the opening is 7 in. diameter or 7 in. by 7 in., and (3) any cores of the precast concrete units penetrated as a result of the firestop system are sealed with a minimum 4 in. depth of either firmly packed minimum 4 pcf mineral wool or ceramic fiber blanket, or concrete, grout or mortar. Additionally, firestop systems utilizing a firestop device or wrap strips/steel collar installed around the penetrant beneath the floor may be installed in hollow-core floors, provided that (1) the thickness of the hollow-core floor is equal to or greater than the minimum concrete thickness specified in the system, and (2) the maximum size of the opening is 7 in. diameter or 7 in. by 7 in.

ANSI/NFPA 70, “National Electrical Code” (NEC), contains requirements for permissible installation and percentages of electrical conductor fill for conduit, cable trays and other electrical conductor raceways.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

Penetrating Items
When the penetrating item is indicated as being conduit, the conduit is intended for use as a raceway for electrical conductors in accordance with the NEC. Electrical conductors may be used without conduit only when permitted by and installed in accordance with the NEC, and when the conductors are specifically described in the firestop system. The maximum conductor size and the maximum number of conductors in the individual cables are specified in each system. All electrical conductors are intended to be copper unless indicated otherwise in the system.

When the penetrating item is indicated as being pipe, the pipe is intended for the transport of gases, liquids and the like. The maximum diameter, the minimum wall thickness and the specific material for conduit and pipes are specified in each system. All nonmetallic pipe is intended to be of the solid-core type unless indicated otherwise in the system.

Further specifications for the various types of penetrating items may be found in the documents referenced below:

Where the individual system specifies the penetrating item is to be rigidly supported on both sides of wall or floor, the support system should be designed based upon the premise the firestop system provides no support.

Where the penetrating item is indicated as a metallic pipe, conduit, tube, duct or cable, and the firestop system consists of a fill material (such as sealants, putty or mortar) and a packing material, the penetrant may pass through the opening in the wall or floor assembly at an angle, provided the annular space is maintained on both sides of the wall or floor assembly. In all other cases, except where otherwise indicated in the system, the penetrating item should penetrate the wall or floor assembly at a 90° angle.

Some systems do not include penetrating items. These firestop systems are intended to be used to seal openings where the penetrating items have been removed or where the penetrating items have not yet been installed.

**Forming Materials**
Forming materials specified for a firestop system should not be removed after cure of the fill material, unless removal is specified in the description of the system.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in ANSI/UL 1479 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

**Fill Materials**
When more than one fill, void or cavity material is specified under a single item number within a firestop system, it is intended that any single one of the materials may be used.

**Conductor Ampacity**
Where indicated in the system, the ampacity reduction due to the firestop system has been determined in accordance with UL Subject 1712, “Outline of Investigation for Tests for Ampacity of Insulated Electrical Conductors Installed in Fire Protective Systems.” If not specified in the individual system, the effect of the firestop system on the ampacity of electrical conductors has not been investigated.

**Numbering System**
The systems are identified in this category by an alphabetic identification system. The alpha components identify the type of assembly being penetrated and the numeric component identifies the type of penetrating item.

The first alpha component is an F, W or C. The F signifies a floor is being penetrated, the W signifies a wall is being penetrated, and C signifies either a floor or a wall is being penetrated.
Underwriters Laboratories Inc. Explanation

Through Penetration Firestop Systems (XHEZ) – continued

The second alpha component may be any letter. The significance of the letter used is:

<table>
<thead>
<tr>

Additional Information
For additional information, see Fire Resistance Ratings (BXRH).

Requirements
The basic standard used to investigate products in this category is ANSI/UL 1479 (ASTM E814 [2002]), "Fire Tests of Through-Penetration Firestops."

Where indicated in the individual Classifications under Joint Systems (XHBN) and Fill, Void or Cavity Materials (XHHW), fill, void or cavity materials have also been investigated to ASTM C1241 (2000), "Standard Test Method for Volume Shrinkage of Latex Sealants During Cure."

UL Mark
Those materials identified by an (*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Underwriters Laboratories Inc. Explanation  
Joint Systems (XHBN)

This category covers joint systems, which are specific constructions consisting of adjacent wall and/or floor assemblies and the materials designed to prevent the spread of fire through a linear opening between the wall and/or floor assemblies. The specifications for materials in a joint system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems. Additionally, the substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

The Classification of joint systems contemplate installation in heated and air-conditioned environments unless stated otherwise in the description of the system.

Materials used in the joint systems are intended to be installed in accordance with the manufacturer’s instructions provided with the material. The structural integrity of the floor or wall assembly has not been investigated as a result of the openings.

When the joint system specifies the insulation material is to be compressed prior to installation into the joint, the uncompressed thickness necessary can be calculated as follows:

\[
 T_{\text{uncomp}} = \frac{(W_{\text{nom}} \times 100)}{(100 - I_{\text{comp}})}
\]

Where:

\( T_{\text{uncomp}} \) = Uncompressed Thickness Necessary, In.
\( I_{\text{comp}} \) = Insulation Compression Percentage Specified in System, X%
\( W_{\text{nom}} \) = Nominal (Installed) Joint Width, In.

Unless otherwise indicated in the systems, the ratings for joint systems installed in walls apply when either face of the wall is exposed to fire. The ratings for joint systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-resistance ratings of the floor and wall assemblies in which, or between which, the joint system is intended to be installed are covered under Fire Resistance Ratings (BXUV). Where the individual joint system references back to fire-resistance designs, all construction details of the individual design are intended to be followed. In addition, all details relative to the construction of the wall or floor assembly contained in the individual joint system are intended to be followed. Where the construction details shown in the fire-resistance design and the joint system differ, such as in stud size and spacing, fastener spacing, etc., the most restrictive construction details prevail.

Floor-to-floor and floor-to-wall joint systems that specify installation in concrete floors may include installation in floors consisting of fluted or corrugated steel deck topped with structural concrete, provided that (1) the concrete topping thickness measured above the top plane of the steel deck is equal to or greater than the minimum concrete thickness specified in the joint system, and (2) the joint system does not require any portion of the forming material or fill material to extend below the bottom plane of the floor.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in ANSI/UL 1479 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

The joint sealant material thickness published in the fire-resistance designs is measured wet (unless otherwise specified in the individual systems) and may be susceptible to a percentage of shrinkage during the curing process. Joint systems are investigated after the sealant materials are fully cured. Refer to the individual Classifications for the investigated percentage of shrinkage.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.
Underwriters Laboratories Inc. Explanation
Joint Systems (XHBN) – continued

Numbering System
The systems are identified by an alphanumeric identification system. The alpha components identify the type of joint system and whether the joint system has movement capabilities. The numeric components identify the nominal joint width. In the case of head-of-wall joint systems, the width of the joint does not include the voids created under the crests of metal deck floor or roof systems.

The first two alpha characters identify the type of joint system as follows:

<table>
<thead>
<tr>
<th>Alpha Characters</th>
<th>Description of Joint System</th>
</tr>
</thead>
<tbody>
<tr>
<td>FF</td>
<td>Floor-to-floor</td>
</tr>
<tr>
<td>WW</td>
<td>Wall-to-wall</td>
</tr>
<tr>
<td>FW</td>
<td>Floor-to-wall</td>
</tr>
<tr>
<td>HW</td>
<td>Head-of-wall</td>
</tr>
<tr>
<td>BW</td>
<td>Bottom-of-wall</td>
</tr>
<tr>
<td>CG</td>
<td>Wall-to-wall joints intended for use as corner guards</td>
</tr>
</tbody>
</table>

The third alpha character is either S or D. The S signifies joint systems that do not have movement capabilities. This D signifies joint systems that do have movement capabilities. The numeric component uses sequential numbers to identify the nominal width of the joint systems. The significance of the number used is:

<table>
<thead>
<tr>
<th>Number. Range</th>
<th>Nom Joint Width</th>
</tr>
</thead>
<tbody>
<tr>
<td>0000 - 0999</td>
<td>Less than or equal to 2 in.</td>
</tr>
<tr>
<td>1000 - 1999</td>
<td>Greater than 2 in. and less than or equal to 6 in.</td>
</tr>
<tr>
<td>2000 - 2999</td>
<td>Greater than 6 in. and less than or equal to 12 in.</td>
</tr>
<tr>
<td>3000 - 3999</td>
<td>Greater than 12 in. and less than or equal to 24 in.</td>
</tr>
<tr>
<td>4000 - 4999</td>
<td>Greater than 24 in.</td>
</tr>
</tbody>
</table>

Additional Information
For additional information, see Fire Resistance Ratings (BXRH).

Requirements
The basic standard used to investigate products in this category is ANSI/UL 2079, "Tests for Fire Resistance of Building Joint Systems."

ANSI/UL 2079 defines four types of joint systems: floor-to-floor, wall-to-wall, floor-to-wall and head-of-wall. In addition, bottom-of-wall joint systems have been investigated using the general methods and conditions of acceptance specified for the four defined types of joint systems.

All joint systems covered under this category have been investigated with a minimum positive furnace pressure differential of 0.01 in. of water maintained at a distance of 12 in. below horizontal test assemblies and at the mid-height of vertical test assemblies.

ANSI/UL 2079 requires joint systems with movement capabilities to be cycled through the intended range of movement prior to the fire test. The movement cycling is intended to demonstrate the compatibility between the individual components of the joint system and the fire resistive assembly. Joint systems are required to be cycled through the intended movement range 500 or 100 complete movement cycles at a minimum rate of 1, 10 or 30 cycles per minute prior to the fire test.

Joint systems with movement capabilities are noted through the appearance of a Class I, II and/or III designation included as part of the heading information. The definitions of the movement class designations are as follows:

<table>
<thead>
<tr>
<th>Movement Class</th>
<th>Min No. of Cycles</th>
<th>Min Cycling Rate (Cycles Per Min)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class I</td>
<td>500</td>
<td>1</td>
</tr>
<tr>
<td>Class II</td>
<td>500</td>
<td>10</td>
</tr>
<tr>
<td>Class III</td>
<td>100</td>
<td>30</td>
</tr>
</tbody>
</table>
Underwriters Laboratories Inc. Explanation
Joint Systems (XHBN) – continued

Each joint system with movement capabilities specifies a nominal joint width and the movement capabilities, expressed in either a numerical value or as a percent of the nominal joint width. When the compression or extension movement capabilities are expressed as a percent, the minimum and maximum joint widths that the joint system can accommodate are calculated as follows:

\[
\begin{align*}
W_{\text{min}} & = W_{\text{nom}} \left[ 1 - \left( \frac{\% \text{ Comp}}{100} \right) \right] \\
W_{\text{max}} & = W_{\text{nom}} \left[ 1 + \left( \frac{\% \text{ Ext}}{100} \right) \right]
\end{align*}
\]

Where:
- \(W_{\text{min}}\) = Minimum Joint Width, In.
- \(W_{\text{nom}}\) = Nominal Joint Width, In.
- \(\% \text{ Comp}\) = Movement Capability in Compression Direction, Percent and
- \(W_{\text{max}}\) = Maximum Joint Width, In.
- \(W_{\text{nom}}\) = Nominal Joint Width, In.
- \(\% \text{ Ext}\) = Movement Capability in Extension Direction, \(X\%\)

When the shear movement capabilities are expressed as a percent, the shear movement capabilities in inches that the joint system can accommodate are calculated as follows:

\[
\begin{align*}
\text{Shear} & = W_{\text{nom}} \left( \frac{\% \text{ Shear}}{100} \right)
\end{align*}
\]

Where:
- \(\text{Shear}\) = Shear Movement, In.
- \(W_{\text{nom}}\) = Nominal Joint Width, In.
- \(\% \text{ Shear}\) = Shear Movement, \(X\%\)

All joint systems have been tested at their maximum joint width and maximum shear capabilities.

Joint systems intended to be load bearing are investigated with respect to the ability to carry the load during the fire test. The load-carrying capacity of such joints is noted in the individual joint system.

The conditions of acceptance in ANSI/UL 2079 provide criteria for an assembly rating with an optional L rating and/or W rating. The L-rating criteria determines the amount of air leakage, in cubic feet per minute per linear foot of joint opening (CFM/LIN Ft), through the joint system at ambient and/or 400°F air temperature at an air pressure differential of 0.30 in. W.C. The L ratings are intended to assist Authorities Having Jurisdiction, and others, in determining the suitability of joint systems for the protection of openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101, “Life Safety Code.”

The W rating, identified as Class 1, determines the capability of the joint system to maintain watertightness at ambient air conditions under 3 ft of water pressure head (1.3 psi) for a period of 72 hours. The W rating may be applicable for building structures whose floors are subjected to incidental standing water and/or for buildings that house critical equipment as described in ANSI/NFPA 75, “Protection of Information Technology Equipment,” and ANSI/NFPA 76, “Fire Protection of Telecommunications Facilities.”

The surface flammability and smoke development characteristics of Classified materials used in joint systems are measured by the test method in ANSI/UL 723 (ASTM E84 and NFPA 255), “Test for Surface Burning Characteristics of Building Materials.” The flame spread index of these materials is less than 200 and the smoke developed index is less than 450. Surface burning characteristics Classifications are covered under Surface Burning Characteristics (BIKT).

Where indicated in the individual Classifications, joint sealant materials have also been investigated to ASTM C1241 (2000), “Standard Test Method for Volume Shrinkage of Latex Sealants During Cure.”

UL Mark
Those materials identified by an (*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Use and Installation

This category covers perimeter fire-containment systems, which are specific constructions consisting of a floor with an hourly fire-endurance rating, an exterior curtain wall with no hourly fire-endurance rating, and material installed to fill gaps between the floor and the curtain wall to prevent the vertical spread of fire in a building. The hourly ratings apply only to the complete systems. The individual components are not assigned ratings and are not intended to be interchanged between systems.

The specifications for materials in a perimeter fire-containment system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. Materials used in these perimeter fire-containment systems are intended to be installed in accordance with the manufacturer’s instructions provided with the material. The substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

All perimeter fire-containment systems have been tested with the curtain wall at the maximum clearance distance from the floor.

Curtain wall spandrel panel dead-load anchors located below the concrete floor should be protected from direct fire exposure. When lateral anchors or braces are required to be used with the curtain wall spandrel panels, the lateral anchors or braces located beneath the concrete floor should also be protected from direct fire exposure. The protection for the anchors and braces may consist of a fire-resistive ceiling membrane, spray-applied fire-resistive material, or other protective material with known hourly fire-resistive properties.

The Classification of perimeter fire-containment systems contemplate installation in heated and air-conditioned environments unless stated otherwise in the description of the system.

 Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

Ratings

Ratings for some perimeter fire-containment systems may also include an Integrity Rating, an Insulation Rating and a Leakage Rating. These perimeter fire-containment systems were tested in compliance with ANSI/ASTM E2307, “Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus,” but the required minimum pressure of 0.01 in. of water was maintained 12 in. below the floor, as compared to the lowest point of the perimeter joint as specified in ANSI/ASTM E2307. This practice ensures a higher level of positive pressure beneath the lowest point of the perimeter joint and this exceeds the minimum requirement specified in ANSI/ASTM E2307.

The criteria for the Integrity Rating complies with the requirements for the “F Rating” of ANSI/ASTM E2307, but also limits the passage of flame through openings in the curtain wall above the perimeter fire-barrier system.

The criteria for the Insulation Rating complies with the “T Rating” of ANSI/ASTM E2307, but also limits the temperature rise to 325°F above the starting temperature on the interior surface of the curtain wall.

The criteria for the Leakage Rating (“L Rating”) is a measure of the amount of air leakage, in cubic feet per minute per linear foot, through the perimeter fire-containment system at ambient and/or 400°F air temperature at an air pressure differential of 0.30 in. of water. The “L Rating” is intended to assist Authorities Having Jurisdiction and others in determining the suitability of perimeter fire-containment systems for restricting the movement of smoke in accordance with ANSI/NFPA 101, “Life Safety Code.”

Numbering System

The systems are identified in this category by an alpha-alphanumeric identification system. The first two alpha characters, CW, identify the perimeter fire-containment system as being for use at the interface of a fire-rated floor and a nonfire-rated exterior curtain wall. The third alpha character is either S or D. The S signifies perimeter fire-containment systems that do not have movement capabilities (i.e., Static). The D signifies fire-containment systems that do have movement capabilities (i.e., Dynamic). The numeric component uses sequential numbers to identify the maximum clearance distance between the curtain wall and the perimeter of the floor. The significance of the number used is:
Requirements
The basic standard used to investigate the systems in this category is ANSI/ASTM E2307-04, “Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus.”

Two hourly ratings are defined for each perimeter fire-containment system: the “T Rating” and the “F Rating.” The “T Rating” is a measure of the ability of the perimeter fire-containment system to limit the temperature rise on the unexposed surface of the perimeter fire-containment system and the adjacent supporting construction as defined in ANSI/ASTM E2307. The “F Rating” is a measure of the perimeter fire-containment system to limit flame penetration through the system or around its boundaries and the passage of flames and hot gases sufficient to ignite cotton waste as defined in ANSI/ASTM E2307.

The test method requires joint systems with movement capabilities to be cycled through the intended range of movement prior to the fire test. The movement cycling is intended to demonstrate the compatibility between the individual components of the joint system and the supporting construction. Joint systems are required to be cycled through the intended movement range 500 or 100 complete movement cycles at a minimum rate of 1, 10 or 30 cycles per minute prior to the fire test. Perimeter fire-containment systems with movement capabilities are noted through the appearance of a Class I, II and/or III designation included as part of the heading information. The definitions of the movement class designations are as follows:

<table>
<thead>
<tr>
<th>Movement Class</th>
<th>Min No. of Cycles</th>
<th>Min Cycling Rate (Cycles Per Min)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class I</td>
<td>500</td>
<td>1</td>
</tr>
<tr>
<td>Class II</td>
<td>500</td>
<td>10</td>
</tr>
<tr>
<td>Class III</td>
<td>100</td>
<td>30</td>
</tr>
</tbody>
</table>

Each perimeter fire-containment system with movement capabilities specifies a nominal opening width and the movement capabilities, expressed in either a numerical value or as a percent of the nominal opening width. When the shear movement capabilities are expressed as a percent, the shear movement capabilities in inches which the joint system can accommodate can be calculated as follows:

\[
\text{Shear} = \frac{\text{Shear Movement, In.}}{\text{Nominal Opening Width, In.}} \times 100
\]

Where:
- \(\text{Shear Movement, In.}\)
- \(\text{Nominal Opening Width, In.}\)
- \(\% \text{ Shear} = \text{Shear Movement, Percent}\)

Additional Information
For additional information, see Fire Resistance Ratings (BXRH).

UI Follow-Up Service
Those materials identified by an (*) in the system description text are eligible to be produced under UL's Follow-Up Service Program.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Underwriters Laboratories Inc. Explanation
Electrical Circuit Protective Systems – Flexible Wraps (FHIT)

General
This category covers electrical circuit protective systems consisting of components and materials intended for installation as protection for specific electrical wiring systems, with respect to the disruption of electrical circuit integrity upon exterior fire exposure.

Ratings apply only to the entire protective system assembly, constructed using the combination of components and materials specified in the individual system. Components and materials are designated for use in a specific individual system for which corresponding ratings have been developed, and are not intended to be interchanged between systems. Ratings are not assigned to individual system components or materials. For example, caulk or putty used from one system cannot be interchanged with the caulk or putty specified in another system.

Electrical circuit protective systems are intended to be fastened to a concrete or masonry wall or a concrete floor-ceiling assembly. The fire rating of the wall or floor-ceiling assembly is intended to be equal to or greater than the rating of the electrical circuit protective system. This is to ensure that the complete electrical circuit protective system will survive during fire and hose stream exposure.

Systems Incorporating Cable Protected with Electrical Circuit Protective Materials
These protective systems are investigated with respect to fire exposure and water hose stream performance. Performance criteria are based on functionality of the cable during the fire and after the water hose stream. ANSI/UL 2196, "Tests for Fire Resistant Cables," describes two fire exposure conditions. The normal temperature rise (to ANSI/UL 263, "Fire Tests of Building Construction and Materials") is intended to represent a fully developed interior building fire. The rapid temperature rise (to ANSI/UL 1709, "Rapid Rise Fire Tests of Protection Materials for Structural Steel") is intended to represent a hydrocarbon pool fire. If not stated otherwise in the individual system, the normal temperature rise exposure was used. There are two hose stream levels: low impact and normal impact. The low-impact fog nozzle hose stream is applied only to cable marked with the "-CI" suffix. The normal-impact hose stream, applied with a standard-taper, smooth-bore playpipe, is applied to all other types of cable.

CI cable is tested on steel rings to simulate installation in free air. If CI cable is intended to be installed in a raceway it is so tested. CI cable that has been tested in a raceway will be specified in the system.

Each design of fire-resistive cable is tested per ANSI/UL 2196. One-conductor and multi-conductor constructions are tested separately, as well as shielded or unshielded, and stranded or solid conductors. The system contains the construction details of the tested configuration. The minimum conductor size, minimum number of conductors, UL Type, voltage rating, etc., are construction details that are also provided. Cable is UL Listed to a National Electrical Code Type and construed to a UL Standard for the cable (such as Type MC per ANSI/UL 1569, "Metal-Clad Cables"; Type RHH/RHW to ANSI/UL 44, "Thermoset-Insulated Wires and Cables"; Type FPL per ANSI/UL 1424, "Cables for Power-Limited Fire-Alarm Circuits"; Type NPLF per ANSI/UL 1425, "Cables for Non-Power-Limited Fire-Alarm Circuits"; and Type TC per ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members").

Cable is tested as a complete system. The system includes the cable and/ or raceway support, couplings, boxes/ conduit bodies, optional splices, vertical supports, grounds, pulling lubricants, cable tray, etc. Cable or raceway supports
need to hold the cable in place during the fire and hose stream. The hardware, clamps, strut, etc., are generally stated to be made of steel.

Systems that require a raceway are tested with the minimum raceway diameter and the minimum raceway type with their respective coupling(s). Raceways having larger diameters are acceptable. Raceways with greater wall thickness are also acceptable. Intermediate metal conduit (IMC) or rigid metal conduit (RMC) are acceptable for use in systems where electrical metallic tubing (EMT) is specified.

The raceway is intended to be connected together using the coupling type referenced in the system, such as steel setscrew type for EMT or threaded types of coupling for IMC and RMC. No other couplings are intended to be used unless noted in the specific system. For example, a compression coupling is not intended to be used in place of a steel setscrew coupling for EMT unless otherwise specified in the system. If IMC or RMC is substituted where EMT is specified, the raceway should be connected together with threaded types of couplings.

If a box, conduit body, supports (such as a grip), splice or other components are tested, it is noted in the system. Otherwise, the hourly fire rating applies only to continuous lengths of cable and/or raceway with couplings passing completely through a fire zone and terminating a minimum of 12 inches beyond the fire-rated wall or floor bounding the fire zone. For systems installed in a raceway, ANSI/NFPA 70, “National Electrical Code” (NEC), requires not more than 360 degrees of bends without a pull point (such as conduit bodies or boxes). Therefore, for most practical installations, a conduit body or a box will be required. Items such as conduit bodies and boxes, if found acceptable, are described in the system. Since boxes are tested with a single raceway, each individual raceway should have an independent box used for pull points or splices. If a splice is tested, it is also described in the system. Boxes should be sized per the method described in the NEC.

The supports are an important part of the systems and each individual system has specific support requirements. The maximum distance between the supports is described in the individual systems and are not intended to be exceeded even if an alternate raceway is used. For example, if 5-feet spacing between supports is specified for EMT, this same support distance should be used with any other raceway (IMC, RMC, etc.), unless stated otherwise in the system or a lesser support spacing is specified in the NEC. The type of support and the distance between the steel supports is unique to that specific system and is for all sizes/types of cable and/or conduit/raceway unless otherwise noted in a specific system. Spacing of the tray support should also be the same as the raceway support spacing unless otherwise noted.

The support requirements are for both the horizontal and vertical configuration unless otherwise noted in a specific system. The supports for both the vertical or horizontal configuration are intended to be the support to the cable/conductor. Cable installed in a vertical raceway is not supported by the raceway. This is in contrast to MI or MC cable, where a support on the outside of the cable also supports the conductors. The ability of cable to support the equivalent cable weight of the maximum distance between cable supports without breaking the conductor, and compatibility/mechanical considerations of the cable support mechanism may be investigated in the test by simulating the weight of the vertical cable run. When so investigated, the maximum vertical distance tested and the cable support mechanism(s) are detailed in the system.

Compatibility of materials used in fire-rated systems is also a concern. Some materials can provide carbon residue that is conductive, or conductive gases that can cause premature failure. A dedicated raceway is the required configuration unless otherwise noted in the system (such as the option of bare ground wires or insulated ground wires). The bare or insulated ground wire may be of special manufacture to be compatible with the system. The system will specify the manufacturer of an allowable ground wire. If not specified, the ground should be the same as the fire-rated wire described in the system. Use of any other ground wire violates the system fire rating. For example, THHN ground wire is not intended to be used with a fire-rated system unless specified in the system. If a pulling lubricant has been tested with the system, it will be so noted in the system.

These systems are intended to be installed in accordance with all provisions of the NEC and as amended by the details of each individual system (such as type of supports and distance between supports).

Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these systems.

Related Products
Fire-resistive cable with the "-CI" marking is also investigated to ANSI/UL 2196 and is covered under Power-limited Fire Alarm Cable (HNIR) and Nonpower-limited Fire Alarm Cable (HNHT).
Underwriters Laboratories Inc. Explanation

**Electrical Circuit Protective Systems – Flexible Wraps (FHIT) – continued**

**Additional Information**
For additional information, see Fire Resistance Ratings (BXRH).

**Requirements**
The basic requirements used to investigate systems incorporating cable protected with electrical circuit protective materials in this category are contained in UL Subject 1724, "Outline of Investigation for Fire Tests for Electrical Circuit Protective Systems."

The basic standard used to investigate systems constructed with fire-resistive cable in this category is ANSI/UL 2196, "Tests for Fire Resistive Cables."

**UL Mark**
System components identified by an (*) in the description text are Classified under the Classification and Follow-Up Service of UL. Such components and names of manufacturers who are authorized to apply the Classification Mark are identified under the specific product category.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
Underwriters Laboratories Inc. Explanation
Flexible Wraps Firestop Systems (BYBU) ANSI / UL1709

General
This category covers fire-rating Classifications based upon the test method and acceptance criteria in ANSI/UL 1709, “Rapid Rise Fire Tests of Protection Materials for Structural Steel.” These ratings are expressed in hours and are applied to steel columns.

The fire ratings in this category are similar to the ratings for columns covered under Fire Resistance Ratings (BXUV) except for the following two major differences: (1) the rate of temperature rise of the fire exposure, and (2) the inclusion of environmental exposure simulating potential environments in which the fire-resistive assemblies may be located.

The temperature of the fire exposure in which rapid temperature rise ratings are established reaches 2000°F within the first 5 minutes of the fire exposure test. The fire temperature is maintained at 2000°F throughout the rating period. This fire exposure was developed to provide a means to investigate fire-resistive assemblies intended for use in areas such as petrochemical production facilities, which may develop fire temperatures at a more rapid rate than assemblies tested under ANSI/UL 263, “Fire Tests of Building Construction and Materials.”

The systems covered under this category are subjected to standardized environmental tests, which include accelerated aging, high humidity, salt spray exposure, cycling effects of water/freezing temperatures/dryness, and exposure to air containing carbon dioxide and sulfur dioxide. The systems may also be exposed to optional environmental tests, which simulate environments containing various solvents and/or acids. These environmental exposures are intended to measure the ability of the fire-resistive assemblies to retain some degree of fire resistance when subjected to conditions that may occur at production facilities exposed to weathering. A list of the environmental exposures is included in the Classification information for each material described in this category.

The assemblies covered under this category are identified by an alphanumeric system. The identification system is similar to the assemblies in BXUV except an R is included in the number. For example, a column coated with an SFRM (spray-applied fire-resistive material) is identified as Design No. XR7___ (X for column, R for rapid temperature rise fire, 7 for SFRM, and ___ reserved for the sequential numbering of each design).

Unless specifically prohibited in a design, materials identified as Spray-applied Fire-resistive Materials (CHPX) may be applied to primed or similarly painted wide-flange steel shapes, provided: (A) the column flange width does not exceed 16 in., (B) the column web depth does not exceed 16 in., and (C) bond tests conducted in accordance with ANSI/ASTM E736, “Standard Test Method for Cohesion/Adhesion of Spray Applied Fire-Resistive Materials Applied to Structural Members,” indicate a minimum average bond strength of 80% and a minimum individual bond strength of 50% when compared to the bond strength of the fire-resistive coating as applied to clean, uncoated 1/8 in.-thick steel plate. The average and minimum bond strength values are determined based upon a minimum of five bond tests conducted in accordance with ANSI/ASTM E736.

The bond tests need only be conducted when the fire-resistive coating is applied to a primed or similarly painted surface for which acceptable bond strength performance between the primer or other similar material and the fire-resistive coating has not been measured. A bonding agent may be applied to the primed or similarly painted surface to obtain the minimum required bond strength where the bond strengths are found to be below the minimum acceptable values.

As an alternative to the bond test conducted on control samples applied to an uncoated steel plate, the following method may be used for unknown coatings in existing structures. Sections of painted steel are coated with a bonding agent compatible with the sprayed material being used on the project. The treated and untreated substrates are coated with material, cured and subjected to five bond tests each, in accordance with ANSI/ASTM E736. If the failure mode of the sections treated with the bonding agent is 100% cohesive in nature, it is acceptable to use this bond test value as the control bond strength. The value obtained on the untreated painted section is compared to the control value using the minimum 80% average, 50% individual bond strength acceptance criteria established in ANSI/ASTM E736.

If condition (C) is not met, a mechanical bond may be obtained by wrapping the structural member with expanded metal lath (minimum 1.7 lbs per sq yd).
If any of the conditions specified in (A) or (B) are not met, a mechanical break is provided. A mechanical break may be provided by mechanically fastening one or more minimum 1.7 lbs per sq yd metal lath strips to the flange or web either by weld, screw, or powder-actuated fasteners, on maximum 12 in. centers, on each longitudinal edge of the strip, so that the clear spans do not exceed the limits established in conditions (A) or (B) as appropriate. No less than 25% of the width of the oversize flange or web element should be covered by the metal lath. No strip of metal lath should be less than 3-1/2 in. wide.

As an alternative to metal lath, the mechanical break may be provided by the use of minimum No. 12 gauge steel studs with minimum No. 28 gauge galvanized steel disks if such a system is described in a specific design (usually bottomless trench in an electrified floor design) for the fire-resistive coating being applied. The studs are welded to the oversize element in rows such that the maximum clear span conforms to conditions (A) or (B) as appropriate. The spacing of studs along each row should not exceed 24 in. and a minimum one stud 256 sq in. is provided. Where metal lath strips or steel studs and disks are used, acceptable bond strength as described in item (C) is also provided. A bonding agent may be applied to the painted surface to obtain the required minimum bond strength where bond strengths to a painted surface are found to be below minimum acceptable values.

Additional Information
For additional information, see Fire Resistance Ratings (BXRH).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.
General
This category covers the fire-resistive performance of ventilation duct assemblies investigated in accordance with ISO 6944-1985, "Fire Resistance Tests - Ventilation Ducts." The purpose of this test is to measure the ability of a representative ventilation duct assembly to resist the spread of fire from one compartment to another without the aid of fire dampers.

ISO 6944 defines performance requirements for ventilation duct assemblies in terms of insulation, integrity and stability. Stability is the measurement of a ventilation duct assembly's ability to resist collapse which would prevent the ventilation duct assembly from performing its intended function. Integrity is the measurement of the ventilation duct assembly's ability to resist the passage of flames and hot gases into a nonfire environment. Insulation is the measurement of the ventilation duct assembly's ability to limit the temperature rise on the surface of the ventilation duct assembly in a nonfire environment from reaching an average temperature rise of 140°C (252°F) and a maximum temperature rise of 180°C (324°F).

ISO 6944 is applicable to vertical and horizontal ducts, with or without branches, taking into account the joints, air supply and exhaust openings, as well as the basic duct construction.

ISO 6944 contains requirements for two types of ventilation duct assemblies, identified as Duct A and Duct B. The requirements for Duct A are intended for ventilation duct assemblies that pass through the fire environment without openings. The requirements for Duct B are intended for ventilation duct assemblies where the duct contains openings within the fire environment.

ISO 6944 recommends the ventilation duct assembly tested represent the maximum width-to-height ratio intended for use. ISO 6944 also recommends the tested duct be 250 mm by 1000 mm. The Classification for all ventilation duct assemblies is based upon data from fire tests on 250 mm by 1000 mm ducts unless reported otherwise.

Ventilation duct assemblies have been investigated for a flame spread rating of 25 or less and a smoke developed rating of 50 or less in accordance with ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems."

Ventilation duct assemblies are intended to be installed in accordance with the manufacturer's installation instructions provided with the product.

Where a ventilation duct assembly penetrates a fire-rated floor or wall assembly, the resulting opening around the ventilation duct assembly should be firestopped with a firestop system tested in accordance with ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops." Each individual ventilation duct assembly includes reference to one or more through-penetration firestop systems described in Through-penetration Firestop Systems (XHEZ).

The F and T ratings of the firestop system should be equal to or greater than the hourly insulation rating of the ventilation duct assembly, and the F rating of the firestop system should be equal to or greater than the hourly integrity and stability ratings of the ventilation duct assembly.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified assemblies.

Additional Information
For additional information, see Fire-resistive Duct Assemblies (HNKN) and Fire Resistance Ratings (BXRH).

UL Mark
Those materials identified by an (*) in the assembly description text are eligible to be produced under UL's Follow-Up Service Program. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection

1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Min thickness of concrete floor or wall assembly to be 2-1/2 in. (64 mm) for 1 and 2 hr F Rating, 4-1/2 in. (114 mm) for 3 hr F rating and 5-1/2 in. (140 mm) for 4 hr F rating. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 36 sq ft (3.34 m²) with one dimension of opening being 36 in. (914 mm) or less. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Fill, Void Or Cavity Materials** – Graphite Seal, Caulk, Sealant or Putty (Not Show) – One layer of 1/2 in. (13 mm) x 1/16 in. (1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening.

**3M COMPANY** – E-FIS or Ultra GS seals, CP 25WB+ caulk, MPS-2+ putty, FB-3000 WT sealant (Note: L Ratings apply only when Type CP 25WB+ or FB-3000 WT sealant caulk is used.)

3. **Fill, Void Or Cavity Materials** – Intumescent Sheet – Rigid aluminum foil-faced sheets with galv steel sheet backer. Sheet cut to lap a min of 2 in. (51 mm) on the floor or wall surface on all sides of the through opening. Sheets to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface). Sheets secured to both sides of floor or wall assembly using min 3/16 in. (4.8 mm) diam by 1-1/4 in. (32 mm) long steel masonry fasteners with min 1-1/4 in. (32 mm) dia steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) OC. As an option for 1, 2 and 3 h F ratings in floor assemblies only, the sheet may be installed only on the top surface of the floor (see Configuration A above). When the sheet is installed only on the top surface of the floor, T Rating is 0 h.

**3M COMPANY** – Type CS-195+

4. **Support Channel** – (Not shown) – When area of through opening exceeds 1440 sq in. (9,290 cm²) an intermediate support channel shall be installed on each side of floor or wall assembly, flush with floor or wall surface, near the center of the opening. Support channels to be min 1-5/8 by 1-5/8 in. (41 by 41 mm) and formed of min 0.093 in. (2.36 mm) thick (No. 12 gauge) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. Intumescent sheets secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers spaced a max of 4 in. (102 mm) OC.

System No. C-AJ-0007
May 21, 2012

ANSI/UL1479 (ASTM E814)
F Rating – 3 Hr
T Ratings – 0 and 2 Hr (See Item 2)

CAN/ULC S115
F Rating – 3 Hr
FT Ratings – 0 and 2 Hr (See Item 2)
FH Rating – 3 Hr
FTH Ratings – 0 and 2 Hr (See Item 2)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 4 in. (102 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces. As an alternate, nom 4 in. (102 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces. **When steel sleeve is used, T Rating is 0 Hr.**

3. **Packing Material** – Min 1 in. (25 mm) thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. When steel sleeve (Item 2) is used, min packing material thickness is 2 in. (51 mm). Packing material to be recessed min 1 in. (25 mm) from top surface of floor or floor sleeve or from both surfaces of wall or both ends of wall sleeve to accommodate the required thickness of fill material.

   3A. **Forming Material*** – As an alternate to the packing material in Item 3, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be folded in half, lengthwise, and tightly-rolled into a solid 2 in. (51 mm) high cylinder having a diameter greater than the inside diameter of the opening and installed edge-first into the opening. Top of forming material to be recessed min 1 in. (25 mm) from top surface of floor or floor sleeve or from both surfaces of wall or both ends of wall sleeve to accommodate the required thickness of fill material.

   **3M COMPANY – Fire Barrier Packing Material**

4. **Fill, Void or Cavity Materials*** – Putty – Moldable putty material, applied to fill through opening to a min depth of 1 in. (25 mm). In floors, fill material to be installed flush with top surface of floor or floor sleeve. In walls, fill material to be installed flush with wall surface or end of sleeve on both sides of wall assembly.

   **3M COMPANY – MPS-2+ Putty**

System No. C-AJ-0008
May 09, 2013
F Rating – 2 Hr
T Rating – 2 Hr
L Rating At Ambient – Less Than 1 CFM/sq ft
L Rating At 400 F – Less Than 1 CFM/sq ft

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Walls may also be constructed of any UL Classified **Concrete Blocks**. Max area of opening is 36 sq in. (232 cm²) with max dimension shall be 6 in. (152 mm).

   See **Concrete Block (CAZT)** category in the Fire Resistance Directory for names of manufacturers.

2. **Packing Materials** – Min 1-1/2 in. (38 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batts insulation firmly packed into opening as a permanent form. Packing material to be recessed 1-3/4 in. (44 mm) from top surface of floor or from one surface of wall.

3. **Metal Lath** – Metal lath, weighing a min of 2.5 lb/sq yd shall be cut 1 in. (25 mm) larger than each dimension of the hole. The four edges shall be bent upwards at a 90 degree angle. The lath is positioned above the mineral wool insulation, with the bent edges facing upwards. In walls, the lath is installed on both surfaces of the mineral wool.

4. **Fill, Void or Cavity Material** – **Sealant** – Min 1/2 in. (13 mm) thickness of fill material applied to the top surface of steel lath. For walls, fill material shall be installed adjacent to both pieces of the steel lath.

   **3M COMPANY** – Types FB-1000 NS, FB-1003SL (floors only), FB-2000 or FB-2000+ (Floors Only).

*Bearing the UL Classification Mark

© 2013 UL LLC
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall assembly may also be constructed of any UL Classified Concrete Blocks*. Max diam of circular through opening is 6 in. (152 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Sleeve** – (Optional) – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 steel pipe cast into floor or wall assembly. Sleeve to be flush with or project max 2 in. from top surface of floor or from both surfaces of wall.

3. **Packing Material** – Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material.

   3A. **Forming Material*** – As an alternate to the packing material in Item 3, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be tightly-rolled into a solid 4 in. (102 mm) high cylinder having a diameter greater than the inside diameter of the opening and installed edge-first into the opening. As an option, the strips of min 1/2 in. (13 mm) thick compressible mat may be folded in half, lengthwise, and tightly-rolled into a solid 2 in. (51 mm) high cylinder having a diameter greater than the inside diameter of the opening and installed edge-first into the opening. Top of forming material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material.

3M COMPANY – Fire Barrier Packing Material

4. **Fill, Void or Cavity Materials*** – **Caulk** – Applied to fill the through opening flush with the top surface of floor or both surfaces of wall. The hourly T Rating is dependent upon the diam of the through opening, the presence of a steel sleeve and the thickness of caulk fill material, as tabulated below:

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced light-weight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6 in. (152 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Sleeves** (Optional) – The following sleeves may be used:
   A. **Metallic Sleeve** – Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe sleeve cast or grouted into floor or wall assembly, flush with floor or wall surfaces. As an alternate, nom 6 in. (152 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces. **T Rating is 1 Hr when metallic sleeve is used.**
   B. **Nonmetallic Sleeve** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces. **T Rating is 2 Hr when PVC sleeve is used.** **T Rating is 3 Hr when no sleeve is used.**

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3-3/4 in. (95 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form so that the width of the wool is compressed at least 50 percent. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – Sealant – Min 1/4 in. (6 mm) thickness of sealant applied within the annulus, flush with the top surface of floor or with both surfaces of wall. Sealant to lap onto top surface of concrete floor to attain W Rating.

   **3M COMPANY** – FB-1000 NS (floors or walls) or FB-1003 SL

1. **Floor or Wall Assembly** – Min 4-1/2 in. (144 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete floors or min 3 in. (76 mm) thick reinforced lightweight or normal weight concrete walls. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6 in. (152 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) — Nom 6 in. (152 mm) (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush (Configuration A) or may project max 2 in. (51 mm) beyond the floor or wall surfaces (Configuration B).

   The T, FT and FTH Rating of the firestop system is 1 hr except that when the sleeve projects beyond either or both faces of the wall or floor, the T Rating is 0 hr.

---

*A Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.
UL System No. C-AJ-0091 (cont.)

2A. Steel Sleeve – (Optional) - As an alternate to Item 2, nom 6 in. (152 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces (Configuration A).

3. Firestop System – The details of the firestop system shall be as follows:

A. Packing Material – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material.

A1. Forming Material* – As an alternate to the packing material in Item 3A, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be folded in half, lengthwise, and tightly-rolled into a solid 2 in. (51 mm) high cylinder having a diameter greater than the inside diameter of the opening and installed edge-first into the opening. Top of forming material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material.

3M COMPANY – Fire Barrier Packing Material

B. Fill Void or Cavity Materials* - Caulk – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall.

3M COMPANY – FB-3000 WT, IC 15WB+ or CP 25WB+ caulk

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 6 in. (152 mm) for square devices, 2-1/2 in. (64 mm) for 2 in. round devices and 4-1/2 in. (114 mm) for 4 in. (102 mm) round devices. **When thickness of floor or wall assembly is less than 4-1/2 in. (114 mm), T Rating is 1/2 Hr.**

   See **Concrete Blocks** (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Firestop System** – The firestop system shall consist of the following:

   A. **Firestop Device** – Nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), 4 by 4 by 10 in. (102 by 102 by 254 mm), 2 in. (51 mm) diam by 10 in. (254 mm) or 4 in. (102 mm) diam by 10 in. (254 mm) powdered coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device to be centered within opening and installed with its ends projecting an equal distance beyond each surface of the floor or wall assembly in accordance with the accompanying installation instructions. Firestop device secured in place by means of fill material, (Item 2B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of floor or wall after installation of fill material and secured to together with supplied steel set screws. Nom 1 in. (25 mm) thick foam plugs installed flush with each end of device on both sides of floor or wall assembly.

   **3M COMPANY** – 3M Fire Barrier Pass-Through Device

   B. **Fill, Void or Cavity Materials** – **Caulk or Putty** – Min 1 in. (25 mm) thickness of fill material applied within the annulus between the outer perimeter of firestop device and periphery of opening prior to the installation of the mounting flanges, flush with top surface of floor or with both surfaces of wall. As an option, foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device.

   **3M COMPANY** – Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT

*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf) or (1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 1296 sq in. with max dimension of 36 in. (914 mm)

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Firestop System** – The firestop system shall consist of the following:

   A. **Forms** – (Not Shown) – Used as a form to prevent leakage of the fill material during installation on bottom surface of floor or both surfaces of wall. Forms to be a rigid sheet material, positioned as required to accommodate the required thickness of fill material. Forms to be removed after fill material has cured.

   B. **Reinforcement** – A grid of No. 4 (1/2 in., 13mm) diam steel rebar to be inserted into the with a max spacing of 12 in. (306 mm) O.C. prior to the application of the mortar (Item 2C). The steel rebar to be secured together with steel tie wire and installed at mid depth of the mortar with masonry anchors secured to the sides of the opening.

   C. **Fill, Void or Cavity Materials*** – **Mortar** – Min 3 in. (76 mm) thickness of fill material applied within the annulus, flush with bottom surface of floor or with both surfaces of wall. Mortar is mixed in accordance with the fill material manufacturer’s installation instructions.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – 3M Fire Barrier Mortar

1. Floor or Wall Assembly – Min 4-1/2 in. (144 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 6 in. (152 mm).

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. Firestop System – The firestop system shall consist of the following:
   A. Firestop Device* – One firestop device module centered within the opening. The firestop device module consists of a 12 in. (305 mm) long galv steel split sleeve with galv steel flange plates. Firestop device module to be installed in accordance with the accompanying installation instructions. The space between the firestop device module and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1 in. (25 mm). Firestop device module secured in place by means of steel flange plates sized to accommodate the firestop device module. Steel flange plate installed on top side of concrete floor or both sides of a wall or hollow core concrete floor and secured around firestop device module with steel screws. The steel flange plate is then secured to both sides of the floor or wall assembly with masonry screws. The firestop device module is to be installed with its ends projecting an equal distance beyond each surface of the floor or wall assembly.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – DT 100, DT 200 or DT 400 putty sleeve kit

   B. Packing Material – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into sleeve (Item 3A) as a permanent form. Packing material to be recessed from top end of sleeve in floor or both ends of sleeve in walls to accommodate the required thickness of fill material. The use of packing material is optional for DT 100 and DT 200 assemblies in walls.

   C. Fill, Void or Cavity Material – After the installation of the packing material (Item 2B, if required), the supplied putty material is to be packed into end(s) of the firestop device. A min 1 in. (25mm) depth of the putty material is required at each end of device on the wall assemblies and the top side for floor assemblies.

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 384 in.² (2477 cm²) with a max dimension of 32 in. (813 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Firestop System** — The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material** — Blocks installed with 5 in. (127 mm) dimension projecting through opening flush with bottom surface of floor or centered in wall. Blocks to be firmly packed to fill the opening area.

   3M COMPANY - 3M™ Fire Barrier Block B258, 3M™ Fire Barrier Plank PK39

   B. **Fill, Void or Cavity Material** — (Not shown) — Fill material to be forced between blocks and periphery of opening to the max extent possible on top surface of floor or both surfaces of wall.

   3M COMPANY - 3MTM Fire Barrier Rated Foam, FIP 1-Step

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m^3^) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diameter of opening is nom 4-1/2 in. (114 mm). See [Concrete Blocks](CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Sleeve** — (Optional) — Nom 2 or 4-1/2 in. (51 or 114 mm) diameter Schedule 5 (or heavier) steel sleeve or rigid steel conduit or electrical metallic tubing cast or grouted into floor or wall flush with floor or wall surfaces.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Plug sized for the steel sleeve or opening diameter to be friction-fitted within the sleeve or opening such that the outer circumference of the dome-shaped plug is flush with the top surface of the floor or with both surfaces of the wall.

UL System No. C-AJ-0163
January 26, 2017

ANSI/UL1479 (ASTM E814)
F Rating – 2 Hr
T Rating – 2 Hr
L Rating At Ambient – Less Than 1 CFM/ft²
L Rating At 400°F – 1 CFM/ft² and Less Than 1 CFM/ft² (See Item 2)
W Rating – Class 1 (see Item 1)

CAN/ULC S115
F Rating – 2 Hr
FT Rating – 2 Hr
FH Rating – 2 Hr
FTH Rating – 2 Hr
L Rating At Ambient – Less Than 5.08 L/s/m²
L Rating At 400°F – 5.08 L/s/m² and Less Than 5.08 L/s/m² (See Item 2)

1. Floor or Wall Assembly – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) structural concrete floor or wall. Wall may also be constructed of any UL Classified solid Concrete Blocks*. Max area of opening to be 64 in² (413 cm²) with maximum dimension of 8 in. (203 mm). **W Rating applies to floor installations only.** See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. Firestop System – The firestop system shall consist of the following:
   A. Packing Material – Min 4-1/2 in. (114 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation compressed 50 percent into opening as a permanent form. Packing material to be installed flush with top surface of floor or both surfaces of wall assembly.
   B. Fill, Void or Cavity Material* – Min 1/10 in. (2.5 mm) wet (and dry) of fill material sprayed or brushed on top surface of floor to completely cover mineral wool and overlap a min of 1/2 in. (13 mm) onto top surface of concrete floor or both surfaces of wall.
      3M COMPANY – 3M Fire Barrier Watertight Spray
   B1. Fill, Void or Cavity Material* – Tape – As an alternate to Item 2B, Tape cut to size and press applied to top surface of floor or both surfaces of wall to completely cover mineral wool and overlap a min of 1 in. (25 mm) onto the concrete floor or wall around periphery of opening.
      3M COMPANY – 3M Fire and Water Barrier Tape

When Item 2B (Spray) is used, the L Rating at 400°F is less than 1 CFM/ft² (5.08 L/s/m²). When Item 2B1 (Tape) is used, the L Rating at 400°F is 1 CFM/ft² (5.08 L/s/m²).

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

F Rating – 2 Hr
T Rating – 1/4 Hr

1. **Floor Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Max area of opening 3 sq ft. with max dimension of 36 in.

2. **Support Channel** – Support channel shall be installed flush with bottom surface of floor, midway in opening. Support channel not required for openings with a max dimension of 18 in. or less. Support channels to be min 1-5/8 by 1-5/8 in. and formed of min 0.093 in. thick (No. 12 gauge) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening using min 1/4 in. diam by 1-1/2 in. long steel expansion bolts, or equivalent, in conjunction with steel nuts and washers.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheets with galv steel sheet backer. Sheet cut to lap a min of 3 in. on the floor surface on all sides of the through opening. Sheets to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor surface). Sheets secured to bottom side of floor assembly using min 1/4 in. diam by 1-1/2 in. long steel expansion bolts, or equivalent, in conjunction with steel nuts and washers. Max spacing of sheet fasteners not to exceed 4 in. OC. Intumescent sheet secured to steel support channels (Item 2) with steel sheet metal screws in conjunction with min 1-1/4 in. diam steel fender washers spaced max 3 in. OC. When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. OC on each side of butted seam.

   **3M COMPANY** – CS-195+

   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. diam continuous bead applied to edge of intumescent sheet at its interface with surface of floor around entire perimeter of through opening.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

F Rating – 3 Hr
T Ratings – 1-1/4 and 3 Hr (See Item 2A)
L Rating at Ambient – Less Than 1 CFM/sq ft (See Item 3A)
L Rating at 400° F – Less Than 1 CFM/sq ft (See Item 3A)
W Rating – Class 1 (See Item 3A)

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max of 3-1/2 in. (89 mm) above top surface of floor.

   **3M COMPANY** – 3M Fire Barrier Cast-In Device 2MCID, 3MCID, 4MCID

   T Rating is 3 Hr for 2MCID. T Rating is 1-1/4 Hr for 3MCID and 4MCID.

   2A. **Firestop Device – Height Adapter** – (Not Shown) - For use in floors greater than 8 in. (203 mm) thick. Adapter snaps onto top of firestop device (Item 2).

   **3M COMPANY** – 3M Fire Barrier Cast-In Device Height Adapter, 2HA, 3HA, 4HA.

3. **Packing Material** – Min 2 in. (51 mm) thick of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed within the firestop device, flush with the top surface of floor.

3A. **Fill, Void or Cavity Materials – Sealant, Caulk or Putty** – (Optional, Not Shown) - As an option, the packing material (Item 3) may be reduced in thickness by 1/4 in. (6 mm) to 1/2 in. (13 mm) and recessed from top surface of floor to accommodate a 1/4 in. (6 mm) to 1/2 in. (13 mm) thickness of sealant, caulk or putty, installed within the firestop device, flush with the top surface of floor. For W and L Ratings, sealant is required. For W Rating, a min 1/4 in. (6 mm) bead of sealant is also required at the device/concrete interface on the top surface of the floor.

   **3M COMPANY** – FB-1000 NS sealant, FB-1003 SL sealant, CP 25WB+ caulk, FB-3000 WT sealant, FireDam 150+ caulk, IC 15WB+ caulk or MP+ Stix putty

   (Note: W and L Ratings apply only when FB-1000 NS, FB-1003 SL or FB-3000WT sealants are used.)

1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.
   B. **Steel Floor and Form Units** – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. **Firestop Device – Metal Deck Adapter** – Adapter installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.
      3M COMPANY – 3M Fire Barrier Cast-In Device Metal Deck Adapter, 2MDA, 3MDA or 4MDA
   B. **Firestop Device** – Snapped into top of metal deck adapter in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 5-1/2 in. (140 mm) above top surface of floor.
      3M COMPANY – 3M Fire Barrier Cast-In Device, 2MCID, 3MCID, 4MCID, 2PCID, 3PCID or 4PCID

3. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into the top of the firestop device (Item 2B) as a permanent form, flush with the top surface of the floor.

3A. **Fill, Void or Cavity Materials – Sealant** – (Optional, Not Shown) – As an option, the packing material (Item 3) may be reduced in thickness by 1/4 in. (6 mm) to 1/2 in. (13 mm) and recessed from top surface of floor to accommodate a 1/4 in. (6 mm) to 1/2 in. (13 mm) thickness of sealant installed within the firestop device, flush with the top surface of floor. For W and L Ratings, sealant is required. For W Rating, a min 1/4 in. (6 mm) bead of sealant is also required at the device/concrete interface on the top surface of the floor.
   3M COMPANY – FB-1000 NS sealant, FB-1003 SL sealant or FB-3000 WT sealant
   (Note: W and L Ratings apply only when FB-1000 NS, FB-1003 SL or FB-3000 WT sealants are used.)

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening is 6 in. (152 mm).

   See **Concrete Blocks** (CAZT) category in Fire Resistance Directory for names of manufacturers.

   The F, T, FT, FH and FTH Ratings of the firestop system are equal to the 2 hr or 3 hr fire rating of the wall assembly in which it is installed.

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.016 in. (0.41 mm) thick (No. 28 MSG) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the periphery of the opening. The ends of the steel sleeve shall extend 2 in. (51 mm) beyond each surface of the wall.

3. **Fill Void or Cavity Material** – **Pillows** – Nom 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 or 3 in. (51 or 76 mm) thick plastic covered pillows tightly-packed into opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

4. **Fill, Void or Cavity Material** – **Caulk or Sealant** – A min 1/2 in. (13 mm) bead of fill material shall be applied at the steel sleeve/concrete interface on both sides of wall.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – IC 15WB+, CP 25WB+ or FB-3000 WT Sealant

F Ratings – 1 and 2 Hr (See Item 1)  
T Rating – 0 Hr

1. Wall Assembly – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diameter of the opening is 6-1/2 in. (165 mm).

2. Steel Sleeve – Nom 6 in. (152 mm) diam (or smaller) steel electrical metallic tubing (EMT) or Schedule 5 steel pipe. The annular space between steel sleeve and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13mm) Sleeve may extend up to 18 in. (457 mm) beyond each surface of the wall. Sleeve to be rigidly supported on both sides of wall assembly.

3. Packing Materials – Min 1 in. (25 mm) thickness of of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into the opening as a permanent form. Packing material to be recessed from both ends of the sleeve as necessary to accommodate the required thickness of fill material.

4. Firestop System – The firestop system shall consist of the following:
   A. Fill, Void or Cavity Material* – Caulk – Min 1 in. (25 mm) thickness of fill material applied to fill the through opening flush with both ends of the sleeve.
      3M COMPANY
      3M FIRE PROTECTION PRODUCTS – CP 25WB+
   B. Fill, Void or Cavity Material* – Sealant or Putty – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of the wall. At point contact, a min 1/2 in. (13 mm) bead of fill material shall be applied at sleeve/wall interface on both sides of the wall when sleeve extends beyond surface of wall.
      3M COMPANY
      3M FIRE PROTECTION PRODUCTS – IC 15 WB+, CP 25WB+ or FB-3000 WT
   C. Fill, Void or Cavity Material* – (Not Shown) - As an alternate to Item 4B above, min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of the wall. At point contact, a min. 1/2 in. (13 mm) bead of fill material at sleeve/wall interface on both sides of both sides of wall when sleeve extends beyond surface of the wall.

3M™ Fire Barrier Plank  
3M™ Fire Barrier Rated Foam FIP 1-Step | Blank opening in a gypsum wall assembly with a 1080 sq. in. opening with max 36 in. dimension. |
| W-L-0051      | 1, 2       | 3M™ Fire Barrier Plug | Max 2 in. or 4-1/2 in. blank opening in a gypsum wallboard assembly sleeved with No. 28 MSG galvanized sheet steel. |
System No. W-L-0011  
September 20, 2011

ANSI/UL1479 (ASTM E814)  
F Ratings – 1 and 2 Hr (See Item 1)  
T Ratings – 1 and 2 Hr (See Item 1)  
L Rating At Ambient – 2 CFM/sq f  
L Rating At 400 F – 2 CFM/sq f

CAN/ULC S115  
F Ratings – 1 and 2 Hr (See Item 1)  
FT Ratings – 1 and 2 Hr (See Item 1)  
FH Ratings – 1 and 2 Hr (See Item 1)  
FTH Ratings – 1 and 2 Hr (See Item 1)  
L Rating At Ambient – 2 CFM/sq ft  
L Rating At 400 F – 2 CFM/sq ft

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (305 mm) OC. Additional framing members shall be used to completely frame around opening.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 540 in.² (0.35 m²) with a max dimension of 30 in. (762 mm).

   The hourly F, T FT, FH and FTH Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Fill Void or Cavity Material** – *Putty* – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at all corners of opening and extending a min 1 in. (25 mm) in both directions from each corner, flush with both surfaces of wall.  
      
   3M COMPANY – MPS-2+  
   
   B. **Fill Void or Cavity Material** – *Pillows* – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed into opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.
      
   3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – 5/8 in. (16 mm) thick. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400, V400 or W400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6-1/2 in. (165 mm).

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Firestop Device** – One firestop device module centered within the opening. The firestop device module consists of a 12 in. (305 mm) long galv steel split sleeve with galv steel flange plates. Firestop device module to be installed in accordance with the accompanying installation instructions. The space between the firestop device module and the periphery of the opening shall be min 0 in. (point contact) to max 1 in. (25 mm). Firestop device module secured in place by means of steel flange plates sized to accommodate the firestop device module. Steel flange plate installed on both sides of wall and secured around firestop device module with steel screws. The steel flange plate is then secured to the wall with the supplied drywall screws. The firestop device module is to be installed with its ends projecting an equal distance beyond each surface of the wall assembly.

   **3M FIRE PROTECTION PRODUCTS** – 3M Fire Barrier Putty Sleeve Kit DT 100, DT 200 or DT 400

   B. **Fill, Void or Cavity Material** – A min 1 in. (25mm) depth of the putty material is required at each end of the device.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – 3M Fire Barrier MP+ Putty stix

   C. **Packing Material** – (Not shown. Required for installation only on DT 400. Optional on DT 100 and DT 200 assemblies.) - Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into each end of sleeve (Item 3B) as a permanent form. Packing material to be recessed from each end of sleeve to accommodate the required thickness of fill material.

1. **Wall Assembly** – The 1, 2 or 3 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing to consist of steel channel studs. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – 5/8 in. (16 mm) thick. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U400, V400 or W400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6 in. (152 mm).

The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings of the firestop system are 0 hr when used in 1 or 2 hr fire rated walls and 3 hr when used in 3 hr fire rated walls.

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.016 in. (0.41 mm) thick (No. 28 MSG) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers. The ends of the steel sleeve shall extend 2 in. (51 mm) beyond each surface of the wall.

3. **Fill Void or Cavity Material** – **Pillows** – Nom 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 or 3 in. (51 or 76 mm) thick plastic covered pillows tightly-packed into opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

4. **Fill, Void or Cavity Material** – **Caulk or Sealant** – A min 1/2 in. (13 mm) bead of fill material shall be applied at the steel sleeve/gypsum board interface on both sides of wall.

   **3M COMPANY**

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 18 in.² (116 cm²) with a max dimension of 4-1/4 in. (108 mm) for square device. Max diam of opening is 2-1/4 in. (57 mm) for nom 2 in. (51 mm) round device and 4-1/4 in. (108 mm) for nom 4 in. (102 mm) round device.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Firestop System** – The firestop system shall consist of the following:

   A. **Firestop Device*** – Each device consists of a nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), a nom 4 by 4 by 10 in. (102 by 102 by 254 mm), a nom 2 in. (51 mm) diam by 10 in. (254 mm) or a nom 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device to be installed within opening with ends projecting an equal distance beyond each surface of wall assembly in accordance with the accompanying installation instructions. The annular space between device and periphery of opening shall be min 0 in. (point contact) to max 1/8 in. (3.2 mm). Firestop device secured in place by means of fill material (Item 2B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of wall after installation of fill material, and secured together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs installed flush with each end of device on both sides of wall assembly. The foam plug in one or both ends of the device is optional except when L Rating is required (See Item 2B).

   B. **Fill, Void or Cavity Materials*** – **Putty or Caulk** – Min 1/8 in. (3 mm) diam bead of fill material applied at interface of gypsum board and firestop devices immediately prior to the installation of the mounting flanges. As an option, foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device. L Rating applies only when fill material is applied at interface of gypsum board and device prior to mounting flanges and with ends of firestop device filled with nominal 1/8 in. (3.2 mm) of Moldable Putty+.

1. Wall Assembly – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC.
   B. Gypsum Board* – 5/8 in. (16 mm) thick, The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6-1/2 in. (165 mm).

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. Steel Sleeve – Nom 6 in. (152 mm) diam (or smaller) steel electrical metallic tubing (EMT) or Schedule 5 steel pipe. The annular space between steel sleeve and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13 mm) Sleeve may extend up to 18 in. (457 mm) beyond each surface of the wall.

Sleeve to be rigidly supported on both sides of wall assembly.

3. Packing Materials – Min 1 in. (25 mm) thickness of of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into the opening as a permanent form. Packing material to be recessed from both ends of the sleeve as necessary to accommodate the required thickness of fill material.

4. Firestop System – The firestop system shall consist of the following:
   A. Fill, Void or Cavity Material* – Caulk – Min 1 in. (25 mm) thickness of fill material applied to fill the through opening flush with both ends of the sleeve.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – CP 25WB+

B. Fill, Void or Cavity Material* – Sealant or Putty – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of the wall. At point contact, a min 1/2 in. (13 mm) bead of fill material shall be applied at sleeve/wall interface on both sides of the wall when sleeve extends beyond surface of wall.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – IC 15 WB+, CP 25WB+ or FB-3000 WT

C. Fill, Void or Cavity Material* – (Not Shown) - As an alternate to Item 4B above, min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of the wall. At point contact, a min. 1/2 in. (13 mm) bead of fill material at sleeve/wall interface on both sides of both sides of wall when sleeve extends beyond surface of the wall.

1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing to consist of wood studs or channel shaped steel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional studs shall be used to completely frame the opening.

   B. **Gypsum Board** — One or two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max area of opening is 144 sq in. (929 cm²) with a max dimension of 12 in. (305 mm). The hourly F, T, FH, FT and FTH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Blocks centered within wall opening with 5 in. (127 mm) dimension projecting through opening such that blocks are recessed max ½ in. (13 mm) from both surfaces of wall. Blocks to be tightly packed to fill the opening area.

   B. **Fill, Void or Cavity Materials** — Foam (Optional. Required for L Rating Only. Not Shown) — Fill material to be forced between blocks and periphery of opening to the max extent possible. Foam to be injected into all voids within the annular space between blocks to the full depth of the blocks (Item 2A).

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

**1. Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

A. **Studs** — Wall framing to consist of wood studs or channel shaped steel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional studs shall be used to completely frame the opening.

B. **Gypsum Board** — One or two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max area of opening is 1080 sq in. (6968 cm²) with a max dimension of 36 in. (914 mm).

The hourly **F** and **FH** Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly **T**, **FT** and **FTH** Ratings of the firestop system are equal to 1/2 Hr when installed in 1 hr rated walls, and 1-3/4 Hr when installed in 2 hr rated walls.

---

**2. Firestop System** — The firestop system shall consist of the following:

A. **Fill, Void or Cavity Material** — Blocks centered within wall opening with 5 in. (127 mm) dimension projecting through opening such that blocks are recessed max 1/2 in. (13 mm) from both surfaces of wall. Blocks to be tightly packed to fill the opening area.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — 3M™ Fire Barrier Block B258, 3M™ Fire Barrier Plank PK39

B. **Fill, Void or Cavity Material** — Foam — (Not Shown) — Fill material to be forced between blocks and periphery of opening to the max extent possible. Foam to be injected into all voids within the annular space between blocks to the full depth of the blocks (Item 2A).

3M COMPANY 3M FIRE PROTECTION PRODUCTS — Fire Barrier Rated Foam, FIP 1-Step

B1. **Fill, Void or Cavity Material** — Sealant or Caulk — (Not Shown) — As an alternate to Item 2B, sealant to be forced between blocks and periphery of opening to the max extent possible. Sealant to be applied into all voids within the annular space between blocks to the full depth of the blocks (Item 2A).

3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+ Caulk, CP 25WB+ Caulk or FB-3000 WT Sealant

The **L** Ratings of the firestop system apply only when Item 2B Foam is used.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified if the individual U300, U400 or V400 Series Wall and Partition Designs in the Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing shall consist of either wood studs or channel shaped steel studs. Wood studs to consist of 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide, fabricated from min 25 MSG galvanized steel, spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** — Nom 5/8 in. (16 mm) thick with square or tapered edges. The gypsum board type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design Number. Max diam of opening is 2 in. (51 mm) or 4-1/2 in. (114 mm).

   The hourly F, T, FT, FH and FTH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Steel Sleeve** — Cylindrical sleeve fabricated from min 0.016 in. (0.41 mm) thick (No. 28 MSG) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers. The ends of the steel sleeve shall be flush with each surface of the wall.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material*** — Plug sized for the steel sleeved opening per Table below friction-fitted within the sleeve at each side of wall such that the outer circumference of the dome-shaped plug is flush with both surfaces of the wall.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of circular through opening is 32-1/2 in. (826 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** (Optional, not shown) – Nom 12 in. (305 mm) diam (or smaller) Schedule 40 (or heavier) steel pipe sleeve cast into concrete floor or wall. Sleeve to be flush with or project max 2 in. (51 mm) from top surface of floor or from both surfaces of wall. As an alternate, nom 12 in. (305 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through Penetration** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (0 mm, point contact) to max 1-3/8 in. (35 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe** – Nom 30 in. (762 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   A1. **Iron Pipe** – Nom 30 in. (762 mm) diam (or smaller) cast or ductile iron pipe.

   B. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit.

   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.

3. **Packing Material** – Polyethylene backer rod or nom 1 in. (25 mm) thickness of tightly-packed ceramic (alumina silica) fiber blanket, mineral wool batt or glass fiber insulation material used as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of solid concrete or concrete block wall as required to accommodate the required thickness of caulk fill material (Item 4). As an alternate when max pipe size is 10 in. (254 mm) diam and when max annular space is 1 in. (25 mm), a min 1 in. (25 mm) thickness of tightly-packed ceramic fiber blanket or mineral wool batt packing material may be recessed min 1/2 in. (13 mm) from bottom surface of floor or from either side of solid concrete wall.

4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Applied to fill the annular space to the min thickness shown in the following table:

<table>
<thead>
<tr>
<th>Max Pipe Diam In. (mm)</th>
<th>Max Annular Space In. (mm)</th>
<th>Packing Mtl Type (a)</th>
<th>Min Caulk Thkns In. (mm)</th>

<td>1 (25) (b)</td>
</tr>
</tbody>
</table>

(a) BR = Polyethylene backer rod.

CF = Ceramic fiber blanket.

GF = Glass fiber insulation.

MW = Mineral-wool batt.

(b) Caulk installed flush with top surface of floor or both surfaces of wall.

(c) Caulk installed flush with bottom surface of floor or one surface of solid (non-concrete block) wall.

3M COMPANY – CP 25WB+ or FB-3000 WT

(Note: W Rating applies only when FB-3000 WT is used on top surface of floor and when it laps onto concrete for sleeved opening.)

*Bearing the UL Classification Marking

Copyright © 2010 Underwriters Laboratories Inc.®
1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Min thickness of concrete floor or wall is 2-1/2 in. (64 mm) for 1 hr F Rating and 4-1/2 in. (114 mm) for 2 or 3 hr F Rating. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 36 sq ft (3.4 m²) with one dimension of opening being 36 in. (914 mm) or less. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Pipe or Conduit** – Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe, nom 6 in. (152 mm) diam (or smaller) steel conduit, nom 4 in. (102 mm) diam (or smaller) steel EMT or nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing. Min clearance between pipes 1 in. (25 mm) Min clearance between pipe and wall of through opening 1-1/4 in. (32 mm). When single nom 4 in. (102 mm) diam (or smaller) pipe, conduit or EMT is installed in nom 7 in. (178 mm) diam (or smaller) circular through opening, min clearance between pipe, conduit or EMT and wall of through opening is 0 in. (0 mm) (point contact). Pipes and conduits rigidly supported on both sides of floor or wall assembly.

3. **Fill, Void or Cavity Materials – Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in strips. Min 2 in. (51 mm) wide strip wrapped around pipe/conduit (foil side exposed) and secured in place with steel wire or aluminum foil tape. Wrap strip to extend approx 7/8 in. (22 mm) beyond each face of the intumescent sheet (Item 4). When nom 6 in. (152 mm) diam (or smaller) pipe, conduit or EMT is installed in through opening, no wrap strip is required on pipe, conduit or EMT for 2 hr F Rating.

4. **Fill, Void or Cavity Materials – Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheet cut to tightly follow the contours of the pipe wrap strip (or individual pipe) and with a min lap of 2 in. (51 mm) on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface). Sheet secured to top surface of floor and both sides of solid concrete or concrete block wall using min 3/16 in. (5 mm) diam by 1-1/4 in. (32 mm) long steel masonry fasteners with min 1-1/4 in. (32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) OC. As an alternate when (1) the max pipe or conduit size is nom 4 in. (102 mm) diam, (2) each pipe or conduit is provided with a layer of wrap strip and (3) no bundled cables or insulated pipes are installed in the through opening, the intumescent sheet may be installed on bottom surface of floor or on only one side of solid concrete wall.

5. **Fill, Void or Cavity Materials – Graphite Seal, Caulk, Sealant or Putty** – Generous application of caulk or putty to be applied around the base of the wrap strip (or individual pipe) at its egress from the intumescent sheet(s) in addition to completely covering the wrap strip up to the interface(s) with the pipe, pipe insulation and/or cable bundle. One layer of 1/2 in. (13 mm) x 1/16 in. (1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Prior to installation of the steel strip, slit in intumescent sheet covered with nom 1/4 in. (6 mm) diam bead of caulk (Item 5). Steel cover strip secured to galv steel backer of intumescent sheet with steel sheet-metal screws or steel rivets spaced max 2 in. (51 mm) OC on each side of slit.

6. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.015 in. (0.39 mm) thick (30 gauge) galv steel centered over entire length of slit made in intumescent sheet (Item 4) to permit installation about the pipe/cable bundle. Prior to installation of the steel strip, slit in intumescent sheet covered with nom 1/4 in. (6 mm) diam bead of caulk (Item 5). Steel cover strip secured to galv steel backer of intumescent sheet with steel sheet-metal screws or steel rivets spaced max 2 in. (51 mm) OC on each side of slit.
System No. C-AJ-1006 continued

7. **Support Channel** (Not Shown) – When area of through opening exceeds 1440 sq in. (9290 cm²), an intermediate support channel shall be installed flush with top surface of floor or both surfaces of wall. Support channels to be min 1-5/8 in. by 1-5/8 in. (41 mm by 41 mm) and formed of min 0.093 in. (2.36 mm) thick (No. 12 gauge) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. When steel support channels are centered beneath butted seams of intumescent sheets, no steel cover strip (Item 6) is required over butted seam. Intumescent sheet secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. (76 mm) OC on each side of butted seam. When support channel is located away from intumescent sheet seam, fasteners spaced max 6 in. (152 mm) OC. Prior to installation of the intumescent sheet(s), a nom 1/4 in. (6 mm) diam continuous bead of caul (Item 5) shall be applied as gasket over the steel support channel.

1. **Floor or Wall Assembly** – Min 5 in. (127 mm) thick reinforced normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6 in. (152 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Sleeve** – (Optional) – Nom 6 in. (152 mm) diam (or smaller) electrical metallic tubing, steel conduit or cast iron pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces.

3. **Through Penetrants** – One metallic pipe or conduit to be centered within the firestop system. A nom annular space of 3/4 in. (19 mm) is required within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes or conduits may be used:

   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or steel conduit.

4. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor as required to accommodate the required thickness of fill material. Packing material to be centered in walls mid depth and recessed to allow for installation of fill material.

5. **Fill, Void or Cavity Material** – **Sealant** – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with top surface of floor. In walls, fill material to be applied on each side of packing material.

   **3M COMPANY** – Types FB-1000 NS, FB-1003SL (floors only), FB-2000 or FB-2000+ (floors only).

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of through opening is 12-1/4 in.

See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Min annular space between pipe, conduit or tubing and edge of opening is 0 in. (point contact). Max annular space is dependent on pipe, conduit or tubing type and size as well as the F Rating of the system, as shown in the table below. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe** – Nom 10 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Conduit** – Nom 6 in. diam (or smaller) rigid steel conduit.
   C. **Conduit** – Nom 4 in. diam (or smaller) steel electrical metallic tubing or steel conduit.
   D. **Copper Tubing** – Nom 3 in. diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 3 in. diam (or smaller) Regular (or heavier) copper pipe.
   F. **Iron Pipe** – Nom 10 in. diam (or smaller) cast or ductile iron pipe.

3. **Fill, Void or Cavity Materials** – Putty – Moldable putty material kneaded by hand and applied to fill annular space to a min depth of 1 in., flush with top surface of floor. In wall assemblies, required putty thickness to be installed symmetrically on both sides of wall.

1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150pcf or 1600-2400kg/m³) concrete. Except as noted in table under Item 4, min thickness of solid concrete floor or wall assembly is 4-1/2 in. (114 mm). Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow core **Precast Concrete Units***. When floor is constructed of hollow core precast concrete units, packing material (Item 3) and caulk fill material (Item 4) to be installed symmetrically on both sides of floor, flush with floor surface. Wall assembly may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening in solid lightweight or normal weight concrete floor is 32 in. (813 mm). Max diam of opening in floor constructed of hollow-core precast concrete units is 7 in. (178 mm)

See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional, Not Shown) - Nom 16 in. (406 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Sleeve may extend a max of 2 in. (51 mm) above top of floor or beyond either surface of wall. As an alternate, nom 16 in. (406 mm) diam (or smaller) min 0.028 (0.71 mm) thick galvanized sheet steel sleeve cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Max annular space between pipe, conduit or tubing and edge of through opening or sleeve is dependent on the parameters shown in Item 4. Min annular space between pipe or conduit and edge of through opening is 0 in. (point contact). Max annular space to be as shown in the table in Item 4. Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

A. **Steel Pipe** – Nom 30 in. (762 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
B. **Iron Pipe** – Nom 30 in. (762 mm) diam (or smaller) cast or ductile iron pipe.
C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit.
D. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
E. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tube.
F. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Packing Material** – Polyethylene backer rod or nom 1 in. (25 mm) thickness of tightly-packed mineral wool batt or glass fiber insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of caulk fill material (Item 4).

3A. **Forming Material** – As an alternate to the packing material in Item 3, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. As an option, the strips of min 1/2 in. (13 mm) thick compressible mat may be folded in half, lengthwise, and stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 2 in. (51 mm) depth. Top of forming material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material.

**3M COMPANY** – Fire Barrier Packing Material
4. **Fill, Void or Cavity Material** – **Caulk, Sealant** – Applied to fill the annular space flush with top surface of floor. In wall assemblies, required caulk thickness to be installed symmetrically on both sides of wall, flush with wall surface. At point contact location between penetrant and sleeve or between penetrant and concrete, a min 1/4 in. (6 mm) diam bead of caulk shall be applied at top surface of floor and at both surfaces of wall. The hourly F Ratings and the min required caulk thicknesses are dependent upon a number of parameters, as shown in the following table:

<table>

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of circular through opening in floor or wall assembly to be 3/4 in. to 1-1/2 in. larger than diam of flexible metal conduit (Item 2) installed in through opening. Max diam of opening is 6 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Product*** – Nom 4 in. diam (or smaller) aluminum or steel Flexible Metal Conduit+. Max one flexible metal conduit to be installed near center of circular through opening in floor or wall assembly. Flexible metal conduit to be rigidly supported on both sides of floor or wall assembly.

   AFC CABLE SYSTEMS INC

3. **Packing Material** – Nom 1 in. thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. from top surface of floor or from both surfaces of wall.

4. **Fill, Void or Cavity Material*** – **Caulk** – Applied to fill the annular space around the flexible metal conduit. In floors, a min 1 in. depth of fill material to be installed flush with top surface of floor. In walls, a min 1 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 27-1/4 in. (692 mm).

See **Concrete Block** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional, Not Shown) – Nom 28 in. (711 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. As an alternate, nom 28 in. (711 mm) diam (or smaller) sleeve fabricated from nom 0.028 in. (0.71 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through-Penetrant** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. An annular space of min 0 in. (point contact) to max 3-1/4 in. (83 mm) is required within the firestop system. When optional steel sleeve is used, min annular space shall be 1/2 in. (13 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

A. **Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe. When Type FB-1000 NS or FB-1003 SL sealant (see Item 4) is used, pipe diam shall not exceed nom 8 in. (203 mm).

B. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or nom 6 in. (152 mm) diam (or smaller) steel conduit.

C. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing. When Type FB-1000 NS or FB-1003 SL sealant (see Item 4) is used, tubing diam shall not exceed nom 4 in. (102 mm).

D. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe. When Type FB-1000 NS or FB-1003 SL sealant (see Item 4) is used, pipe diam shall not exceed nom 4 in. (102 mm).

E. **Iron Pipe** – Nom 24 in. (610 mm) diam (or smaller) cast or ductile iron pipe. When Type FB-1000 NS or FB-1003 SL sealant (see Item 4) is used, pipe diam shall not exceed nom 8 in. (203 mm).

3. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.

3A. **Forming Material** – As an alternate to the packing material in Item 3, nom 4 in. (102 mm) wide strips of min 1/2 in. (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. Top of forming material to be recessed from top surface of floor or steel sleeve or from both surfaces of wall or steel sleeve in wall as necessary to accommodate the required thickness of caulk fill material.

**3M COMPANY 3M FIRE PROTECTION PRODUCTS** – Fire Barrier Packing Material

4. **Fill, Void or Cavity Material** – Sealant – Min 1/2 in. (13 mm) thickness of fill material applied within annulus, flush with top surface of floor or both surfaces of wall assembly. At the point contact location between pipe and concrete, a min 1/2 in. (13 mm) diam bead of sealant shall be applied at the concrete/pipe interface on the top surface of floor and on both surfaces of wall assembly.

**3M COMPANY 3M FIRE PROTECTION PRODUCTS** – Types FB-2000, FB-2000+, FB-1000 NS, FB-1003 SL or FB-3000 WT.
(Note: W Rating applies only when FB-1000 NS, FB-1003 SL or FB-3000 WT Sealant is used.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of rectangular opening in floor or wall 30 sq in. with max dimension of 10 in. Max diam of circular opening is 6 in.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Copper Tubing** – One nom 2 in. diam (or smaller) Type L (or heavier) copper tubing installed within firestop system. When installed in rectangular openings, tubing is to be centered. When installed in circular openings, a min annular space of 7/16 in. is required. Pipe to be rigidly supported on both sides of floor or wall assembly.

3. **Packing Material** – Min 3 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.

4. **Fill, Void or Cavity Material*** – **Sealant** – Min 1/2 in. thickness of fill material applied within annulus, flush with top surface of floor or both surfaces of wall.

* **3M COMPANY** – FB-2000 or FB-2000+

W Rating – Class I (See Item 4)

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of square, rectangular or circular opening is 45 sq in. with max dimension of 9 in.

   *See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Pipe** – Nom 3 in. diam (or smaller) Type L (or heavier) copper pipe or nom 2-1/2 in. diam (or smaller) Schedule 10 (or heavier) steel pipe. One or more pipes may be installed with a min 1/2 in. to max 1 in. clearance maintained between pipes and with a min 1/4 in. to max 1 in. clearance maintained between pipe and sides of through opening. Pipes to be rigidly supported on both sides of floor or wall assembly.

3. **Packing Material** – Min 1 in. thick mineral wool batt insulation firmly packed into opening with its top surface recessed min 1 in. from top surface of the floor. In wall assemblies, forming material to be firmly packed into opening on both sides of wall and recessed min 1 in. from wall surface.

4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Applied to fill through opening to a min depth of 1 in. In floor assemblies, fill material to be installed flush with top surface of floor. In wall assemblies, fill material to be installed flush with wall surface on both sides of wall.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT is used.)

T Ratings – 0, 1-1/2 and 2 Hr (See Item 2)

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 3 in.

See Concrete Blocks (CASZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Product** – Flexible Metal Conduit – Nom 2 in. diam (or smaller) aluminum Flexible Metal Conduit+. Max one flexible metal conduit installed near center of through opening in floor or wall assembly. Diam of opening to be min 1/2 in. to max 1-1/2 in. larger than diam of flexible metal conduit. When nom 1-1/4 in. to 2 in. diam conduit is used, T Rating is 0 hr. When nom 1/2 in. to 1 in. diam conduit is used, T Rating is 1-1/2 hr. When nom 3/8 in. diam conduit is used, T Rating is 2 hr. Flexible metal conduit to be rigidly supported on both sides of floor or wall assembly.

ANAMET INDUSTRIAL INC

3. **Firestop System** – The firestop system shall consist of the following:

A. **Packing Material** – Nom 1 in. thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. from top surface of floor or from both surfaces of wall.

B. **Fill, Void or Cavity Material** – Caulk – Applied to fill the annular space around the through-penetrating product. In floors, a min 1 in. depth of fill material to be installed flush with top surface of floor. In walls, a min 1 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly.

3M COMPANY – CP 25WB+

*Bearing the UL Classification Marking

1. **Floor or Wall Assembly** – Min 2-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. When area of through opening exceeds 144 sq in., min concrete thickness is 4-1/2 in. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of through opening not to exceed 560 sq in. with max width dimension of 14 in. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Pipe or Conduit** – Nom 6 in. diam (or smaller) Schedule 10 (or heavier) steel pipe or steel conduit or nom 4 in. diam (or smaller) steel EMT or Type L (or heavier) copper tubing. Multiple pipes and/or conduits permitted in opening provided a min separation of 1/2 in. is maintained between pipes or conduits. Min annular space between pipes or conduits and edge of through opening is zero in. (point contact). Max annular space is 6 in. Pipes and conduits rigidly supported on both sides of floor or wall assembly.

3. **Support Hanger** – Min 1 in. wide strips of min 0.034 in. (20 gauge) galv steel sheet bent to form a “hat” shape with each “brim” of the hat shape bearing 2 in. on the top surface of the floor and with the “crown” depth sufficient to accommodate the packing material (Item 4) and the required fill material (Item 5) thickness. Support hangers installed across width of opening and spaced max 8 in. O.C. When max dimension of opening is 12 in. and when max annular space is 2-3/4 in., no support hangers are required. Ends of support hangers anchored to top surface of floor with steel anchor bolts, or equivalent, in conjunction with steel fender washers. Support hangers not required in wall assemblies.

4. **Packing Material** – Min 1 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form. In floors, packing material to be installed atop support hangers (when required) with top surface recessed min 1 in. from top surface of floor. In walls, packing material to be recessed min 1 in. from both surfaces of wall.

5. **Fill, Void or Cavity Material** – Caulk or Sealant – Applied to fill the annular space to a min depth of 1 in. on top surface of floor or on both sides of wall.

*3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant.

August 23, 2004
F Ratings – 2 and 3 Hr (See Item 1)
T Rating – 0 Hr
L Rating At Ambient – 2 CFM/sq ft
L Rating At 400 F – Less than 1 CFM/sq ft
W Rating – Class I (See Item 3)

1. Floor or Wall Assembly – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of circular through opening is 12 in.

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

The hourly F Rating is 2 Hr for Firestop Configuration A and 3 Hr for Firestop Configuration B.

FIRESTOP CONFIGURATION A

2. Aluminum Pipe – Nom 10 in. diam (or smaller) Schedule 10 (or heavier) pipe for use in closed (process or supply) piping system. Max annular space between pipe and edge of through opening not to exceed 1-3/4 in. Min annular space between pipe and edge of opening is 1/4 in. Pipe to be rigidly supported on both sides of floor or wall assembly.

3. Firestop System – The firestop system shall consist of the following:
   A. Fill, Void or Cavity Materials – Wrap Strip – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. wide strips. Nom 2 in. wide strip tightly-wrapped around pipe (foil side exposed), secured with a steel wire tie and slid into annular space on both sides of floor or wall assembly. In floors, the bottom edge of the lower wrap strip is to be flush with the bottom surface of floor and the upper wrap strip is to protrude 1/4 in. above the top surface of the floor. In walls, each wrap strip is to protrude 1/4 in. from the wall surface.
      3M COMPANY – FS-195+
   B. Packing Material – Min 3-1/2 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of caulk fill material (Item 3C).
   C. Fill, Void or Cavity Materials – Caulk or Sealant – Min 1 in. thickness of fill material applied within annulus, flush with top surface of floor or both surfaces of wall assembly. Min 1/4 in. thickness of caulk also applied to cover exposed edge of wrap strip layer on top surface of floor and on both sides of wall.
      3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT is used.)

FIRESTOP CONFIGURATION B

2. Aluminum Pipe – Nom 5 in. diam (or smaller) Schedule 10 (or heavier) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. An annular space of min 0 in. (point contact) to max 1-1/2 in. is required within the firestop system. Pipe to be rigidly supported on both sides of floor or wall assembly.

3. Firestop System – The firestop system shall consist of the following:
   A. Packing Material – Polyethylene backer rod or nom 1 in. thickness of tightly-packed mineral wool batt or glass fiber insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of caulk fill material (Item 3B).
   B. Fill, Void or Cavity Materials – Caulk or Sealant – Min 1/2 in. thickness of fill material applied within annulus, flush with top surface of floor or both surfaces of wall assembly. At the point contact location between pipe and concrete, a min 1/2 in. diam bead of sealant shall be applied at the concrete/pipe interface on the top surface of floor and on both surfaces of wall assembly.
      3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT is used.)

*Bearing the UL Classification Marking

System No. C-AJ-1175
March 05, 2007
F Rating – 2 Hr
T Rating – 0 Hr
W Rating – Class 1 (See Item 4)

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. When Configuration A is used or when Configuration B is used in conjunction with the steel sleeve (Item 1A), floor may be constructed of any min 6 in. (152 mm) thick UL Classified hollow core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of circular through opening is 10 in. (254 mm).

See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional) – Nom 10 in. diam (or smaller) Schedule 10 (or heavier) steel pipe sleeve cast into concrete floor or wall. Sleeve to be flush with or project max 2 in. from top surface of floor or from both surfaces of wall. As an alternate, nom 10 in. (254 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Max annular space between pipe, conduit or tubing and edge of through opening not to exceed 1-3/8 in. (35 mm). Min annular space between pipe or conduit and edge of through opening is 0 in. (point contact). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit.
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   E. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tube.
   F. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

   **Firestop Configuration A**

   3. **Packing Material** – Min 1 in. (25 mm) thickness of tightly-packed mineral wool batt material used as a permanent form. Packing material to be recessed from top or bottom surface of floor or from either surface of solid concrete wall as required to accommodate the required thickness of caulk fill material (Item 4). When wall is constructed of concrete block, packing material is to be installed on both sides of wall assembly. When precast hollow core floor is used, packing material must be installed on bottom surface of floor.

   4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Applied to fill the annular space to a min depth of 1/2 in. (13 mm) flush with the top or bottom surface of the floor or either surface of the solid concrete wall. A min 1/4 in. (6 mm) diam bead of caulk shall be applied to the floor or wall surface where the pipe, conduit or EMT is installed in point contact with the edge of the through opening. When wall is constructed of concrete block, caulks to be installed symmetrically on both sides of wall assembly. When precast hollow core floor is used, caulks fill material must be installed on bottom surface of floor.

   3M COMPANY – CP 25WB+ or FB-3000 WT.
   (Note: W Rating applies only when FB-3000 WT is used flush with the top surface of floor.)

   **Firestop Configuration B**

   3. **Packing Material** – Polyethylene backer rod or nom 1 in. (25 mm) thickness of tightly-packed mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1/2 in. (13 mm) from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of caulks fill material (Item 4).

   4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Applied to fill the annular space to a min depth of 1/2 in. (13 mm) flush with the top surface of the floor or both surfaces of the wall. A min 1/4 in. (6 mm) diam bead of caulks shall be applied to the floor or wall surface where the pipe, conduit or EMT is installed in point contact with the edge of the through opening.

   3M COMPANY – CP 25WB+ or FB-3000 WT.
   (Note: W Rating applies only when FB-3000 WT is used.)

*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of circular through opening in floor or wall assembly to be 3/4 in. to 1-1/2 in. larger than diam of flexible metal conduit (Item 2) installed in through opening. Max diam of opening is 6 in.

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** (Optional) – Nom 6 in. diam (or smaller) Schedule 10 (or heavier) steel pipe sleeve cast into concrete floor or wall. Sleeve to be flush with or project max 2 in. from top surface of floor or from both surfaces of wall.

2. **Through Penetrating Product*** – Nom 4 in. diam (or smaller) aluminum or steel Flexible Metal Conduit#. Max one conduit per through opening. Max annular space between conduit and edge of through opening not to exceed 1-1/2 in. Min annular space between conduit and edge of through opening is zero in. (point contact). When aluminum conduit is used, F Rating is 2 Hr. When steel conduit is used, F Rating is 3 hr. Flexible metal conduit to be rigidly supported on both sides of floor or wall assembly.

**AFC CABLE SYSTEMS INC**

3. **Packing Material** – Polyethylene backer rod or min 1 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1/2 in. from top surface of floor or from both surfaces of wall.

4. **Fill, Void or Cavity Material** – Caulk – Applied to fill the annular space around the flexible metal conduit. In floors, a min 1/2 in. depth of fill material to be installed flush with top surface of floor. In walls, a min 1/2 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly. When steel sleeve is not used or is used and installed flush with floor or wall surfaces, a min 1/4 in. diam bead of caulk shall be applied to the floor on wall surface where the through penetrant is installed in point contact with the edge of the through opening.

**3M COMPANY** – CP 25WB+

1. Floor or Wall Assembly – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 16 in. (406 mm).

   See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

A. Steel Sleeve – (Optional, Not Shown) - Nom 16 in. (406 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. As an alternate, nom 16 in. (406 mm) diam (or smaller) sleeve fabricated from nom 0.028 in. (0.71 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. Through Penetrant – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. An annular space of min 0 in. (point contact) to max 2-7/8 in. (73 mm) is required within the firestop system. When optional steel sleeve is used, min annular space shall be 1/2 in. (13 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. Steel Pipe – Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. Conduit – Nom 6 in. (152 mm) diam (or smaller) steel conduit.
   C. Conduit – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. Copper Tubing – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. Copper Pipe – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. Packing Material – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation tightly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.

4. Fill, Void or Cavity Material* – Sealant – Min 1/4 in. (6 mm) thickness of fill material applied within annulus, flush with top surface of floor or both surfaces of wall assembly. At the point contact location between pipe and concrete, a min 1/2 in. (13 mm) diam bead of sealant shall be applied at the concrete/pipe interface on the top surface of floor and on both surfaces of wall assembly.

   3M COMPANY – FB-2000+, FB-1000 NS, FB-1003 SL or FB-3000 WT.
   (Note: W Rating applies only when FB-1000 NS, FB-1003 SL or FB-3000 WT is used.)

F Rating – 2 Hr
F Rating – 0 Hr

1. Floor or Wall Assembly – Min 4-1/2 in. thick lightweight or normal weight (100 to 150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of circular through opening in floor or wall assembly to be min 3/4 in. to max 1-1/2 in. larger than diam of flexible metal piping (Item 2) installed in through opening. Max diam of opening is 2-3/4 in. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. Through Penetrating Product* – Flexible Metal Piping – Nom 1 in. diam (or smaller) steel Flexible Metal Piping. Max one flexible metal piping to be installed near center of circular through opening in floor or wall assembly. Flexible metal piping to be rigidly supported on both sides of floor or wall assembly. Plastic covering on piping shall be removed for a distance of 2 ft on both sides of floor or wall assembly.

TITEFLEX CORP, A BUNDY CO

3. Packing Material – Nom 1 in. thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. from top surface of floor or from both surfaces of wall.

4. Fill, Void or Cavity Material* – Caulk – Applied to fill the annular space around the flexible metal piping. In floors, a min 1 in. depth of fill material to be installed flush with top surface of floor. In walls, a min 1 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly.

3M COMPANY – CP 25WB+

1. **Floor or Wall Assembly** – Min 4-1/2 in.(114 mm) thick lightweight or normal weight (100 to 150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of circular through opening in floor or wall assembly to be min 3/4 in. (19 mm) to max 1-1/2 in. (38 mm) larger than diam of flexible metal piping (Item 2) installed in through opening. Max diam of opening is 4-1/8 in. (105 mm).

   See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Product** – **Flexible Metal Piping** – Nom 2 in. (51 mm) diam (or smaller) steel flexible metal piping. Max one flexible metal piping to be installed near center of circular through opening in floor or wall assembly. Flexible metal piping to be rigidly supported on both sides of floor or wall assembly.

   **WARD MFG L L C** – Wardflex or Wardflex II

3. **Packing Material** – Nom 1 in. (25 mm) thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. (25 mm) from top surface of floor or from both surfaces of wall.

4. **Fill, Void or Cavity Material** – **Caulk** – Applied to fill the annular space around the flexible metal piping. In floors, a min 1 in. (25 mm) depth of fill material to be installed flush with top surface of floor. In walls, a min 1 in. (25 mm) depth of fill material to be installed flush with wall surface on both sides of wall assembly.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 26 in. (660 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) – Nom 14 in. (356 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. As an alternate, nom 14 in. (356 mm) diam (or smaller) sleeve fabricated from nom 0.028 in. (0.71 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

3. **Through Penetrants** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening or sleeve shall be min 0 in. (point contact) to max 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   - **A. Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   - **B. Iron Pipe** – Nom 24 in. (610 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 24 in diam (or smaller) Class 50 (or heavier) ductile iron pressure pipe.
   - **C. Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   - **D. Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   - **E. Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

4. **Firestop System** – The details of the firestop system shall be as follows:
   - **A. Packing Material** – Min 4 in. (102 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   - **B. Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. (6 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall.

   *3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant
   (Note: W Rating applies only when FB-3000 WT is used.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Certified Concrete Blocks*. Max diam of opening is 8 in. (203 mm).
   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1-7/8 in. (48 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 6 in. (152 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 6 in (152 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 4-1/2 in. (114 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be flush with top surface of floor or from both surfaces of wall.
   B. **Fill, Void or Cavity Material** – Min 1/16 in. (1.6 mm) dry thickness (min 1/8 in. or 3.2 mm wet thickness) of fill material sprayed or brushed into annular space on top surface of floor or both surfaces of wall to completely cover mineral wool and overlap a min of 1 in. (25 mm) onto penetrant and top surface of floor or both surfaces of wall.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 6 in. (152 mm).

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Sleeves** – (Optional) – The following sleeves may be used:
   - **Metallic Sleeve** – Nom 6 in. (152 mm) diam (or smaller) steel Schedule 40 (or heavier) pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces. As an alternate, nom 6 in. (152 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.
   - **Nonmetallic Sleeve** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces.

3. **Through Penetrants** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space shall be min 1/2 in. (13 mm) to max 2-3/8 in. (60 mm) Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types of pipe, conduit or tubing may be used:
   - **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   - **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or steel conduit.
   - **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type M (or heavier) copper tubing.
   - **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

4. **Firestop System** – The firestop system shall consist of the following:
   - **Packing Material** – Min 3-3/4 in. (95 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form so that the width of the wool is compressed at least 50 percent. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   - **Fill, Void or Cavity Material** – Sealant – Min 1/4 in. (6 mm) thickness of sealant applied within the annulus, flush with the top surface of floor or with both surfaces of wall.

**3M COMPANY** – FB-1000 NS, FB-1003SL or FB-3000 WT

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 10 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – Nom 10 in. diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly.

3. **Aluminum Conduit** – Nom 8 in. diam (or smaller) 0.063 in. wall thickness or heavier aluminum beverage conduit centered within the sleeve with a nominal annular space between conduit and periphery of opening or sleeve of 1 in. Conduit to be rigidly supported on both sides of wall assembly.

4. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Packing Material** – Min 3-1/2 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material. Min 2 in. thickness of mineral wool batt insulation installed within both ends of the conduit at its termination points.

   B. **Fill Void or Cavity Materials* – Caulk or Sealant** – Min 1 in. thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT is used.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 10-1/2 in. (267 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One metallic pipe or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between tube and periphery of opening shall be min 0 in. (point contact) to max 1-7/8 in. (48 mm). Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes or tubing may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 8 in. (201 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit, or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type M (or heavier) copper tube.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
      A1. **Forming Material** – As an alternate to the packing material in Item 3, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. As an option, the strips of min 1/2 in. (13 mm) thick compressible mat may be folded in half, lengthwise, and stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 2 in. (51 mm) depth. Top of forming material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caul fill material.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Packing Material
   B. **Fill Void or Cavity Materials** – **Caulk** – Min 1/4 in. (6 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both surfaces of wall.

F Rating – 2 Hr
T Rating – 0 Hr
W Rating – Class I (See Item 3)

1. **Floor or Wall Assembly** – Min 2-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 25-7/8 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One metallic pipe or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between tube and periphery of opening shall be min 0 in. to max 1-7/8 in. Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes or tubing may be used:
   A. **Steel Pipe** – Nom 24 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 24 in. diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. diam (or smaller) steel conduit, or nom 4 in. (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. diam (or smaller) Type M (or heavier) copper tube.
   E. **Copper Pipe** – Nom 6 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 2-1/4 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 1/2 in. diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both surfaces of wall.

   3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT is used.)

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete floor or min 3 in. (76 mm) thick, reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 10 in. (254 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

   1A. **Steel Sleeve** (Optional) – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe sleeve cast into concrete floor or wall. Sleeve to be flush with top and bottom surfaces of floor or both surfaces of wall.

2. **Through Penetrants** – One metallic pipe, tubing or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between tube and periphery of opening shall be min 0 in. to max 7/8 in. (22 mm). Penetrants to be rigidly supported on both sides of floor assembly. The following types and sizes of metallic pipes, tubing or conduit may be used:

   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit.

   D. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.

   E. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tube.

   F. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or both surfaces of wall to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Materials* – Caulk** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both surfaces of wall.

*3M COMPANY – FireDam 150+

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete floors or min 3 in. (76 mm) thick reinforced lightweight or normal weight concrete walls. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening 12-3/4 in. (324 mm). Max diam of opening in floors constructed of hollow-core concrete is 7 in. (78 mm).

See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional) - Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces. As an alternate, nom 12 in. (305 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through Penetrant** – One metallic pipe, conduit, tubing or flexible metal piping installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening or sleeve shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 10 in. (254 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – **Flexible Metal Piping** – The following types of steel flexible metal gas piping may be used:

      1.) Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly. **OMEGA FLEX INC**
      2.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly. **GASTITE, DIV OF TITEFLEX**
      3.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly. **WARD MFG INC**

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall or both ends of sleeve as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or top edge of sleeve or with both surfaces of wall or both ends of sleeves. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor or sleeve. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant  
   (Note: W Rating applies only when FB-3000 WT is used.)

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete floors or min 3 in. (76 mm) thick reinforced lightweight or normal weight concrete walls. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units**. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening 12 in. (305 mm). Max diam of opening in floors constructed of hollow-core concrete is 7 in. (178 mm). See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – Optional, Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces.

3. **Through-Penetrant** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening or sleeve shall be min of 0 in. (0 mm) (point contact) to max 2-1/2 in. (64 mm). The space between penetrants shall be min of 1/4 in. (6 mm) to max 2-1/2 in. (64 mm). Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   - **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   - **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   - **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel conduit or steel electrical metallic tubing.
   - **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing.
   - **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.
   - **Through Penetrating Product** – **Flexible Metal Piping** – The following types of steel flexible metal gas piping may be used:
     1.) Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
     2.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
     3.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

4. **Firestop System** – The details of the firestop system shall be as follows:
   - **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall or both ends of sleeve as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.
System No. C-AJ-1428

A1. **Forming Material*** – As an alternate to the packing material in Item 4A, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat folded in half, lengthwise, and stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 2 in. (51 mm) depth. Top of forming material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall or both ends of sleeve in wall as necessary to accommodate the required thickness of caulk fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.

**3M COMPANY**
**3M FIRE PROTECTION PRODUCTS** – Fire Barrier Packing Material

B. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or top edge of sleeve or with both surfaces of wall or both ends of sleeves. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor or sleeve. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core concrete.

**3M COMPANY**
**3M FIRE PROTECTION PRODUCTS** – **IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant**
(Note: W Rating applies only when FB-3000 WT Sealant is used.)

*Bearing the UL Classification Mark

© 2013 UL LLC
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 240 sq in. (1548 sq cm) with a max dimension of 30 in. (762 mm). Max area of opening in floors constructed of hollow-core concrete is 49 sq in. (316 sq cm) with a max dimension of 7 in. (178 mm).

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional, Not Shown) – Nom 16 in. (406 mm) diam (or smaller) circular sleeve fabricated from nom 0.028 in. (0.71 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through Penetrant** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Space between penetrants shall be min of 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 6 in. (152 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:
      1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly. **OMEGA FLEX INC.**
      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly. **GASTITIE, DIV OF TITEFLEX**
      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly. **WARD MFG INC.**

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor as required to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of wall. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core concrete.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

   (Note: W Rating applies only when FB-3000 WT is used.)

* Bearing the UL Classification Marking

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 12-3/4 in. (324 mm).

   See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

   1A. **Steel Sleeve** – (Optional, Not Shown) – Nom 12 in. (305 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

2. **Through-Penetrant** – One metallic pipe or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 10 in. (254 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   D. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
   E. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material. When optional steel sleeve is used, packing material to extend through floor or wall thickness except for recesses needed to accommodate fill material (Item 3B).

   B. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 1 in. (25 mm) thickness of caulk or putty applied within the annulus, flush with top surface of floor or with both surfaces of wall.

   3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant or MP+ putty

   (Note: W Rating applies only when FB-3000 WT is used.)

   C. **Duct Wrap Material** – Nom 2 in. (51 mm) thick duct wrap tightly wrapped around penetrant to extend 12 in. (305 mm) below floor and 36 in. (914 mm) above floor or 36 in. (914 mm) beyond both surfaces of wall. Longitudinal seams sealed with foil tape.

   3M COMPANY – Fire Barrier Duct Wrap 20A, 3M Fire Barrier Duct Wrap 615, 3M Fire Barrier Duct Wrap 615+
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 13-3/4 in. (349 mm).

   See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (optional) – Schedule 10 (or heavier) steel sleeve cast or grouted into slab, flush with bottom of floor. Sleeve may extend a max of 2 in. (51 mm) above top surface of floor or both surfaces of wall.

3. **Through Penetrant** – One metallic pipe or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and sleeve or periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 3 in. (76 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 10 in. (254 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. diam (or smaller) steel conduit or nom 4 in. diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from bottom surface of floor or from both surfaces of wall to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials** – *Caulk or Sealant* – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with bottom surface of floor or with both surfaces of wall.

System No. C-AJ-1540
February 26, 2008
F Ratings – 2 and 3 Hr (See Items 1 and 2)
T Rating – 0 Hr
L Rating At Ambient – 1 CFM/sq ft. (See Item 3B)
L Rating At 400 F – Less Than 1 CFM/sq ft. (See Item 3B)

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete required for 2 hr F Rating. Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete required for 3 hr F Rating. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 56 in.² (363 cm²) with a max dimension of 12-1/2 in. (318 mm) for square devices. Max diam of opening is 2-1/2 in. (64 mm) for nom 2 in. (51 mm) round devices and 4-1/2 in. (114 mm) for nom 4 in. (102 mm) round devices.

2. **Through Penetrant** – One or more metallic pipe, tubing or conduit may be installed concentrically or eccentrically within each firestop device (Item 3A). If multiple through penetrants are installed within the firestop device, through penetrants may be bundled together. Through penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of through penetrants may be used:
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 3 in. (76 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tube.
   D. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.
   E. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) steel electric metallic tubing (EMT) or rigid steel conduit.
   F. **Through-Penetrating Product** – Flexible Metal Piping – Nom 1-1/4 in. (32 mm) diam (or smaller) steel flexible metal piping.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Firestop Device** – A max of three square firestop devices may be ganged together. As an alternate, one round device may be centered within a round opening. Each device consists of a nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), a nom 4 by 4 by 10 in. (102 by 102 by 254 mm), a nom 2 in. (51 mm) diam by 10 in. (254 mm) or a nom 4 in. (102 mm) diam by 10 in. painted steel transit incorporating internal intumescent material, foam plugs and mounting flanges. In nom 2-1/2 by 2-1/2 in. (64 by 64 mm) devices, the max nom diam of the through penetrant (Item 2) shall not exceed 1-1/4 in. (32 mm). Firestop device to be centered within opening and installed with ends projecting an equal distance beyond each surface of the floor or wall assembly in accordance with the accompanying installation instructions. The annular space between the firestop device(s) and the periphery of the opening shall be 0 in. (point contact) to max 1/4 in. (6 mm). Firestop devices secured in place by means of fill material (Item 3B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of floor or wall after installation of fill material and secured to together with supplied steel set screws. Nom 1 in. (25 mm) thick foam plugs cut to accommodate the through penetrant(s) and installed flush with each end of device on both sides of floor or wall assembly.

3M COMPANY – 3M Fire Barrier Pass-Through Device

B. **Fill, Void or Cavity Materials** – **Caulk or Putty** – Min 1 in. (25 mm) thickness of fill material applied within the annulus between the outer perimeter of firestop device and periphery of opening prior to the installation of the mounting flanges, flush with top surface of floor or both surfaces of wall. When the annular space is 1/8 in. (3.2 mm) or less, the fill material in the annulus is optional. Also, as an option, foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device. L Rating applies only when fill material is applied within the annulus at interface of floor or both sides of wall and device(s) prior to the installation of the mounting flanges and with both ends of firestop device(s) filled with nominal 1/8 in. (3.2 mm) of Moldable Putty+.

3M COMPANY – Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT

*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete floors or min 3-1/2 in. (89 mm) thick reinforced lightweight or normal weight concrete walls. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening 28 in. (711 mm). Max diam of opening in floors constructed of hollow-core concrete is 7 in. (78 mm).

See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) – Nom 28 in. (711 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces.

3. **Through Penetrant** – One metallic pipe, conduit, tubing or flexible metal piping installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening or sleeve shall be min of 0 in. (0 mm, point contact) to max 3-7/8 in. (98 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 24 in. (610 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:
      1) Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **OMEGA FLEX INC**
      2) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **GASTITE, DIV OF TITEFLEX**
      3) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **WARD MFG INC**

4. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – (Optional, Not Shown) – Polyethylene backer rod or min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1 in. (25 mm) thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of walls. In floors constructed of hollow-core concrete, min 1 in. (25 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core floor.
      **3M COMPANY** – IC 15WB+ Caulk, CP 25WB+ Caulk or FB-3000 WT Sealant
      (Note - W Rating applies only when FB-3000 WT is used.)

UL System No. C-AJ-1552
XHEZ - Through-penetration Firestop Systems
XHEZ7 - Through-penetration Firestop Systems Certified for Canada

May 18, 2018

F Rating — 3 Hr
T Rating — 0 Hr
W Rating - Class I (See Item 4)

1. Floor or Wall Assembly — Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening in floor constructed of hollow-core precast concrete units is 7 in. (178 mm).

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. Steel Sleeve — (Optional) — Nom 26 in. (660 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into slab, flush with bottom of floor. Sleeve may extend a max of 2 in. (51 mm) above top surface of floor or both surfaces of wall.

3. Through-Penetrant — One metallic pipe or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and sleeve or periphery of opening shall be min of 0 in. (0 mm, point contact) to max 1-3/8 in. (35 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:

   A. Steel Pipe — Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. Iron Pipe — Nom 24 in. (610 mm) diam (or smaller) cast or ductile iron pipe.
   C. Conduit — Nom 6 in. diam (152 mm) (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. Copper Tubing — Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. Copper Pipe — Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

4. Fill, Void or Cavity Materials* — Caulk or Sealant — Min 1-1/2 in. (38 mm) thickness of caulk applied within the annulus, flush with bottom or top surface of floor or with both surfaces of wall or flush with the bottom surface of hollow-core floors.

3M COMPANY — CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant

Note: W Rating applies only when FB-3000 WT is used.

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 504 sq in. (0.33 m²) with a max dimension of 36 in. (914 mm).

See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** – One or more metallic pipes or conduits to be installed within the opening. The annular space between penetrants shall be min 5-1/2 in. (140 mm) to max 9-1/2 in. (241 mm). The annular space between the penetrant and the periphery of the opening shall be min 0 in. (point contact) to max 2-1/2 in. (64 mm). Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes or conduit may be used:

   A. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or steel conduit.
   B. **Copper Tube** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tube
   C. **Steel Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe
   D. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Firestop System** – The details of the firestop system shall be as follows;

   A. **Fill Void or Cavity Materials** – Pillows – 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 or 3 in. (51 or 76 mm) thick plastic covered pillows tightly packed to fill annular space between penetrants and periphery of opening and installed with 9 in. (229 mm) dimension projecting through the floor or wall and centered within the opening.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

   B. **Fill Void or Cavity Material** – Putty – (Not shown) Putty installed to fill voids and at the point location on the top surface of floor or both sides of wall.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Type MP+ Putty

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max diam of opening 10 in. (254 mm).

2. **Through-Penetrant** – One metallic pipe installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening shall be min 0 in. (point contact) to max 1-1/8 in. (29 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 40 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.

3. **Compression Coupling** – Nom 8 in. (203 mm) diam (or smaller) compression type high pressure pipe coupling with elastomeric plastic and a stainless steel shield. Coupling to be installed through the opening and extending max 1 in. (25 mm) above top surface of floor or beyond either surface of wall. Coupling secured to pipe with stainless steel hose clamps. Annular space between coupling and periphery of opening shall be min 0 in. (point contact) to max 1-1/8 in. (29 mm).

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Forming Material** – Polyethylene backer rod used as a permanent form. Backer rod to be friction-fitted into annular space and recessed min 1 in. (25 mm) from top surface of floor or both surfaces of wall.
   B. **Fill, Void or Cavity Material** – **Sealant** – Min 1 in. (25 mm) thickness of fill material applied within annulus, flush with top surface of floor or both surfaces of wall.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – IC 15WB+, CP 25WB+, and FB 3000WT

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Max diam of opening is 12-1/2 in. (318 mm).

2. **Through-Penetration** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 1/2 in. (13 mm) to max 3-3/8 in. (86 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor. The following types and sizes of metallic pipes, conduits or tubing may be used:
   
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – Foam – Min 1-1/2 in. (38 mm) thickness of fill material applied within the annulus, flush with top surface of floor or both surfaces of wall.

   **3M COMPANY** – Fire Barrier Rated Foam, FIP 1-Step

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max diam of opening is 12-1/2 in. (318 mm).
2. **Steel Sleeve** – Optional, nom 12-1/2 in. (318 mm) diam (or smaller) cylindrical sleeve fabricated from min 0.034 in. (0.86 mm) thick (22 gauge or heavier) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam, cast or grouted into opening. Length of steel sleeve to be equal to thickness of floor or wall, installed flush with both surfaces of floor or wall assembly. As an option, the sleeve may extend up to 2 in. above the top surface of floor.
3. **Through-Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 1/2 in. (13 mm) to max 3-3/8 in. (86 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
4. **Fill, Void or Cavity Material*** – **Foam** – Min 2-1/2 in. (64 mm) thickness of fill material applied within the annulus flush with top surface of floor or both surfaces of wall.

*3M COMPANY – Fire Barrier Rated Foam, FIP 1-Step
*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** – Min 2-1/2 in. (63 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 1656 sq in. (1.07 m²) with max dimension of 46 in. (1168 mm). See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Through-Penetrant** – A max of seven penetrants to be installed in opening. Min clearance between pipes, conduits or tubing is 0 in. (point contact). Min clearance between pipe, conduit, or tubing and periphery of through opening is 0 in. (point contact). Pipe conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of pipes, conduits, or tubing may be used:
   - **A. Steel Pipe** – Nom 12 in. (305 mm) diam, or smaller, schedule 10, or heavier, steel pipe.
   - **B. Copper Tubing** – Nom 4 in. (102 mm) diam, or smaller, Type L, or heavier, copper tubing.
   - **C. Conduit** – Nom 4 in. (102 mm) diam, or smaller steel electrical metallic tubing or steel conduit.

3. **Forms** – (Not Shown) - Used as a form to prevent leakage of fill material during installation. Forms to be a rigid sheet material, cut to fit the contour of the penetrating item and positioned as required to accommodate the required thickness of fill material. Forms to be removed after fill material has cured.

4. **Firestop System** – The firestop system shall consist of the following:
   - **A. Packing Material** – (Optional, Not Shown) - For floors greater than 2-1/2 in. (63 mm) thick, mineral wool batt insulation firmly packed into opening as a permanent or temporary form and recessed from the top surface of floor, or both surfaces of wall, to accommodate the required thickness of the fill material, Item 5B.
   - **B. Fill, Void, or Cavity Material** – **Mortar** – Min 2-1/2 in. (63 mm) thickness of fill material applied within the annulus. Mortar to be mixed with water in accordance with manufacturer’s instructions.

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

Reprinted from the Online Certifications Directory with permission from UL®
1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced light weight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max size of opening is 1296 in.² (0.836 m²) with a max dimension of 36 in. (914 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** — One or more pipes, conduit or tubing to be installed within the opening. The space between the pipes, conduit or tubing shall be min 1/2 in. (13 mm) to max 9-1/2 in. (241 mm), except that for copper penetrants, the min annular space shall be 3 in. (76 mm). The space between pipes, conduit or tubing and periphery of opening shall be min 3/4 in. (19 mm) to max 14 in. (356 mm), except that for copper penetrants, the min annular space shall be 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Conduit** — Nom 4 in. (102 mm) diam (or smaller) electrical metallic tubing or steel conduit. A maximum of twenty conduit may be installed within the opening.
   B. **Copper Tubing or Pipe** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing or Regular (or heavier) copper pipe. A maximum of one copper penetrant may be installed within the opening.
   C. **Steel Pipe** — Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe. A maximum of one penetrant exceeding 4 in. (102 mm) diam may be installed within the opening.
   D. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Firestop System** — The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material* —** Blocks to be firmly packed to fill the opening area between the grouping of conduit (Item 2A) and periphery of opening, and between and around all other individual penetrants to the periphery of the opening. Blocks installed with 5 in. (127 mm) dimension projecting through opening, flush with bottom surface of floor or centered in wall. For floors and walls thicker than 5 in. (127 mm), the fire block can be installed flush with either side of floor or wall. In concrete block walls, fire block to fill entire thickness of wall opening unless concrete block is solid filled. Blocks can be cut to fit around penetrants and within smaller annular spaces.
   B. **Fill, Void or Cavity Material* — Foam** — Fill material installed to fill the entire annular space within and around the grouping of conduit penetrating items to a min thickness of 5 in. (127 mm). Fill material to be forced between blocks and periphery of opening to the max extent possible. Fill material to be injected in-between blocks and penetrants to the full depth of the blocks, as well as in any visible voids/openings between blocks (Item 3A).

* Indicates such products shall bear the UL or eUL Certification Mark for jurisdictions employing the UL or eUL Certification (such as Canada), respectively.

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced light weight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max size of opening is 900 in.² (5806 cm²) with a max dimension of 30 in. (762 mm).

See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** — A maximum of nine pipes, conduit or tubing to be installed within the opening. The space between the pipes, conduit or tubing shall be min 3-1/2 in. (13 mm) to max 9-1/2 in. (241 mm). The space between pipes, conduit or tubing and periphery of opening shall be min 2 in. (51 mm) to max 14 in. (356 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall. The following types and sizes of metallic pipes, conduits or tubing may be used:
   - **A. Conduit** — Nom 4 in. (102 mm) diam (or smaller) electrical metallic tubing or steel conduit.
   - **B. Copper Tubing or Pipe** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing or Regular (or heavier) copper pipe. A maximum of one copper penetrant may be installed within the opening.
   - **C. Steel Pipe** — Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe. A maximum of one penetrant exceeding 4 in. (102 mm) diam may be installed within the opening.
   - **D. Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Firestop System** — The firestop system shall consist of the following:
   - **A. Fill, Void or Cavity Material** — Blocks to be firmly packed to completely fill the opening area between and around the penetrants and to the periphery of opening. Blocks installed with 5 in. (127 mm) dimension projecting through opening, flush with bottom surface of floor or centered in wall. For floors and walls thicker than 5 in. (127 mm), the fire block can be installed flush with either side of floor or wall. In concrete block walls, fire block to fill entire thickness of wall opening unless concrete block is solid filled. Blocks can be cut to fit around penetrants and within smaller annular spaces.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — 3M™ Fire Barrier Block B258, 3M™ Fire Barrier Plank PK39

   - **B. Fill, Void or Cavity Material** — Sealant or Caulk — Sealant to be forced between blocks and periphery of opening to the max extent possible. Sealant to be forced in-between blocks and all penetrants to the full depth of the blocks, as well as in any visible voids/ openings between blocks.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — CP 25WB+ Caulk or FB-3000 WT Sealant

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
System No. C-BJ-1020
May 18, 2005
F Rating – 4 Hr
T Ratings – 0, 3/4 and 1-1/2 Hr (See Item 2)
L Rating At Ambient – 2 CFM/sq ft
L Rating At 400 F – Less Than 1 CFM/sq ft

1. **Floor or Wall Assembly** – Min 5-1/2 in. (140 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 1500 sq in. (9677 sq cm²) with max dimension of 50 in. (127 cm)

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Pipe or Conduit** – Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe, nom 6 in. (152 mm) diam (or smaller) steel conduit, nom 4 in. (102 mm) diam (or smaller) steel EMT or nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing. Pipe, conduit or EMT rigidly supported on both sides of floor or wall assembly. When max 4 in. (102 mm) diam steel pipe, conduit or EMT is used, T Rating is 3/4 hr. When max 2 in. (51 mm) diam steel pipe, conduit or EMT is used, T Rating is 1-1/2 hr. When copper tubing is used or when steel pipe or conduit larger than 4 in. (102 mm) is used, T Rating is 0 hr.

3. **Fill, Void or Cavity Material** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. (51 mm) wide by 24 in. (610 mm) long strips. Single layer of wrap strip tightly-wrapped around each copper pipe and each steel pipe or conduit larger than nom 4 in. (102 mm) diam. Wrap strip layer installed with foil side exposed and secured in place with steel wire ties. When tight grouping of steel pipes, conduits or EMT does not readily permit tight installation of the intumescent sheet (Item 4) around the individual pipes, the grouping of steel pipes, conduits or EMT shall be wrapped with a single piece of wrap strip with the wrap strip drawn in between the individual pipes using steel wires so as to follow the contours of the pipe grouping as tightly as possible. Wrap strip to extend approx 7/8 in. (22 mm) beyond each face of the intumescent sheet (Item 4) on both sides of the floor or wall assembly. Wrap strip layer not required on individual nom 4 in. (102 mm) diam (or smaller) steel pipe, conduit or EMT.

*3M COMPANY – FS-195+
4. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheet cut to tightly-follow the contours of the individual pipes, conduits and EMT and the contours of the wrap strip (Item 3) on the pipes and grouped pipes, conduits and EMT. Sheets to lap a min of 2 in. (51 mm) on the floor or wall surface on all sides of the opening on both sides of the floor or wall assembly. Sheet to be installed with galv steel sheet backer exposed (aluminum foil facing against floor or wall surface) and secured to floor or wall surface with min 3/16 in. (5 mm) diam by 1-1/4 in. (32 mm) long steel masonry fasteners with min 1-1/4 in. (32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of butted seams or slits made to permit installation of the sheet around the individual penetrating items.

3M COMPANY – CS-195+

5. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick galv steel centered over butted seams of adjoining intumescent sheets and over entire length of each slit made in intumescent sheet (Item 4) to permit installation about the penetrating item(s). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulk (Item 8). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

6. **Support Channel** – When area of through opening exceeds 750 sq in. (4839 sq cm²), an intermediate support channel shall be installed on each side of floor or wall assembly, flush with floor or wall surface. Support channels to be min 1-5/8 in. by 1-5/8 in. (41 mm by 41 mm) and formed of min 0.093 in. (2.4 mm) thick (No. 12 ga) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. When steel support channels are centered beneath butted seams of intumescent sheets, no steel cover strip (Item 5), is required over butted seam. Intumescent sheets secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. (76 mm) OC on each side of butted seam. When support channel is located away from intumescent sheet seam, fasteners spaced max 6 in. (152 mm) OC. Prior to installation of the intumescent sheet(s), a nom 1/4 in. (6 mm) diam continuous bead of caulk (Item 8) shall be applied as a gasket over the steel support channel.

7. **Packing Material** – When tightly-grouped steel pipes, conduits or EMT are encircled with a contoured wrap of wrap strip (Item 3), the interstices between the pipes within the wrap strip shall be firmly packed with a nom 1 in. (25 mm) thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation. Packing material to be recessed 1 in. (25 mm) from edge of wrap strip on each side of floor or wall assembly.

8. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Generous application of caulk to be applied around the base of the individual cables, pipes, conduits, EMT and contour applied wrap strips at their egress from the intumescent sheet on both sides of the floor or wall assembly. An additional bead of caulk shall be applied to the exposed edges of the wrap strip at its interface with the grouped pipes, insulated steel pipe and cable bundle on both sides of floor or wall assembly. An additional 1/4 in. (6 mm) diam bead of caulk shall be applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter. When tightly-grouped steel pipes, conduits, or EMT are encircled with a contoured wrap of wrap strip (Item 3), a min 1 in. (25 mm) thickness of caulk shall be applied over the packing material (Item 7) to completely fill the cavity within the wrap strip on each side of the floor or wall assembly.

3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

1. **Floor or Wall Assembly** – Min 6 in. thick UL Classified hollow-core *Precast Concrete Units*. Floor may also be constructed of any min 6 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Max diam of opening is 2 in.

   See *Precast Concrete Units* (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of floor assembly. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (point contact) to max 7/8 in. The following types and sizes of metallic pipes, conduits or tubings may be used:
   A. **Steel Pipe** – Nom 1 in. diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 1 in. diam (or smaller) steel electrical metallic tubing or steel conduit.
   C. **Copper Tubing** – Nom 1 in. diam (or smaller) Type L (or heavier) copper tube.
   D. **Copper Pipe** – Nom 1 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. thickness of fill material applied within annulus, flush with each surface of floor. Min 1/2 in. diam bead of caulk applied to the penetrant/concrete interface at the point contact location on both sides of floor.

   *3M COMPANY* – CP 25WB+ caulk or FB-3000 WT sealant.

1. **Floor Assembly** – The 4 Hr fire-rated concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D700 series design in the UL Fire Resistance Directory and as summarized below:
   A. **Steel Floor and Form Units** – Composite or non-composite 3 in. deep fluted galv units as specified in the individual floor-ceiling design. Max size of opening is 25-1/4 in.
   B. **Concrete** – Min 3 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete.
   C. **Spray-Applied Fire Resistive Materials** – Min 11/16 in. thickness spray-applied fire resistive material applied to all surfaces of steel floor units.

2. **Through Penetrants** – One metallic pipe, tubing or conduit to be installed eccentrically or concentrically within the opening. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1-1/2 in. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of metallic pipes, tubing or conduit may be used:
   A. **Steel Pipe** – Nom 10 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Steel Pipe** – Nom 24 in. diam (or smaller) Schedule 40 (or heavier) steel pipe.
   C. **Iron Pipe** – Nom 24 in. diam (or smaller) cast or ductile iron pipe.
   D. **Copper Tube** – Nom 6 in. diam (or smaller) Type M (or heavier) copper tube.
   E. **Copper Pipe** – Nom 6 in. diam (or smaller) Regular (or heavier) copper pipe.
   F. **Conduit** – Nom 6 in. diam (or smaller) rigid steel conduit.
   G. **Conduit** – Nom 4 in. diam (or smaller) electrical metallic tubing.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 2 in. thickness of min 4 pcf density mineral wool batt insulation firmly packed into the annular space and recessed to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 3/4 in. thickness of caulk applied within the annulus, flush with the top surface of the floor. An additional 1/2 in. diam bead of caulk applied to the penetrant/concrete interface at point contact location on top surface of the floor.

*Bearing the UL Classification Marking

Copyright © 2010 Underwriters Laboratories Inc.
1. **Floor Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may project up to a max of 5-1/2 in. (140 mm) above top surface of floor for nom 2 in. (51 mm) diam (and smaller) penetrants.

   **3M COMPANY** – 3M Fire Barrier Cast-In Device 2MCID, 3MCID, 4MCID.

3. **Through Penetrants** – One metallic pipe, tubing or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The nom pipe or conduit size shall match the nom size of the firestop device with the exception that both nom 1-1/2 and 2 in. (38 and 51 mm) pipes or conduits are suitable for use with the nom 2 in. (51 mm) device. The following types of metallic pipes or conduits may be used:
   
   A. **Steel Pipe** – Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Cast or ductile iron pipe.
   C. **Conduit** – Steel conduit or steel electrical metallic tubing.
   D. **Copper Tubing** – Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Regular (or heavier) copper pipe.

   **The hourly T Rating is 1-1/4 Hr for nom 1-1/2 in. (38 mm) diam steel and iron pipes and conduit when the firestop device extends a min of 2 in. (51 mm) above top surface of floor. The T Rating is 0 hr for all other penetrants.**

4. **Packing Material** – (Not Shown) – Min 1/2 in. (13 mm) thick of min 4 pcf (64 kg/m³) mineral wool batt insulation shall be tightly packed within the firestop device around the penetrant, flush with the top surface of floor for all nom 3 in. and 4 in. (76 and 102 mm) penetrants. Packing material is optional with all nom 1-1/2 in. and 2 in. (38 and 51 mm) diam penetrants and may be flush with top surface of floor or top of device.

5. **Fill, Void or Cavity Materials – Putty** – (Not Shown) – As an alternate to the packing material (Item 4), a min 1/2 in. (13 mm) thickness of putty may be installed within the firestop device around the penetrant, flush with the top surface of floor for all nom 3 in. and 4 in. (76 and 102 mm) diam penetrants.

   **3M COMPANY** – MP+ Stix putty

6. **Fill, Void or Cavity Materials – Sealant** – (Optional, Not Shown) – For W Rating, a min 1/4 in. (6 mm) bead of sealant is required at the device/concrete interface on the top surface of the floor. When nom 1-1/2 in. (38 mm) diam pipe is installed in nom 2 in. (51 mm) diam device, a min 1/2 in. (13 mm) depth of sealant is required in the annular space between the pipe and the inside of the device to attain the W and L Ratings.

   **3M COMPANY** – FB-1000 NS Sealant, FB-1003 SL Sealant or FB-3000 WT Sealant

*Bearing the UL Classification Mark*

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may project up to a max 3-1/2 in. (89 mm) above top surface of floor or must be trimmed flush with top surface of floor, dependent on the type and size of penetrant, as shown in Item 3.

   3M COMPANY – 3M Fire Barrier Cast-In Device 2MCID, 3MCID, 4MCID.

   2A. **Firestop Device – Height Adapter** – (Not Shown) - For use in floors greater than 8 in. (203 mm) thick. Adapter snaps onto top of firestop device (Item 2).

   3M COMPANY – 3M Fire Barrier Cast-In Device Height Adapter, 2HA, 3HA, 4HA.

3. **Through Penetrants** – One metallic pipe, tubing or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The nom pipe or conduit size shall match the nom size of the firestop device with the exception that both nom 1-1/2 and 2 in. (38 and 51 mm) pipes or conduits are suitable for use with the nom 2 in. (51 mm) device. The following types of metallic pipes or conduits may be used:

   A. **Steel Pipe** – Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Cast or ductile iron pipe.
   C. **Conduit** – Steel conduit or steel electrical metallic tubing.
   D. **Copper Tubing** – Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Regular (or heavier) copper pipe.

   The Hourly T Rating is dependent on the type and size of penetrant, the use of flush or extended device and the use or non-use of packing material or putty, as shown below. The ratings for the extended devices are dependent on the device extending a min of 2 in. (51 mm) above surface of floor. If the device extends less than 2 in. (51 mm) above floor, the ratings shown for the flush devices apply.

4. **Packing Material** (Not Shown) – Min 2 in. (51 mm) thick of min 4 pcf (64 kg/m³) mineral wool batt insulation shall be tightly packed within the firestop device around the penetrant, flush with the top surface of floor, where indicated in above table.

5. **Fill, Void or Cavity Materials – Putty** (Not Shown) – As an alternate to the packing material (Item 4), a min 1 in. (25 mm) thickness of putty may be installed within the firestop device around the penetrant, flush with the top surface of floor for all nom 3 in. and 4 in. (76 and 102 mm) diam penetrants.

   **3M COMPANY** – MP+ Stix putty

6. **Fill, Void or Cavity Materials – Sealant** (Optional, Not Shown) – For W Rating, a min 1/4 in. (6 mm) bead of sealant is required at the device/concrete interface on the top surface of the floor. When nom 1-1/2 in. (38 mm) diam pipe is installed in nom 2 in. (51 mm) diam device, a min 1/4 in. (6 mm) depth of sealant atop a nom 2 in. (51 mm) depth of packing material is required in the annular space between the pipe and the inside of the device to attain the W and L Ratings.

   **3M COMPANY** – FB-1000 NS Sealant, FB-1003 SL Sealant or FB-3000 WT Sealant

1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.
   B. **Steel Floor and Form Units** – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. **Firestop Device – Metal Deck Adapter** – Nom adapter size to correspond with nom penetrant size (Item 3), except that 2 in. (51 mm) adapter is suitable for both nom 1-1/2 in. and 2 in. (38 mm and 51 mm) penetrants. Adapter to be installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.

3. **Through Penetrants** – One metallic pipe, tubing or conduit installed within the firestop system. Pipe, tubing or conduit to be rigidly supported on both sides of floor assembly. The nom pipe, tubing or conduit size shall correspond to the nom size of the firestop device with the exception that both nom 1-1/2 in. and 2 in. (38 mm and 51 mm) pipes, tubing or conduits are suitable for use with the nom 2 in. (51 mm) device. The following types of metallic pipes, tubing or conduits may be used:
   A. **Steel Pipe** – Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Cast or ductile iron pipe.
   C. **Conduit** – Steel conduit or steel electrical metallic tubing.
   D. **Copper Tubing** – Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Regular (or heavier) copper pipe.

4. **Packing Material** – (not shown) - Min 1/2 in. (13 mm) thick of min 4 pcf (64 kg/m³) mineral wool batt insulation shall be tightly packed within the firestop device around the penetrant, flush with the top surface of floor for all nom 3 in. and 4 in. (76 mm and 102 mm) penetrants. Packing material is optional with all nom 2 in. (51 mm) diam (and smaller) penetrants and may be flush with top surface of floor or top of device.

5. **Fill, Void or Cavity Materials – Putty** – (not shown) - As an alternate to the packing material (Item 4), a min 1/2 in. (13 mm) thickness of putty may be installed within the firestop device around the penetrant, flush with the top surface of floor for all nom 3 in. and 4 in. (76 mm and 102 mm) penetrants.

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max of 3-1/2 in. (89 mm) above top surface of floor.

   3M COMPANY – 3M Fire Barrier Cast-In Device 2MCID, 3MCID, 4MCID

2A. **Firestop Device - Height Adapter** – (Not Shown) – For use in floors greater than 8 in. (203 mm) thick. Adapter snaps onto top of firestop device (Item 2).

   3M COMPANY – 3M Fire Barrier Cast-In Device Height Adapter, 2HA, 3HA, 4HA

3. **Through Penetrant** – One or more metallic pipes, conduits or tubes installed concentrically or eccentrically within the firestop system. Annular space between penetrants and periphery of opening shall be min of 0 in. (0 mm, point contact) to max 2 in. (51 mm). Space between penetrants shall be min of 1/4 in. (6 mm) to max 2 in. (51 mm) Penetrants to be rigidly supported on both sides of floor assembly. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 1-1/2 in. (38 mm) diam (or smaller) steel conduit or steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 1 in. (25 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 1 in. (25 mm) diam (or smaller) Regular (or heavier) copper pipe.

4. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed within annulus, flush with the top surface of floor.

4A. **Fill, Void or Cavity Materials – Sealant, Caulk or Putty** – (Optional, Not Shown) – As an option, the packing material (Item 4) may be reduced in thickness by 1/4 (6 mm) to 1/2 in. (13 mm) and recessed from the top surface of floor to accommodate a 1/4 (6 mm) to 1/2 in. (13 mm) thickness of sealant, caulk or putty, installed within annulus, flush with the top surface of floor. For W and L Ratings, sealant is required. For W Rating, a min 1/4 in. (6 mm) bead of sealant is also required at the device/concrete interface on the top surface of the floor.

   3M COMPANY – FB-1000 NS sealant, FB-1003 SL sealant, CP 25WB+ caulk, FB-3000 WT sealant, FireDam 150+ caulk, IC 15WB+ caulk or MP+ Stix putty

   (Note: W and L Ratings apply only when FB-1000 NS, FB-1003 SL or FB-3000 WT sealants are used.)

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. As an alternate, any min 2 hr fire rated D700, D800 or D900 Series Floor-Ceiling Design in the UL Fire Resistance Directory having a min 2-1/2 in. (64 mm) thickness of lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete topping over the steel deck may be used. Max diam of opening is 12-3/4 in. (324 mm).

1A. **Steel Sleeve** – (Optional, Not Shown) – Nom 12 in. (305 mm) diam (or smaller) sleeve fabricated from nom 0.028 in. (0.71 mm) thick galv steel cast or grouted into floor assembly flush with floor surfaces.

2. **Through-Penetration** – One metallic pipe or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of floor assembly. The following types and sizes of penetrants may be used:
   
   A. **Steel Pipe** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 10 in. (254 mm) diam (or smaller) cast or ductile iron pipe.
   
   C. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   D. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
   
   E. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Packing Material** – Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Materials** – *Caulk, Sealant or Putty* – Min 1 in. (25 mm) thickness of caulk or putty applied within the annulus, flush with top surface of floor.
   
   3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant or MP+ putty
   
   (Note: W Rating applies only when FB-3000 WT is used.)
   
   C. **Duct Wrap Material** – Nom 2 in. (51 mm) thick duct wrap tightly wrapped around penetrant to extend 36 in. (914 mm) above floor. An additional layer of nom 2 in. (51 mm) thick duct wrap tightly wrapped around the first layer of duct wrap to extend 12 in. (305 mm) (914 mm) above floor. All longitudinal seams of both layers of duct wrap are sealed with foil tape.
   
   3M COMPANY – Fire Barrier Duct Wrap 20A, 3M Fire Barrier Duct Wrap 615, 3M Fire Barrier Duct Wrap 615+

*Bearing the UL Classification Mark

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max size of opening shall be 180 in² (1161 cm²) with a max dimension of 18 in. (457 mm).

2. **Metallic Pipes** – One or more metallic pipe, tubing or conduit installed concentrically or eccentrically within opening. Annular space between penetrants and between penetrants and periphery of opening shall be min 1/4 in. (6 mm) to max 4 in. (102 mm). Penetrants to be rigidly supported on both sides of floor assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or rigid steel conduit.
   C. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   D. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.

   The hourly T Rating for the firestop system is 1/4 Hr for penetrants D and E, 1/2 Hr for penetrants A, B and C greater than nom 2 in. (51 mm) diam and 1-3/4 for penetrants A, B and C of nom 2 in. (51 mm) diam and smaller.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Forms** – (not shown) – Rigid sheet material cut to the contour of the penetrants and attached to the underside of the floor to prevent leakage of mortar. Forms to be removed after mortar has cured.
   B. **Fill, Void or Cavity Material** – Mortar – Mortar to be mixed with water in accordance with the manufacturer’s instructions. Min 3 in. (76 mm) thickness of mortar applied within the annulus.

   **3M COMPANY** – 3M Fire Barrier Mortar

*Bearing the UL Classification Mark

1. **Floor Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** — Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max of 3-1/2 in. (89 mm) above top surface of floor.

   **3M COMPANY** — 3M Fire Barrier Cast-In Device 6MCID

   2A. **Firestop Device - Height Adapter** — (Not Shown) - For use in floors greater than 8 in. (203 mm) thick. Adapter snaps onto top of firestop device (Item 2).

   **3M COMPANY** — 3M Fire Barrier Cast-In Device Height Adapter, 6HA

3. **Through Penetrant** — One metallic pipe, tubing or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The following types and sizes of metallic pipes or conduits may be used:

   - **Steel Pipe** — Nom 6 in. (152 mm) diam Schedule 5 (or heavier) steel pipe.
   - **Iron Pipe** — Nom 6 in. (152 mm) diam cast or ductile iron pipe.
   - **Conduit** — Nom 6 in. (152 mm) diam rigid steel conduit.
   - **Copper Tubing** — Nom 6 in. (152 mm) diam Type L (or heavier) copper tubing.
   - **Copper Pipe** — Nom 6 in. (152 mm) Regular (or heavier) copper pipe.

4. **Packing Material** — Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation tightly packed within the firestop device around the penetrant, flush with the top surface of floor.

5. **Pipe Tee Fitting System** — (Optional, Not Shown) — For use with Iron Pipe (Item 3B) only, One nom 6 in. (152 mm) diam (or smaller) PVC TESTRITE TEE Fitting (matched to penetrant diameter). The PVC TESTRITE TEE Fitting is secured to metallic penetrant (Item 3B) with compression type pipe coupling elastomeric gasket with stainless steel jacket and stainless steel band clamps for use in vented (drain, waste or vent) iron pipe systems. Installed (Item 3B) penetrant shall extend a minimum of 6 in. (152 mm) above the surface of the floor and minimum 12 in. (302 mm) below the bottom surface of the floor above assembly.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete topping.
   B. **Steel Floor and Form Units** – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. **Firestop Device - Metal Deck Adapter** – Adapter installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.
      
      3M COMPANY – 3M Fire Barrier Cast-In Device Metal Deck Adapter, 6MDA
   B. **Firestop Device** – Snapped into top of metal deck adapter in accordance with accompanying installation instructions. The device shall be trimmed flush with top surface of floor.
      
      3M COMPANY – 3M Fire Barrier Cast-In Device, 6MCID

3. **Through Penetrants** – One metallic pipe, tubing or conduit installed within the firestop system. Pipe, tubing or conduit to be rigidly supported on both sides of floor assembly. The following types of metallic pipes, tubing or conduits may be used:
   A. **Steel Pipe** – Nom 6 in. (152 mm) diam Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 6 in. (152 mm) diam cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam steel conduit.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam Regular (or heavier) copper pipe.

4. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation shall be tightly packed within the firestop device around the penetrant, flush with the top surface of floor.

*Bearing the UL Classification Mark

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max area of opening 98 in.² (632 cm²) with max dimension of 14 in. (356 mm).

2. **Through-Penetrant** – One or more metallic pipes, conduit or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening shall be min 0 in. (point contact) to max 11-5/8 in. (295 mm). Minimum separation between penetrants shall be 1 in. (25 mm). Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 2 in. (51 mm) diam (or smaller) cast or ductile iron pipe.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 4 in. (102 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials** – **Sealant** – Min 1/2 in. (13 mm) thickness of sealant applied within the annulus, flush with top surface of floor. Additional material to lap min 1/2 in. (13 mm) onto top surface of concrete around entire perimeter of opening. At point contact, apply min 1/4 in. (6 mm) bead at penetrant/concrete interface on top surface of floor.

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Max diam of opening is 10-1/2 in.

2. **Through-Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening or sleeve shall be min of 0 in. (point contact) to max 1-7/8 in. Pipe, conduit or tubing to be rigidly supported on both sides of floor assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   
   A. **Steel Pipe** – Nom 8 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 8 in. diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 8 in. diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   
   C. **Conduit** – Nom 6 in. diam (or smaller) steel conduit or nom 4 in. diam (or smaller) steel electrical metallic tubing.
   
   D. **Copper Tubing** – Nom 4 in. diam (or smaller) Type M (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 4 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Packing Material** – Min 3-3/4 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from bottom surface of floor as required to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Materials** – **Sealant** – Min 1/4 in. thickness of fill material applied within the annulus, flush with bottom surface of floor. Min 1/4 in. diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the bottom surface of floor.

1. **Floor Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Floor Sink** – Max 12 in. wide by 12 in. long by 10 in. (305 by 305 by 254 mm) deep iron waste drain floor sink permanently embedded during concrete pour or grouted into concrete assembly. Sink to be max 1/4 in. (7 mm) above plane of floor assembly. Opening to be max 2 in. (51 mm) wider and longer than the in-floor dimension of the floor sink.

3. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe to be secured to outlet of floor sink with no-hub coupling and to be rigidly support beneath floor away from floor sink with suitable hangers.

4. **Compression Coupling** – Nom 4 in. diam (or smaller) compression type high pressure pipe coupling with elastomeric plastic and a stainless steel shield. Coupling to be secured to pipe with stainless steel hose clamps at any point beyond the bottom of floor.

5. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials** – Nom 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Wrap strip tightly wrapped around each compression coupling. Wrap strip layers held in position using aluminum foil tape, steel wire tie, or equivalent.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** – 3M Fire Barrier Tuck-In WS Wrap Strip

   B. **Duct Wrap Materials** – Nom 1-1/2 in. (45 mm) thick duct wrap tightly wrapped around sink and drain pipe. An additional layer of nominal 1-3/4 in. (45 mm) thick duct wrap tightly wrapped around the first layer. Both layers of duct wrap shall extend a minimum of 24 in. (610 mm) beyond the bottom of floor and are held in position using filament tape or equivalent. Flared wrap extending around penetrant to overlap minimum 4 in. (102 mm) on underside of floor and secured with min. 1 in. (25 mm) wide by 1/8 in. (3 mm) wide by 15 in. (381 mm) long steel bar stock, nom 3/4 in. (20 mm) fender washers, nom 3-3/4 in. (95 mm) long masonry anchors and min 1/2 in. (13 mm) wide by 0.020 in. (0.5 mm) thick carbon or stainless steel straps. Banding straps spaced max 8 in. (203 mm) OC and extend to secure duct wrap layers to the steel bar.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** – 3M Fire Barrier Duct Wrap 615+

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

SECTION A-A  

1. Floor Assembly  
– Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100–150 pcf or 1600–2400 kg/m³) concrete.

1A. Floor Assembly  
– The fire rated protected or unprotected concrete and steel floor shall be constructed of the materials and in the manner specified in the individual D700 or D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. Concrete  
      – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100–150 pcf or 1600–2400 kg/m³) concrete.
   B. Steel Floor and Form Units*  
      – Composite or non-composite max 2 in. (51 mm) deep galv steel fluted units as specified in the individual Floor-Ceiling Design.
   C. Spray-Applied Fire Resistive Material  
      – (Optional. Not Shown.)  
      – Steel floor units may be sprayed with the type and thickness of fire resistive material indicated in the individual D700 Series Design.

UNITED STATES MINERAL PRODUCTS CO, DBA ISOLATEK INTERNATIONAL  
— Type 300

GCP APPLIED TECHNOLOGIES INC  
— MK-6/HY+

2. Floor Sink and Grate  
– Max 12 in. wide by 12 in. long by 10 in. (305 by 305 by 254 mm) deep cast iron waste drain floor sink permanently embedded during concrete pour or grouted into concrete assembly. Cast iron floor grating to be installed at top of sink. Metal dome strainer may be used in sink drain. Sink flanges to bear on top plane of floor assembly.

3. Iron Pipe  
– Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe to be secured to outlet of floor sink with no-hub coupling and to be rigidly supported beneath floor away from floor sink with suitable hangers.

4. Compression Coupling  
– Nom 4 in. diam (or smaller) compression type high pressure pipe coupling with elastomeric plastic and a stainless steel shield. Coupling to be secured to pipe with stainless steel hose clamps at any point beyond the bottom of floor.

5. Firestop System  
– The firestop system shall consist of the following:
   A. Duct Wrap Materials*  
      – Two layers of nom 1-1/2 in. (38 mm) thick faced or unfaced duct wrap to be tightly wrapped around sink and drain pipe. Both layers of duct wrap shall extend a minimum of 24 in. (610 mm) beyond the bottom of floor or the valley of the steel floor units and are held in position using wire ties. Duct wrap layers to butt tightly against bottom surface of floor. When fluted steel floor units (Item 1A) are used, the duct wrap layers shall be caste cut to follow the profile of and butt tightly against the fluted deck. Duct wrap held in position using nom 16 ga steel wire ties spaced max 8 in. (203 mm) on center and max 1 in. (25 mm) from ends of layers and bottom of floor or bottom valley of fluted deck.

3M COMPANY  
3M FIRE PROTECTION PRODUCTS  
– 3M™ Fire Barrier Duct Wrap 615+

B. Fill, Void or Cavity Material*  
– Sealant  
– Min 1/2 in. (13 mm) bead of fill material applied around periphery of duct wrap floor at interface with bottom surface of floor or steel floor units. Sealant shall be applied to the contour of the steel floor units.

3M COMPANY  
3M FIRE PROTECTION PRODUCTS  
– IC 15WB+, CP 25WB+ caulk, FB-3000 WT sealant

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

1. **Floor or Wall Assembly** – Min 6 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Floor may also be constructed of any min 6 in. thick UL Classified hollow-core **Precast Concrete Units***. Max diam of opening is 2 in.

   See **Precast Concrete Units** (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Conduit** – Nom 1 in. diam (or smaller) steel conduit, steel EMT or steel flexible conduit. The space between conduit and periphery of opening shall be min 1/8 in. to max 1/2 in. Conduit to be rigidly supported on both sides of floor assembly.

3. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 1-1/4 in. thickness of fill material applied within the annulus, flush with bottom surface of floor. Min 1/2 in. thickness of fill material applied within the annulus, flush with top surface of floor.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

   ++Bearing the UL Listing Mark

1. **Floor Assembly** – Min 6-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete.

2. **Aerator Adapter** – Nom 14 in. by 9 in., min 4 in. deep cast-in-place galv steel adapter box provided with max 5 in. diam opening on top side. Firestop device (Item 3) mechanically fastened to the top side of box prior to placement of the concrete. The concrete thickness on top of adapter box shall be a min 2-1/2 in.

2A. **Firestop Device-Aerator Adapter** – As an alternate to Item 2, a nom 10 in. by 7 in. by 4 in. deep nonmetallic adapter box may be used. Firestop device (Item 3) latched to the top side of box with snaps provided as part of the adapter prior to placement of the concrete. The concrete thickness on top of adapter box shall be a min 2-1/2 in.

3. **Firestop Device** – The firestop device is mechanically attached to top of adapter (Item 2) with a min of four No. 8 (or larger) steel sheet metal screws or latched to the top side of nonmetallic box and cast in place and permanently embedded during concrete placement in accordance with accompanying installation instructions.

4. **Drain Piping** – Nom 3 in. or 4 in. diam cast or ductile iron pipe. Drain piping rigidly supported on both sides of floor assembly.

5. **Aerator Fitting** – (Not Shown) – Nom 3 in. or 4 in. diam cast iron aerator fitting attached to drain piping below floor assembly. Fitting shall not penetrate the firestop device.

1. **Wall Assembly** – Min 6 in. (152 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 12 in. (305 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Pipe or Conduit** – Nom 3 in. (76 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe, steel conduit or steel electrical metallic tubing. Multiple pipes and/or conduit permitted in opening provided a min separation of 1/4 in. (6 mm) is maintained between pipes or conduits. Pipes and/or conduits to be rigidly supported on both sides of the wall assembly. The T Rating of the firestop system is dependent upon the max diam of the pipes or conduits, as tabulated below:

<table>

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 225 in² (0.15 m²) with a max dimension of 22-1/2 in. (572 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through-Penetrant** – One or more nom 4 in. (102 mm) diam (or smaller) rigid steel conduit or electrical metallic tubing (EMT) installed either concentrically or eccentrically within the firestop system. The annular space between conduits or tubing and periphery of opening shall be min 0 in. (0 mm, point contact) to max 4 in. (102 mm). The horizontal space between conduits or tubing shall be min 1/4 in. (6 mm) to max 4 in. (102 mm). The vertical space between conduits or tubing shall be min 1-1/2 in. (38 mm) to max 4 in. (102 mm). Conduit or tubing to be rigidly supported on both sides of wall assembly.

3. **Firestop System** – The firestop system shall consist of the following:

   A. Fill Void or Cavity Material* – Putty – Min 2 in. (51 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at all corners of opening and extending a min 1 in. (25 mm) both directions from each corner, flush with both surfaces of wall. Min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of putty wrapped around each penetrant such that putty extends approximately 1/2 in. (13 mm) beyond both surfaces of wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty.

   3M COMPANY – MPS-2+

   B. Fill Void or Cavity Material* – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between penetrants and periphery of opening and, installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

   3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 8 in. (203 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 2 in. (0 mm to max 51 mm) Space between penetrants to be min 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:
   
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 3 in. (76 mm) diam (or smaller) cast or ductile iron pipe.
   
   C. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) steel conduit or steel electrical metallic tubing.
   
   D. **Copper Tubing** – Nom 2 in. (51 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 2 in. (51 mm) diam (or smaller) Regular (or heavier) copper pipe.
   
   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:
   
   1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
      
      **OMEGA FLEX INC.**
   
   2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
      
      **TITEFLEX CORP, A BUNDY CO.**
   
   3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
      
      **WARD MFG INC.**

3. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to penetrant/wall interface at point contact location on both sides of wall.

   **3M COMPANY** – CP 25WB+; IC 15WB+ caulk or FB-3000 WT sealant.

Copyright © 2010 Underwriters Laboratories Inc.*
1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max size of opening to be 182 in.² (1174 cm²) with a max dimension of 45-1/2 in. (1156 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One or more metallic pipes or conduits installed within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 2 in. (0 mm to max 51 mm). Space between penetrants to be min 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) rigid steel conduit or steel electrical metallic tubing.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 5 in. (127 mm) thickness of min 4 pcf (64 kg/m³) mineral-wool batt insulation firmly packed into opening. Packing material to be recessed from both sides of wall assembly to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to penetrant/wall interface at point contact location on both sides of wall.

   **3M COMPANY** – CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.

   *Bearing the UL Classification Marking

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 12 in. (305 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One metallic pipe, conduit or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (0 mm) (point contact) to max 3-1/2 in. (89 mm). The penetrant may be installed at an angle not greater than 45 degrees from perpendicular. Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to concrete/penetrant interface at point contact location on both sides of wall.

   **3M COMPANY** – CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of opening to be min 1/2 in. (13 mm) to max 4 in. (102 mm) greater than outside diam of through-penetrant. See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One metallic pipe, conduit or tubing centered within opening. Annular space between penetrant and periphery of opening to be min 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 6 in. (152 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.
   D. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – **Sealant** – Min 5/8 in. (16 mm) thickness of sealant applied within annulus, flush with both surfaces of wall. **3M COMPANY** – FB-1000 NS

*Bearing the UL Classification Marking

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 5-1/2 in. (140 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** – One metallic pipe to be installed eccentrically or concentrically within the firestop system. Pipe to be rigidly supported on both sides of the wall assembly. The following types and sizes of metallic pipes may be used:
   - **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   - **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Compression Coupling** – Metallic pipes to be secured together with compression type pipe coupling with elastomeric gasket and a stainless steel jacket with stainless steel band clamps. Coupling to be installed partially within opening with min 1/2 in. (13 mm) of coupling protruding from wall. The annular space between the pipe or coupling and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm).

4. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with each surface of the wall assembly. Where annular space ranges from point contact to 1/4 in. (6 mm) wide a min 1/2 in. (13 mm) diam bead of fill material is to be applied at the coupling/wall or pipe/wall interface on both sides of wall. An additional min 1/8 in. (3.2 mm) diam bead of fill material is to be applied at the end of the compression coupling at the coupling/pipe interface where the coupling extends outside of the wall.

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 12-3/4 in. (324 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through-Penetrant** – One metallic pipe, conduit or tubing installed within the firestop system. The through penetrant to be installed with continuous point contact. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   
   A. **Steel Pipe** – Nom 12 in. (305 mm) (diam (or smaller) Schedule 10 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 12 in. (305 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe or Class 50 (or heavier) ductile iron pressure pipe.
   
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) galv steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – **Caulk** – Bead of fill material lapping min 1 in. (25 mm) onto concrete and min 1/2 in. (13 mm) onto penetrant around outer circumference of through penetrant on both surfaces of wall assembly.

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max height of opening is 6 in. (152 mm). Max width of opening is 36 in. (914 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – Multiple tubes, pipes or conduits installed in single layer array within the firestop system. The annular space between the penetrants and the edges of the opening shall be min 0 in. (point contact) to max 2 in. (51 mm). The separation between penetrants to be min 1-1/4 in. (32 mm) to max 2 in. (51 mm). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) rigid steel conduit or steel electrical metallic tubing (EMT).
   C. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Forming Material** – (Optional, Not Shown) – Foam backer rod, mineral wool batt insulation or glass fiber insulation packed into opening and recessed min 1-1/4 in. (32 mm) from each surface of the wall to accommodate fill material.
   B. **Fill Void or Cavity Materials* – Sealant** – Min 1-1/4 in. (32 mm) thickness of fill material installed to completely fill annular space between penetrants and gypsum board, flush with each surface of wall. Min 1/4 in. diam bead of fill material applied to the penetrant/wall interface at the point contact locations on both sides of the wall.

1. **Wall Assembly** — Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified solid core **Concrete Blocks**. Max area of opening in the wall is 720 in² (4645 cm²) with a max dimension of 30 in. (762 mm).

See **Concrete Blocks (CAZT)** in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Penetrants** — One or more penetrants may be installed within the through opening. The space between penetrants shall be min 1 in. (25 mm). The space between penetrants and periphery of opening shall be min 0 in. (point contact). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic penetrants may be used:

   A. **Tubing** — Nom 6 in. (152 mm) diam (or smaller) electrical metallic tubing (EMT). A maximum of one tube within the opening shall exceed nom 4 in. (102 mm) diam.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** — **Intumescent Sheet** — Rigid aluminum foil-faced sheet with galv sheet steel backer applied over opening at each side of wall. Sheets cut to tightly-follow the contours of the individual metallic penetrants. Sheets cut to lap a min of 2 in. (51 mm) on the wall on all sides of the opening on both sides of the wall. Prior to installation, a min 1/2 in. (13 mm) diam bead of putty (Item 3B) shall be applied as a gasket approx 1 in. (25 mm) from and on all sides of the through opening. Sheet to be installed with the galv sheet steel backer exposed (aluminum foil facing against wall surface) and secured to wall with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel masonry anchors in conjunction with min 1/4 in. (6 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with one fastener in each corner. See Item 3C below for splicing of sheets.

5. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** — **Putty** — Min 1/2 in. (13 mm) diam bead of putty applied to edge of intumescent sheet at its interface with surface of wall around entire perimeter of through opening. In addition, min 1/2 in. (13 mm) bead of putty applied around periphery of each penetrant at its egress from the intumescent sheet on each side of wall.

3M COMPANY — Type CS-195+

B. **Fill, Void or Cavity Material** — **Putty** — Min 1/2 in. (13 mm) diam bead of putty applied to edge of intumescent sheet at its interface with surface of wall around entire perimeter of through opening. In addition, min 1/2 in. (13 mm) bead of putty applied around periphery of each penetrant at its egress from the intumescent sheet on each side of wall.

3M COMPANY — MP+ Stix putty

C. **Steel Cover Strip** — (Not Shown) - Intumescent sheets (Item 3A) may be spliced. Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (26 gauge) galv steel centered over entire length of each butted seam or slit made in the intumescent sheet. Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a min 1/4 in. (6 mm) diam bead of sealant or caulk (Item 3D). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

D. **Fill, Void or Cavity Materials** — **Caulk or Sealant (Not Shown)** — Used with Item 3C. Prior to installation of the steel strip (Item 3C), the seam or slit in the intumescent sheet shall be covered with a min 1/4 in. (6 mm) diam bead of sealant or caulk.

3M COMPANY — CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant

1. Wall Assembly – Min 5 in. (127 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 10-1/2 in. (267 mm)

See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. Steel Sleeve – (Optional) - Cylindrical sleeve fabricated from min 0.019 in. (0.49 mm) thick (28 gauge) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall or up to 2 in. (51 mm) longer than the thickness of wall such that, when installed, the ends of the sleeve will be flush with wall surface or project up to 1 in. (25 mm) beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the max 10-1/2 in. (254 mm) diam through opening, inserting the coil through the opening and releasing the coil to let it uncoil against both surfaces of the wall.

3. Through Penetrants – One metallic pipe, tubing or conduit installed within the firestop system. Penetrant to be rigidly supported on both sides of wall assembly. Annular space between the penetrant and sleeve shall be min 0 in. (0 mm point contact) to max 2 in. (51 mm). The following types of metallic pipes or conduits may be used:

   A. Steel Pipe – Nom 8 in. (203 mm) schedule 5 (or heavier) steel pipe.
   B. Iron Pipe – Nom 8 in. (203 mm) cast or ductile iron pipe.
   C. Copper Tubing – Nom 4 in. (102 mm) Type L (or heavier) copper tubing.
   D. Copper Pipe – Nom 4 in. (102 mm) Regular (or heavier) copper pipe.
   E. Conduit – Nom 4 in. (102 mm) (or smaller) steel electrical metallic tubing or nom 6 in. (152 mm) (or smaller) rigid steel conduit.

4. Firestop System – The firestop system shall consist of the following:

   A. Packing Material – Min 4-3/8 in. (111 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from either or both surfaces of wall to accommodate the required thickness of fill material.

   B. Fill, Void or Cavity Materials*-Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with either or both surfaces of wall assembly.

   3M COMPANY – IC 15WB+, CP-25 WB+ caulk or FB-3000 WT sealant

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

1. **Wall Assembly** – Min 6 in. (152 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of opening to be 1/2 in. (13 mm) to 1 in. (25 mm) larger than outside diam of through penetrant (Item 3). Max diam of opening is 2-1/4 in. (57 mm).

   See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Pull or Junction Box+** – Min 16 ga steel pull or junction box mounted flush with or max 1/4 in. (6 mm) from surface of wall.

   See Junction and Pull Boxes (BGUZ) category in the Electrical Construction Material Directory for names of manufacturers.

3. **Conduit** – One nom 1 in. (25 mm) diam or (smaller) steel conduit or steel electrical metallic tubing to be installed either concentrically or eccentrically within the firestop system. The annular space shall be min 0 in. (point contact) to max 1 in. (25 mm). Conduit or EMT to be secured to back surface of pull or junction box with steel connector and rigidly supported on both sides of wall assembly.

4. **Fill, Void or Cavity Material* – Sealant** – Min 5/8 in. (16 mm) thickness of sealant applied within the annulus, flush with surface of wall opposite the pull or junction box. When Putty is used, the min thickness of fill material within the annulus shall be 1 in. (25 mm). In addition, a min 1/2 in. (13 mm) diam bead of fill material shall be applied at the point contact location between the conduit and wall. A min 1/2 in. (13 mm) diam bead of fill material shall be applied around the entire perimeter of the pull or junction box at its interface with the wall surface. The fill material shall lap min 1/2 in. (13 mm) onto both the wall and the sides of the pull or junction box.

**3M COMPANY 3M FIRE PROTECTION PRODUCTS** – FD 150+ Sealant, IC 15 WB+ Caulk, CP 25WB+ Caulk, 1000 NS Sealant or FB-3000 WT Sealant or 3M Fire Barrier Moldable Putty Stix MP+

1. **Wall Assembly** – Min 6 in. (152 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified solid filled Concrete Blocks*. Maximum diam of opening is 11 in. (279 mm).

See [Concrete Blocks (CAZT)](http://3M.com/firestop) in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Sleeve** – (Optional) - Cylindrical sleeve fabricated from min No. 30 gauge galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of the sleeve to be equal to the thickness of the wall. The ends of the steel sleeve shall be flush with each surface of the wall.

3. **Through Penetrant** – One metallic pipe, tube or conduit installed concentrically or eccentrically within the firestop system. The annular space between the pipe, tube or conduit and the periphery of the sleeved opening to be min 0 in. (0 mm, point contact) to max 2-3/8 in. (60 mm). Pipe, tube or conduit to be rigidly supported on both sides of wall assembly. One of the following types and sizes of pipe, tube or conduit may be used:

   - **A. Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   - **B. Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.
   - **C. Conduit** – Nom 4 in. (102 mm) diam (or smaller) rigid steel conduit, steel electrical metallic tubing (EMT) or flexible steel conduit.
   - **D. Copper Pipe or Tube** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe or Type M (or heavier) copper tube.

4. **Firestop System** – The firestop system consist of the following items:

   - **A. Packing Material** – A. Packing Material — Min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into sleeve or opening as a permanent form. Packing material to extend throughout thickness of wall except for a 5/8 in. (16 mm) deep recess on one side of wall to accommodate the fill material.
   - **B. Fill Void or Cavity Materials* – Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within sleeve or opening, flush with surface of wall. At the point contact location, a min 3/8 in. (10 mm) diam bead of fill material shall be applied at the penetrant/opening interface.

---

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

3M™ Fire Barrier Duct Wrap 615  
3M™ Fire Barrier Duct Wrap 615+ | Max 10” in. steel, max 10” iron, max 4” copper pipe, max 4” copper tubing, max 4” copper tubing. U300 or U400 series walls. Max diameter of opening 12-3/4” in. Point contact to 2” in. annular space. Concentric/ eccentric installation. 3M Fire Barrier Duct Wrap 20A or 615 or 615+ to extend min. 24 in. from each surface of wall assembly. Also known as WL1323. |
| W-L-1340      | 1, 2       | 3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Sealant IC 15WB+ | 8” steel, 8” iron, 4” EMT, 6” rigid steel conduit, 4” copper pipe or tubing. Max opening 12”. Concentric or eccentric installation. Angle of installation up to 45 degrees from perpendicular. Annular point contact to max 3-1/2”. 1 & 2 hr. F. Also known as WL1340. |
| W-L-1341      | 1, 2       | 3M™ Fire Barrier Water Tight Sealant 1000 NS | 6” steel, 6” iron, 4” EMT, 6” rigid steel conduit, 3” copper pipe or tubing. Diameter of opening min 1/2” to max 4” greater than outside diam of penetrant. Penetrant centered. Annular min 1/4” to max 2”. 1 & 2 hr F. Also known as WL1341. |
| W-L-1353      | 1, 2       | 3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Sealant IC 15WB+ | 2” steel, 2” iron, 2” copper pipe, 2” copper tubing penetrates one side of wall. Penetrant connected to metal tee for closed or vented systems. Point contact to max 1” annular. 1 & 2 Hour F Rating. Also known as WL1353. |
| W-L-1391      | 1, 2, 3, 4 | 3M™ Fire Barrier Pass-Through Products  
3M™ Fire Barrier Water Tight Sealant 3000 WT  
3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Sealant IC 15WB+  
3M™ Fire Barrier Moldable Putty Stix MP+ | Square device: max area 98-1/2 sq. in. w/ max dimension of 12-1/6 in. Round device: max diam of opening 4-1/2 in. One or more penetrants through each device w/ concentric or eccentric installation. Max 3 in. steel, max 3 in. iron, max 3 in. copper tubing, max 3 in. copper pipe, max 3 in. EMT, max 1-4” in. flexible metal piping. Max 6 square devices ganged or 1 round 1 and 2 hour F. Also known as WL1391. |
| W-L-1413      | 1, 2       | 3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Water Tight Sealant 3000 WT | Max 8” in. steel, max 8” in. iron, max 6” conduit, max 4” EMT, max 6” copper tubing, max 6” copper pipe. Max diam of opening 10 in. U400 or V400 series gypsum shaft wall assembly. Concentric or eccentric installation. Point contact to max 2 in. annular, 1 and 2 hour F rating. Caulk only system. Also known as WL1413. |
| W-L-1414      | 1, 2       | 3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Water Tight Sealant 3000 WT | Max 3” steel, max 3” iron, max 3” conduit, max 3” EMT, max 3” copper tubing, max 3” copper pipe, max 1” flexible metal piping. Max diam of opening 4-1/2 in. U400 or V400 series gypsum shaft wall assembly. Multiple penetrants. Concentric or eccentric installation. Point contact to max 2 in. annular. 1 and 2 hour F rating. Also known as WL1414. |
| W-L-1426      | 1, 2       | 3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Water Tight Sealant 3000 WT  
3M™ Fire Barrier Sealant IC 15WB+ | U300, U400 or V400 wall. Max 4” steel, max 4” cast iron, max 4” ductile iron. Concentric or eccentric installation. Max diam of opening 5-1/2 in. Compression coupling installed partially in opening with min 1/2” in. protruding. Point contact to max 1/2” in. annular space. Caulk only system. 1 & 2 hour F. Also known as WL1426. |
| W-L-1450      | 1, 2       | 3M™ Fire Barrier Sealant IC 15WB+  
3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Water Tight Sealant 3000 WT | Max 12” steel, max 12” iron, max 6” steel conduit, max 4” EMT, max 6” copper tubing, max 6” copper pipe. Min 6” Gypsum wall. Max diam of opening 12-3/4 in. Continuous point contact only. 2 hour F rating. Also known as WL1450. |

</table>
1. **Wall Assembly** – The 1, 2, 3 or 4 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs (max 2 hr fire rated assemblies) or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Nom 1/2 or 5/8 in. (13 or 16 mm) thick, 4 ft. (122 cm) wide with square or tapered edges. The gypsum wallboard type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 26 in. (660 mm).

2. **Through Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 24 in. (610 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. (305 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:
      1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
System No. W-L-1001 continued

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8, 1-1/4, 1-7/8 and 2-1/2 in. (16, 32, 48 and 64 mm) thickness of caulk for 1, 2, 3 and 4 hr rated assemblies, respectively, applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall. The hourly F Rating of the firestop system is dependent upon the hourly fire rating of the wall assembly in which it is installed, as shown in the following table. The hourly T Rating of the firestop system is dependent upon the type or size of the pipe or conduit and the hourly fire rating of the wall assembly in which it is installed, as tabulated below:

(51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-1/2 in. (89 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Nom 5/8 in. (16 mm) thick, 4 ft (1.2 m) wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400 or V400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 15 in. (381 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetration** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. The space between pipes, conduits or tubing and the steel sleeve (Item 3A) shall be min of 0 in. (point contact) to max 2-3/8 in. (60 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 12 in. (305 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. (305 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – Installed symmetrically on both sides of wall assembly. The details of the firestop system shall be as follows.
   A. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. thick (0.48 mm) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall plus 1 to 4 in. (25 to 102 mm) such that, when installed, the ends of the sleeve will project approx 1/2 to 2 in. (13 to 51 mm) beyond the surface of the wall on both sides of the wall assembly.
   Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers.
   B. **Packing Material** – Min 1 in. (25 mm) thickness of mineral wool batt insulation firmly packed into steel sleeve on both sides of the wall assembly as permanent forms. Packing material to be recessed min 1/2 in. (13 mm) from end of steel sleeve (flush with or recessed into gypsum board surface) on both sides of wall assembly.
   B1. **Packing Material** – (Not shown) – As an alternate to Item B, nom 1 in. (25 mm) thick polyethylene backer rod may be used. The backer rod is to be recessed within the steel sleeve a min of 1 in. (25 mm) from each surface of wall.
   C. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – When mineral wool batt insulation is used, caulk or sealant applied to fill the steel sleeve to a min depth of 1/2 in. (13 mm) on both sides of wall assembly. When backer rod is used, a min thickness of 1 in. (25 mm) of caulk or sealant is required flush with both sides of wall. A nom 1/4 in. (6 mm) diam continuous bead of caulk or sealant shall be applied around the circumference of the steel sleeve at its egress from the gypsum board layers on both sides of the wall assembly.

3M COMPANY – CP 25WB+, IC 15WB+ or FB-3000 WT

F Rating – 2 Hr
T Rating – 0 Hr
L Rating At Ambient – Less Than 1 CFM/sq ft
L Rating At 400 F – Less Than 1 CFM/sq ft

1. Wall Assembly – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 104 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC.
   B. Gypsum Board* – Two layers of nom 5/8 in. (16 mm) thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening is 14-1/4 in. (362 mm).

2. Through Penetrants – One metallic pipe, conduit or tubing to be centered within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. Steel Pipe – Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.
   B. Steel Pipe – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.
   C. Conduit – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or steel conduit. A nom annular space of 3/4 in. (19 mm) is required with the firestop system.
   D. Copper Tubing – Nom 2 in. (51 mm) diam (or smaller) Type L (or heavier) copper tubing. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.

3. Firestop System – The firestop system shall consist of the following:
   A. Packing Material – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. Fill, Void or Cavity Material* – Sealant – Min 1 in. (25 mm) thickness of fill material applied within the annulus on both surfaces of wall. Additional fill material to be installed such that a min 1/4 in. (6 mm) crown is formed around the penetrating item.

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC. When steel studs are used and the diam of opening exceeds the width of stud cavity, the opening shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end. The framed opening in the wall shall be 4 to 6 in. (102 to 152 mm) wider and 4 to 6 in. (102 to 152 mm) higher than the diam of the penetrating item such that, when the penetrating item is centered in the opening, a 2 to 3 in. (51 to 76 mm) clearance is present between the penetrating item and the framing in all four sides.
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening is 14-1/2 in. (368 mm) for wood stud walls and 25-1/2 in. (648 mm) for steel stud walls.

2. **Through Penetrants** – One metallic pipe, conduit of tubing to be centered within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.
   B. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or steel conduit. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing. A nom annular space of 3/4 in. (19 mm) is required within the firestop system.

3. **Fill, Void or Cavity Material** – **Sealant** – Min 1-1/4 in. (32 mm) thickness of fill material applied within the annulus on both surfaces of wall. Additional fill material to be installed such that a min 1/4 in. (6 mm) crown is formed around the penetrating item.

1. **Wall Assembly** – The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in deep channels spaced max 24 in. OC.

   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard as specified in the individual Wall or Partition Design. Max diam of through openings cut in wallboard layers is 12 in. Max dimensions for rectangular opening is 12 in. by 9 in.

   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement coated nails as specified in the individual U300-Series design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual U400-Series design.

2. **Steel Sleeve** – No. 28 gauge galv sheet steel formed into max 12 in. diam or Max 12 in. by 9 in. sleeve with nom 2 in. overlap at seam. Length of sleeve to be approx 1 in. greater than overall thickness of wall assembly, such that, when installed, the ends of the sleeve will project approx 1/2 in. beyond the surface of the wall on both sides of the wall assembly. Max diam of circular through openings in gypsum wallboard layers on each side of wall assembly to be 12 in. Max dimensions for rectangular opening is 12 in. by 9 in. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard layers.

3. **Steel Pipe or Conduit** – Nom 3 in. diam (or smaller) Schedule 10 (or heavier) steel pipe, steel conduit or steel electrical metallic tubing. Multiple pipes and/or conduit permitted in sleeved opening provided a min separation of 1/4 in. is maintained between pipes or conduits. Pipes and/or conduits to be rigidly supported on both sides of the wall assembly. The T Rating of the firestop system is dependent upon the max diam of the pipes or conduits, as tabulated below:

<table>

4. **Packing Material** – Min 1 in. thickness of rigid glass fiber insulation or mineral wool batt insulation firmly packed into steel sleeve on both sides of wall assembly as a permanent form. Packing material to be recessed min 5/8 in. from surface of wall on both sides of wall assembly.

5. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Applied to fill the steel sleeve to a min depth of 1 in. on both sides of wall assembly. A nom 1/4 in. diam continuous bead of caulk shall be applied around the circumference of the steel sleeve at its egress from the gypsum wallboard layers on both sides of the wall assembly.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

L Rating At 400 F – less than 1 CFM/sq ft

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   
   B. **Gypsum Board** – Nom 5/8 in. thick, 4 ft. wide with square or tapered edges. The gypsum wallboard type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Diam of circular through opening cut through gypsum wallboard on each side of wall assembly to be min 0 in. (point contact) to max 1 in. larger than outside diam of flexible metal conduit (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. from nearest stud in wall cavity.
   
   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design.

2. **Through Penetrating Product** – **Flexible Metal Conduit** – Nom 4 in. diam (or smaller) aluminum or steel **Flexible Metal Conduit**.
   
   Max one flexible metal conduit to be installed near center of circular opening in gypsum wallboard. Flexible metal conduit to be rigidly supported on both sides of wall assembly.

   **AFC CABLE SYSTEMS INC**

3. **Fill, Void or Cavity Material** – **Caulk** – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill opening in gypsum wallboard layers on each side of the wall assembly. A min 5/8 in. thickness of caulk is required for the 1 hr F Rating. A min 1-1/4 in. thickness of caulk is required for the 2 hr F Rating.

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 and U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 2-1/2 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – Two layers of nom 4 ft wide by 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition design. Max diam of opening is 3 in.

2. **Through Penetrating Product** – **Flexible Metal Conduit** – Nom 2 in. diam (or smaller) aluminum Flexible Metal Conduit+. Max one flexible metal conduit installed near center of through opening in gypsum wallboard layers. Diam of opening cut through both layers of gypsum wallboard on each side of wall to min 1/4 in. to max 1 in. larger than diam of flexible metal conduit. When nom 1-1/4 in. to 2 in. diam conduit is used, T Rating is 0 hr. **When nom 1/2 in. to 1 in. diam conduit is used, T Rating is 1-1/2 hr. When nom 3/8 in. diam conduit is used, T Rating is 2 hr.** Flexible metal conduit to be rigidly supported on both sides of wall assembly.

   **ANAMET INDUSTRIAL INC**

3. **Fill, Void or Cavity Material** – **Caulk** – Caulk fill material forced into annular space around entire circumference of flexible metal conduit to completely fill nom 1-1/4 in. deep annulus in gypsum wallboard layers on each side of the wall assembly.

   **3M COMPANY** – CP 25WB+

1. **Wall Assembly** – The fire-rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Steel Studs** – Steel studs to be min 3-5/8 in. (92 mm) deep and spaced max 24 in. (610 mm) OC. The opening in the wall to accommodate the pipes and/or conduits (Item 2) shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end. The framed opening in the wall shall be max 22-1/2 in. (572 mm) wide and 8 in. (203 mm) high.

   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design.

2. **Pipe or Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe, steel conduit, steel EMT or Type L (or heavier) copper tubing. Min clearance between pipe or conduit and edge of opening is 1 in. (25 mm). Pipes and conduits to be rigidly supported on both sides of wall assembly. When copper tubing is used, T Rating is 0 hr. When steel pipe is used, T Rating is 1 hr.

3. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. (51 mm) wide strips. When two metallic pipes or conduits are in close proximity or in contact with one another such that the intumescent sheet (Item 4) can not readily be cut to follow their contours, a nom 2 in. (51 mm) wide wrap strip shall be tightly-wrapped around the two pipes and secured with steel wire ties. Wrap strips to project approx 7/8 in. (22 mm) beyond each face of the intumescent sheet (Item 4) on each side of wall. When diam of circular cutout in intumescent sheet is max 1/4 in. (6 mm) larger than diam of metallic pipe or conduit, no wrap strip is required on pipe or conduit.

   **3M COMPANY** – FS-195+

4. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv sheet steel backer. Sheets cut to tightly follow the contours of the individual metallic pipe or conduit or the wrap strip (Item 3) on the grouped metallic pipes. Sheets cut to lap a min of 2 in. (51 mm) on the wall on all sides of the opening on both sides of the wall. Prior to installation, a min 1/4 in. (6 mm) diam bead of caulk (Item 6) shall be applied as a gasket approx 1 in. (25 mm) from and on all sides of the through opening. Sheet to be installed with the galv sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of butted seams or slits made to permit installation of the sheet around the pipes or conduits.

   **3M COMPANY** – CS-195+

5. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (26 gauge) galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 4). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulk (Item 6). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

6. **Fill, Void or Cavity Materials** – **Graphite Seal, Caulk, Sealant or Putty** – One layer of 1/2 in. x 1/16 in. (13 mm x 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Generous application of caulk to be applied around base of pipe or wrap strip at its egress from the intumescent sheet on each side of wall. An additional bead of caulk shall be applied to the exposed edge of each wrap strip layer. When two metallic pipes or conduits are grouped tightly together and enclosed in a single wrap strip, pieces of mineral wool batt packing material shall be installed inside wrap strip layer and a min 1 in. (25 mm) depth of caulk shall be installed to fill all interstices between the pipes within the confines of the wrap strip.

   **3M COMPANY** – E-FIS or Ultra GS seals, CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant, MP+ Stix putty.

*Bearing the UL Classification Marking

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.
   
   B. **Gypsum Board*** – Nom 5/8 in. thick, 4 ft. wide with square or tapered edges. The gypsum wallboard type, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of opening in gypsum wallboard is 6 in.

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. thick (No. 28 gauge) galv sheet steel and having a min 2 in. lap along the longitudinal seam. Length of sleeve to be equal to thickness of wall plus 1 in. such that, when installed, the ends of the sleeve will project approx 1/2 in. beyond each surface of the wall on both sides of the wall assembly. The diam of the openings cut in the gypsum wallboard on each side of the wall assembly to be 1 to 1-3/4 in. larger than outside diam of flexible metal conduit. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard. The sleeve is to be mechanically secured in the wall by cutting longitudinal slits in the ends of the sleeve to form tabs and by bending the tabs 90 degrees against the wallboard surface on each side of the wall.

3. **Through Penetrating Product** – Nom 4 in. diam (or smaller) aluminum or steel Flexible Metal Conduit*. Max one conduit per sleeved opening. Max annular space between conduit and inside of steel sleeve not to exceed 1-3/4 in. Min annular space between conduit and inside of steel sleeve is zero in. (point contact). Flexible metal conduit to be rigidly supported on both sides of wall assembly.

   **AFC CABLE SYSTEMS INC**

4. **Packing Material** – Polyethylene backer rod or min 1 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1/2 in. from wallboard surface on both sides of wall.

5. **Fill, Void or Cavity Material** – **Caulk** – Applied to fill the annular space around the flexible metal conduit. A min 1/2 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly. A min 1/2 in. diam bead of caulk shall be applied to the steel sleeve/wallboard interface around the entire perimeter of the sleeve on each side of the wall. A bead of caulk shall also be applied between the conduit and the steel sleeve at the point contact location on both sides of wall. The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hrs when installed in a 2 hr fire rated wall.

   **3M COMPANY** – CP 25WB+

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   
   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening cut in gypsum wallboard layers is 1-15/16 in.
   
   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design. Diam of circular through opening cut through both layers of gypsum wallboard on each side of wall assembly to be min 1/4 in. to max 11/16 in. larger than outside diam of flexible metal piping (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. from nearest stud in wall cavity.

2. **Through Penetrating Product** – **Flexible Metal Piping** – Nom 1 in. diam (or smaller) steel Flexible Metal Piping. Max one flexible metal piping to be installed near center of circular opening in gypsum wallboard layers. Flexible metal piping to be rigidly supported on both sides of wall assembly. Plastic covering on piping shall be removed for a distance of 2 ft on both sides of wall assembly.

   **TITEFLEX CORP, A BUNDY CO**

3. **Fill, Void or Cavity Material** – **Caulk** – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill nom 1-1/4 in. deep opening in gypsum wallboard layers on each side of the wall assembly.

   **3M COMPANY** – CP 25WB+

1. **Wall Assembly** – The 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide channels spaced max 24 in. OC.
   
   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard as specified in the individual U300 and U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 5-1/4 in. Diam of circular opening cut through both layers of gypsum wallboard on each side of wall assembly to be min 3/4 in. to max 1-1/2 in. larger than outside diam of pipe, conduit or tube. Side edge of through opening to be min 3 in. from nearest stud in wall cavity.

2. **Pipe or Conduit** – Nom 4 in. diam (or smaller) Schedule 10 (or heavier) steel pipe, nom 4 in. diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 4 in. diam (or smaller) Class 50 (or heavier) ductile iron pressure pipe, nom 4 in. diam (or smaller) steel conduit, nom 4 in. diam (or smaller) steel electrical metallic tubing or nom 2 in. diam Type L (or heavier) copper tubing. When steel or iron pipe, conduit or tube is used, T Rating of firestop system (Item 3) is 3/4 h. When copper tubing is used, T Rating of firestop system (Item 3) is 0 h. A max of one pipe, conduit or tube is permitted in the firestop system. Max annular space between pipe, conduit or tube and edge of opening is 3/4 in. Min annular space between pipe, conduit or tube and edge of opening is zero in. (point contact). Pipe, conduit or tube to be rigidly supported on both sides of wall assembly.

3. **Fill, Void or Cavity Material** – **Putty** – Putty fill material installed to fill annular space throughout thickness of gypsum wallboard layers on each side of wall assembly. A min 1/4 in. diam bead of putty is to be applied to the wall surface where the pipe, conduit or tube is installed in point contact with the edge of the through opening. Putty installed symmetrically on both sides of wall assembly.

**3M COMPANY** – MP+ Stix

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-1/2 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design. Diam of opening is 1-1/2 in. larger than the outside diam of pipe.

2. **Through Penetrant** – One metallic pipe, conduit or tubing to be centered within the firestop system. An annular space of 3/4 in. is required within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 12 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Conduit** – Nom 6 in. diam (or smaller) steel conduit.
   C. **Conduit** – Nom 4 in. diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Forming Material** – Nom 1 in. diam polyethylene backer rod friction fitted into opening as a permanent form. Forming material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.

4. **Fill, Void or Cavity Material** – Min 5/8 in. thickness of fill material applied within annulus, flush with both surfaces of wall assembly.

3M COMPANY – FB-2000+

1. **Wall Assembly** – The fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max diam of opening cut in gypsum board layers is 3-9/16 in. (90 mm).
   
   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement-coated nails as specified in the individual Wall and Partition Design. When steel channel stud framing is employed, gypsum board attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall and Partition Design.

   Diam of circular through opening cut through both layers of gypsum board on each side of wall assembly to be min 1/4 in. (6 mm) to max 11/16 in. (17 mm) larger than outside diam of flexible metal piping (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. (76 mm) from nearest stud in wall cavity.

2. **Through-Penetrating Product** – **Flexible Metal Piping** – Nom 2 in. (51 mm) diam (or smaller) steel flexible metal piping. Max one flexible metal piping to be installed near center of circular opening in gypsum board layers. Flexible metal piping to be rigidly supported on both sides of wall assembly.

   WARD MFG L L C – Wardflex or Wardflex II

3. **Fill, Void or Cavity Material** – **Caulk** – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill nom 1-1/4 in. (32 mm) deep opening in gypsum board layers on each side of the wall assembly.

   3M COMPANY – CP-25 WB+

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   
   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design. Diam of circular through opening cut through both layers of gypsum wallboard on each side of wall assembly to be min 1/4 in. to max 11/16 in. larger than outside diam of flexible metal piping (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. from nearest stud in wall cavity. Max diam of opening cut in gypsum wallboard layers is 3-1/8 in.
   
   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement-coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design.

2. **Through-Penetrating Product** – **Flexible Metal Piping** – Nom 2 in. diam (or smaller) steel Flexible Metal Piping. Max one flexible metal piping to be installed near center of circular opening in gypsum wallboard layers. Flexible metal piping to be rigidly supported on both sides of wall assembly. Plastic covering on piping shall be removed for a distance of 2 ft on both sides of wall assembly.

3. **Fill, Void, or Cavity Material** – **Caulk** – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill nom 1-1/4 in. deep opening in gypsum wallboard layers on each side of the wall assembly.

1. **Wall Assembly** – The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-1/2 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – One layer of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening is 11-1/2 in.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 6 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 6 in. diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 4 in. diam (or smaller) steel electrical metallic tubing or steel conduit.

3. **Pipe Covering** – Nom 2 in. thick hollow cylindrical heavy density glass fiber units with an all service jacket. Pipe covering to be min 12 in. long and installed on penetrant to extend a min of 3-5/8 in. beyond both sides of wall surface. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product. Min 18 gauge steel wire ties shall be tightly fastened around outside of pipe covering approximately 1 in. from each end of pipe covering. The annular space between the pipe covering and periphery of opening shall be min 0 in. (point contact) to max 7/8 in.

   See **Pipe and Equipment Covering – Materials** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. thickness of fill material applied within annulus, flush with each surface of wall. A min 1/4 in. diam bead of caulk shall be applied to the pipe covering/wallboard interface at the point contact location on both sides of wall.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-1/2 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening is max 1/2 in. larger than the outside diam of steel sleeve (Item 3A).

2. **Through Penetrants** – One 6 in. diam (or smaller) No. 11 MSG aluminum pipe (or heavier) to be centered within the firestop system. Pipe to be rigidly supported on both sides of wall assembly. The pipe may be installed at an angle not greater than 45 degrees from perpendicular. Through penetrant may contain the following beverage service lines:
   A. Max 12 nom 1/2 in. diam polyethylene tubes and max 2 nom 1/2 in. diam (or smaller) copper tubes, with the entire bundle insulated with nom 3/4 in. thick acrylonitrile butadiene/polyvinyl chloride (AB/PVC) insulation.
   B. Max 10 nom 3/8 in. diam polyolefin tubes, with the entire bundle insulated with a PVC jacket and nom 3/4 in. thick acrylonitrile butadiene/polyvinyl chloride (AB/PVC) insulation.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Metallic Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. thick (26 gauge) galv sheet steel and having a min 1 in. lap along the longitudinal seam. Sleeve to extend a min of 2 in. beyond both sides of the wall. The inside diam of the sleeve shall be larger than the outside diam of aluminum pipe or such that an annular space will be present between the steel sleeve and the pipe around the entire circumference of the pipe to accommodate the layer of wrap strip (Item 3B). The annular space between the outside of the wrap strip and the inside of the sleeve shall be min 0 in. to max 1/4 in. The annular space between the outside of the sleeve and the periphery of the opening shall be min 0 in. (point contact) to max 1/2 in.
   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. wide strips. One nom 2 in. wide strip tightly wrapped around aluminum pipe (foil side exposed) and slid into sleeve on both sides of wall such that the outer edges of wrap strip are flush with the outer edges of the sleeve. Wrap strip installed with seam butted. Wrap strip layers held in position using aluminum foil tape, steel wire tie, or equivalent. A min 1/2 in. wide stainless steel hose clamp shall be secured around the outside of the sleeve over the center of the wrap strip on both ends of the sleeve.
   C. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. thickness of caulk applied within the annulus between metallic sleeve and periphery of the opening, flush with both surfaces of wall assembly. At the point contact location between sleeve and gypsum wallboard, a min 1/2 in. diam bead of caulk shall be applied at the sleeve/wallboard interface on both surfaces of wall assembly. A min 1/4 in. bead of caulk shall also be applied over the outer edges of the wrap strips and within the annular space between the wrap strip and sleeve on both sides of wall.
   D. **Fill, Void or Cavity Materials** – **Putty** – Min 1 in. thickness of putty, packed into both ends of through penetrant where beverage lines enter and exit.

System No. W-L-1146
September 03, 2004
F Ratings – 1 and 2 Hr (See Item 1)
T Rating – 0 Hr

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. When steel studs are used and the diam of opening exceeds the width of stud cavity, the opening shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end. The framed opening in the wall shall be 4 in. to 6 in. (102 to 152 mm) wider and 4 in. to 6 in. (102 to 152 mm) higher than the diam of the penetrating item such that, when the penetrating item is centered in the opening, a 2 in. to 3 in. (51 mm to 76 mm) clearance is present between the penetrating item and the framing in all four sides.

   B. **Gypsum Board*** – The gypsum wallboard type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 26 in. (660 mm) for steel stud walls. Max diam of opening is 14-1/2 in. (368 mm) for wood stud walls.

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (point contact) to max 2 in. (0 mm to 51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 24 in. (610 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in (305 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.

   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in (102 mm) diam (or smaller) steel electrical metallic tubing

   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing

   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/wallboard interface at the point contact location on both sides of wall.

   3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant.

*Bearing the UL Classification Mark

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC. When steel studs are used and the diam of opening exceeds the width of stud cavity, the opening shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw attached to the steel studs at each end. The framed opening in the wall shall be 4 to 6 in. (102 to 152 mm) wider and 4 to 6 in. (102 to 152 mm) higher than the diam of the penetrating item such that, when the penetrating item is installed in the opening, a 2 to 3 in. (51 to 76 mm) clearance is present between the penetrating item and the framing in all four sides.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 25-1/2 in. (648 mm) for steel stud walls. Max diam of opening is 14-1/2 in. (368 mm) for wood stud walls.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through-Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space shall be min 0 in. (point contact) to max 1-1/2 in. (38 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types of pipe, conduit or tubing may be used:

   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.

   C. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

   D. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. diam (or smaller) steel conduit.

   E. **Steel Pipe** – Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   T Rating is 1/4 hr for Items A, D and E, 0 hr for Items B and C.

3. **Fill, Void or Cavity Material** – **Sealant** – Min 5/8 in. (16 mm) or 1-1/4 in. (32 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall for 1 or 2 hr walls, respectively.

   **3M COMPANY** – FB-1000 NS or FB-3000 WT

F Ratings – 1 and 2 Hr (See Item 1B)

T Rating – 0 Hr

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 1/8 in. (3.2 mm) Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type M (or heavier) copper tubing.
   B. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
   C. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   D. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or rigid steel conduit.
   E. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Min 1/2 in. (13 mm) diameter bead of caulk or putty applied continuously around the penetrant on the wall surfaces on both sides of the wall.

   **3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant, MP+ Stix putty.

Wall Assembly – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-1/2 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.

B. **Gypsum Board** – The gypsum wallboard type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 14 in.

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

Through Penetrant – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (point contact) to max 1-3/8 in. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

A. **Steel Pipe** – Nom 12 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.

B. **Iron Pipe** – Nom 12 in. diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.

C. **Conduit** – Nom 6 in. diam (or smaller) steel conduit or nom 4 in. diam (or smaller) steel electrical metallic tubing.

D. **Copper Tubing** – Nom 4 in. diam (or smaller) Type L (or heavier) copper tubing.

E. **Copper Pipe** – Nom 4 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill Void or Cavity Materials** – **Caulk** – Min 5/8 in. thickness of fill material applied within the annulus, flush with both surfaces of wall. Min 1/2 in. diam bead of caulk applied to the penetrant/wallboard interface at the point contact location on both sides of wall.

3M COMPANY – FireDam 150+

*Bearing the UL Classification Mark*
1. **Wall Assembly** - The 4 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing consist of min 20 gauge steel channel studs. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC. When opening size exceeds width of stud cavity additional framing members shall be installed between the vertical studs and screw attached at each end.
   B. **Batts and Blankets** – Min 3 in. thickness of min 4 pcf mineral wool batt insulation to be placed in the stud cavity.
   C. **Gypsum**\* **Board** – Two layers of nom 3/4 in. thick gypsum board, as specified in the individual Wall and Partition Design. Max size of opening is 25 in.

2. **Through Penetrants** – One metallic pipe, conduit or tubing installed either concentrically or eccentricaly within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (point contact) to max 1 in. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Conduit** – Nom 6 in. diam (or smaller) steel conduit or nom 4 in. diam (or smaller) steel electrical metallic tubing.
   B. **Copper Tubing** – Nom 6 in. diam (or smaller) Type L (or heavier) copper tubing.
   C. **Copper Pipe** – Nom 6 in. diam (or smaller) Regular (or heavier) copper pipe.
   D. **Steel Pipe** – Nom 24 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   E. **Iron Pipe** – Nom 24 in. diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 24 in. diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.

3. **Fill, Void or Cavity Materials**\* – **Caulk or Sealant** – Min thickness of 3/4 in. of fill material applied within annulus, flush with both surfaces of wall assembly. Min 1/2 in. diam bead of caulk applied to the penetrant/wallboard interface at point contact location on both surfaces of wall assembly.

UL System No. W-L-1228
XHEZ - Through-penetration Firestop Systems
XHEZ7 - Through-penetration Firestop Systems Certified for Canada

June 28, 2010

F Rating — 1 and 2 Hr (See Item 1)
T Ratings — 0, 1/2 and 1 Hr (See Item 3)
L Rating At Ambient — Less Than 1 CFM/sq ft
L Rating At 400 F — 2 CFM/sq ft

1. **Wall Assembly** — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing shall consist of min 3-5/8 in. (92 mm) wide steel channel studs spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** — Thickness, type, number of layers and fasteners shall be as specified in the individual U400 or V400 series Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 67-1/2 sq. in. (435 sq cm) with max dimension of 22-1/2 in. (572 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through-Penetrant** — One or more nom 2 in. (51 mm) diam (or smaller) rigid steel conduit or electrical metallic tubing (EMT) installed either concentrically or eccentrically within the firestop system. The annular space between conduits or tubing and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1-1/4 in. (32 mm). The space between conduits or tubing shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Conduit or tubing to be rigidly supported on both sides of wall assembly.

3. **Fill, Void or Cavity Material** — Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/gypsum board interface at the point contact location on both sides of wall.

   The hourly T Rating of the firestop system is 0 Hr when used in 1 Hr rated assemblies. The T Rating for 2 Hr rated assemblies is 1/2 Hr for FireDam 150+ and IC 15WB and is 1 Hr for CP-25WB+ and FB-3000 WT.

   **3M COMPANY** — CP 25WB+, FireDam 150+, IC 15WB+ caulk or FB-3000 WT sealant

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 225 sq in. (0.15 m²) with a max dimension of 22-1/2 in. (572 mm).

   The hourly F and FH Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings for the firestop system are 0 and 1/2 hr for 1 and 2 hr rated assemblies, respectively.

2. **Through-Penetrant** – One or more nom 4 in. (102 mm) diam (or smaller) rigid steel conduit or electrical metallic tubing (EMT) installed either concentrically or eccentrically within the firestop system. The annular space between conduits or tubing and periphery of opening shall be min 0 in. (0 mm) (point contact) to max 4 in. (102 mm). The horizontal space between conduits or tubing shall be min 1/4 in. (6 mm) to max 4 in. (102 mm). The vertical space between conduits or tubing shall be min 1-1/2 in. (38 mm) to max 4 in. (102 mm). Conduit or tubing to be rigidly supported on both sides of wall assembly.

3. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Fill Void or Cavity Material** – *Caulk, Sealant or Putty* – Min 1/2 in. (13 mm) thickness of caulk or putty formed to a min 1 in. (25 mm) width and applied within annulus at all corners of opening and extending a min 1 in. (25 mm) in both directions from each corner, flush with both surfaces of wall. Min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of caulk or putty wrapped applied around each penetrant such that caulk or putty extends approximately 1/2 in. (51 mm) beyond both surfaces of wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of caulk or putty.

   **3M COMPANY** – MPS-2+ or CP 25 WB+ or FB-3000 WT

   B. **Fill Void or Cavity Material** – *Pillows* – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between penetrants and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

   **3M COMPANY** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

*Bearing the UL Classification Mark

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 8 in. (203 mm)

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 1/4 Hr for 1 and 2 Hr rated assemblies, respectively.

2. **Through Penetrants** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 2 in. (0 mm to max 51 mm). Space between penetrants to be min 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 3 in. (76 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) steel conduit or steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 2 in. (51 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 2 in. (51 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:
      1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **OMEGA FLEX INC.**
      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **TITEFLEX CORP, A BUNDY CO**
      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **WARD MFG INC.**

3. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.
   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

*Bearing the UL Classification Marking

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nominally 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400 or V400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 10-5/8 in. (270 mm).

   C. **Steel Sleeve** – (Optional, Not Shown) - Cylindrical sleeve fabricated from min 0.019 in. thick (0.48 mm) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard layers.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 1/4 Hr for 1 and 2 Hr rated assemblies, respectively.

2. **Through Penetrants** – One metallic pipe, conduit, tubing or flexible metal pipe installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (0 mm point contact) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.

   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

   F. **Through Penetrating Product*** – **Flexible Metal Piping** – The following types of steel flexible metal gas piping may be used:

      1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

      **OMEGA FLEX INC**

      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

      **GASTITE, DIV OF TITEFLEX**

      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

      **WARD MFG INC**

3. **Fill, Void or Cavity Material*** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

System No. W-L-1299
May 23, 2005
F Ratings – 1 & 2 Hr (See Item 1)
T Rating – 0 Hr

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of min 3-1/2 in. (89 mm) wide steel channel studs spaced max 24 in. (610 mm) OC. Additional min 3-1/2 in. (89 mm) wide steel studs shall be used to completely frame opening.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U400 Series Design in the UL Fire Resistance Directory. Max size of opening to be 182 in.² (1174 cm²) with a max dimension of 45-1/2 in. (1156 mm). All vertical studs in opening to remain intact.

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One or more metallic pipes or conduits installed within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 2 in. (0 mm to max 51 mm). Space between penetrants to be min 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) rigid steel conduit or steel electrical metallic tubing.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3-3/4 in. or 5 in. (95 mm or 127 mm) thickness of min 4 pcf (64 kg/m³) mineral-wool batt insulation firmly packed into opening for 1 and 2 hr rated assemblies, respectively. Packing material to be recessed from both sides of wall assembly to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.

3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

*Bearing the UL Classification Marking

1. **Wall Assembly** – The 2 hr fire-rated shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Steel Studs** – C-H shaped studs, 2-1/2 in. (64 mm) wide by 1-1/2 in. (38 mm) deep, spaced 24 in. (610 mm) OC.

   B. **Gypsum Board** – 1 in. (25 mm) thick gypsum board liner panels, supplied in nom 24 in. (610 mm) widths as specified in the individual Wall and Partition Design. Max diam of opening is 10-1/2 in. (267 mm).

   C. **Gypsum Board** – Two layers of 5/8 in. (16 mm) thick gypsum board as specified in the individual Wall and Partition Design. Max diam of opening is 10-1/2 in. (267 mm).

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. (0.49 mm) thick (28 gauge) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall or up to 2 in. (51 mm) longer than the thickness of wall such that, when installed, the ends of the sleeve will be flush with wall surface or project up to 1 in. (25 mm) beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the max 10-1/2 in. (267 mm) diam through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers.

3. **Through Penetrants** – One metallic pipe, tubing or conduit installed within the firestop system. Penetrant to be rigidly supported on both sides of wall assembly. Annular space between the penetrant and sleeve shall be min 0 in. (0 mm point contact) to max 2 in. (51 mm). The following types of metallic pipes or conduits may be used:

   A. **Steel Pipe** – Nom 8 in. (203 mm) schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 8 in. (203 mm) cast or ductile iron pipe.

   C. **Copper Tubing** – Nom 4 in. (102 mm) Type L (or heavier) copper tubing.

   D. **Copper Pipe** – Nom 4 in. (102 mm) Regular (or heavier) copper pipe.

   E. **Conduit** – Nom 4 in. (102 mm) (or smaller) steel electrical metallic tubing or nom 6 in. (152 mm) (or smaller) rigid steel conduit.

4. **Firestop System** – The firestop system shall consist of the following:

   **A. Packing Material** – Min 4-1/8 in. (105 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from finished surface of wall (Item 1C) to accommodate the required thickness of fill material.

   **B. Fill, Void or Cavity Materials*-Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with finished surface of wall assembly.

   *3M COMPANY – IC 15WB+, CP-25 WB+ caulk or FB-3000 WT sealant

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

1. **Wall Assembly** – The 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features.
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max diam of opening is 12-3/4 in. (324 mm).

2. **Through-Penetrant** – One metallic pipe or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 10 in. (254 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   D. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
   The Hourly T Rating is 2 Hr for penetrants A and B. The Hourly T Rating is 1-1/4 Hr for penetrants C and D.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 5/8 in. (16 mm) thickness of caulk or putty applied within the annulus, flush with both surfaces of wall.
      3M COMPANY – CP 25WB+ caulk, MP+ putty or FB-3000 WT sealant
   B. **Duct Wrap Material** – Nom 2 in. (51 mm) thick duct wrap tightly wrapped around penetrant, butted to wall and extending 24 in. (610 mm) beyond both surfaces of wall. Longitudinal seams sealed with foil tape.
      3M COMPANY – FireBarrier Duct Wrap 20A, 615 or 615+

F Ratings – 1 and 2 Hr (See Item 1)
T Rating – 0 Hr

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 12 in. (305 mm).

   **The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.**

2. **Through Penetrants** – One metallic pipe, conduit or tubing installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 3-1/2 in. (0 mm to max 89 mm). The penetrant may be installed at an angle not greater than 45 degrees from perpendicular. Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.
   
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.
   
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Diam of opening to be min 1/2 in. (13 mm) to max 4 in. (102 mm) greater than outside diam of through-penetrant.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One metallic pipe, conduit or tubing centered within opening. Annular space between penetrant and periphery of opening to be min 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 6 in. (152 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.
   D. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – Sealant – Min 5/8 in. (16 mm) thickness of sealant applied within annulus, flush with both surfaces of wall.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) (or larger) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 3-1/2 in. (89 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Metallic Pipe** – Metallic pipe, tube or conduit installed within the stud cavity and connected to metallic tee for use in closed (process or supply) or vented (drain, waste or vent) piping systems. Pipe, tube or conduit penetrating wall assembly on one side of wall to be installed either concentrically or eccentrically with the annular space between the penetrant and the periphery of opening of min 0 in. (0 mm, point contact) to max 1 in. (25 mm). The following types of metallic pipes, tubes, conduits and tees may be used:

   A. **Steel Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 2 in. (51 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Copper Tubing** – Nom 2 in. (51 mm) diam (or smaller) Type L (or heavier) copper tubing.

   D. **Copper Pipe** – Nom 2 in. (51 mm) diam (or smaller) Regular (or heavier) copper pipe.

   E. **Conduit** – Nom 2 in. (51 mm) diam (or smaller) rigid steel conduit or electrical metallic steel tubing (EMT).

2A. **Conduit Body*** – (Not Shown) - When a steel conduit or EMT is used, nom 2 in. size (or smaller) steel conduit body with steel fittings as an alternate to the metallic tee. Refer to Conduit Fittings (DWTT) category in the UL Electrical Construction Directory.

3. **Fill, Void or Cavity Material*** – **Caulk** – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with surface of wall. At the point contact location between duct and wallboard, a min 1/2 in. (13 mm) diam bead of sealant shall be applied at the wallboard/duct interface on both surfaces of wall assembly.

   **3M COMPANY** – IC 15WB+ caulk, CP 25WB+ caulk or FB-3000 WT Sealant

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

System No. W-L-1391
May 23, 2011
F Ratings – 1, 2, 3 and 4 Hr (See Item 1)
T Rating – 0 Hr
L Rating At Ambient – 1 CFM/sq ft. (See Item 3B)
L Rating At 400 F – Less Than 1 CFM/sq ft. (See Item 3B)

1. **Wall Assembly** – The 1, 2, 3 or 4 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 98.5 in.² (635 cm²) with a max dimension of 12-1/8 in. (308 mm) for square devices. Max diam of opening is 2-1/4 in. (57 mm) for nom 2 in. (51 mm) round devices and 4-1/4 in. (108 mm) for nom 4 in. (102 mm) round devices.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** – One or more metallic pipe, tubing or conduit may be installed concentrically or eccentrically within each firestop device (_item_3A). Through penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of through penetrants may be used:

   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 3 in. (76 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tube.

   D. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.

   E. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) steel electric metallic tubing (EMT) or rigid steel conduit.

   F. **Through-Penetrating Product** – Flexible Metal Piping – Nom 1-1/4 in. (32 mm) diam (or smaller) steel flexible metal piping.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Firestop Device** – A max of six square firestop devices may be ganged together for 1 and 2 hr rated assemblies. A max of three square firestop devices may be ganged together for 3 and 4 hr rated assemblies. As an alternate, one round device may be centered within a round opening. Each device consists of a nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), a nom 4 by 4 by 10 in. (102 by 102 by 254 mm), a nom 2 in. (51 mm) diam by 10 in. (254 mm) or a nom 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. In nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), a nom 4 by 4 by 10 in. (102 by 102 by 254 mm), a nom 2 in. (51 mm) diam by 10 in. (254 mm) or a nom 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. In nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 mm) devices, the max nom diam of the through penetrant (item 2) shall not exceed 1-1/4 in. (32 mm). Firestop device(s) to be installed within opening with ends projecting an equal distance beyond each surface of wall assembly in accordance with the accompanying installation instructions. The annular space between device(s) and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1/8 in. (3.2 mm). Firestop device(s) secured in place by means of fill material (item 3B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of wall after installation of fill material, and secured together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the through penetrant and installed flush with each end of device on both sides of wall assembly. The foam plug in one or both ends of the device is optional except when L Rating is required (See item 3B).

   B. **Fill, Void or Cavity Materials** – Putty or Caulk – Min 1/8 in. (3 mm) bead of fill material applied at interface of gypsum board and firestop devices immediately prior to the installation of the mounting flanges. If three or less cable transits (item 3A) are ganged together, the fill material may be optional. Also as an option, foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device. L Rating applies only when fill material is applied at interface of gypsum board and device(s) prior to mounting flanges and with both ends of firestop device(s) filled with nominal 1/8 in. (3.2 mm) of Moldable Putty+.  

   3M COMPANY – 3M Fire Barrier Pass-Through Device

   3M COMPANY – Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall incorporate the following construction features:
   A. **Steel Studs** – “C-H” or “C-T” shaped studs, min 2-1/2 in. (64 mm) wide by 1-1/2 in. (38 mm) deep, fabricated from min No. 25 gauge (0.6 mm thick) galv steel, spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board*** – 1 in. (25 mm) thick, 24 in. (610 mm) wide gypsum liner panels installed vertically. Max diam of circular cutout in gypsum liner panel is 10 in. (254 mm).
   C. **Gypsum Board*** – 1/2 in. or 5/8 in. (13 or 16 mm) thick, 48 in. (1.2 m) wide gypsum boards. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of circular cutout in gypsum board is 10 in. (254 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (0 mm, point contact) to max 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 8 in. (203 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 1 in. (25 mm) thickness of fill material applied within the gypsum board liner panel flush with the faces of the liner panel. Min 5/8 in. (16 mm) thickness of fill material applied within the gypsum board annulus, flush with the finished side of the wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/gypsum board interface at the point contact location on the finished side of the wall.

   **3M COMPANY** – CP25WB+ Caulk or FB-3000 WT Sealant

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall incorporate the following construction features:
   
   A. **Steel Studs** – “C-H” or “C-T” shaped studs, min 2-1/2 in. (64 mm) wide by 1-1/2 in. (38 mm) deep, fabricated from min No. 25 gauge (0.6 mm thick) galv steel, spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – 1 in. (25 mm) thick, 24 in. (610 mm) wide gypsum liner panels installed vertically. Max diam of circular cutout in gypsum liner panel is 4-1/2 in. (114 mm).
   
   C. **Gypsum Board** – 1/2 in. or 5/8 in. (13 or 16 mm) thick, 48 in. (1.2 m) wide gypsum boards. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of circular cutout in gypsum board is 4-1/2 in. (114 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One or more metallic pipes, conduits or tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 1/4 in. (6 mm) to max 1 in. (25 mm). Space between penetrants shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 3 in. (76 mm) diam (or smaller) cast or ductile iron pipe.
   
   C. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) steel conduit or steel electrical metallic tubing.
   
   D. **Copper Tubing** – Nom 2 in. (51 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 2 in. (51 mm) diam (or smaller) Regular (or heavier) copper pipe.
   
   F. **Through Penetrating Product** – **Flexible Metal Piping** – Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

   OMEGA FLEX INC
   GASTITE, DIV OF TITEFLEX
   WARD MFG INC

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1 in. (25 mm) thickness of fill material applied within the gypsum board liner panel flush with the faces of the liner panel. Min 5/8 in. (16 mm) thickness of fill material applied within the gypsum board annulus, flush with the finished side of the wall.

   3M COMPANY – CP 25WB+ Caulk or FB-3000 WT Sealant

1. **Wall Assembly** – The 1 or 2 h fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as specified in the individual Wall and Partition Design. Max diam of opening is 5-1/2 in. (140 mm).
   
   The hourly F Rating of the firestop system is equal to the hourly assembly rating of the wall assembly in which it is installed.

2. **Through Penetrant** – One metallic pipe to be installed eccentrically or concentrically within the firestop system. Pipe to be rigidly supported on both sides of the wall assembly. The following types and sizes of metallic pipes may be used:
   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Compression Coupling** – Metallic pipes to be secured together with compression type pipe coupling with elastomeric gasket and a stainless steel jacket with stainless steel band clamps. Coupling to be installed partially within opening with min 1/2 in. (13 mm) of coupling protruding from wall. The annular space between the pipe or coupling and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm).

4. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with each surface of the wall assembly. Where annular space ranges from point contact to 1/4 in. (6 mm) wide a min 1/2 in. (13 mm) diam bead of fill material is to be applied at gypsum board/coupling or gypsum board/pipe interface on both sides of wall. An additional min 1/8 in. (3.2 mm) diam bead of fill material is to be applied at the end of the compression coupling at the coupling/pipe interface where the coupling extends outside of the wall.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400 or V400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 12-3/4 in. (324 mm).
   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through-Penetrant** – One metallic pipe, conduit or tubing installed within the firestop system. The through penetrant to be installed with continuous point contact. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 12 in. (305 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) galv steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – **Caulk** – Bead of fill material lapping min 1 in. (25 mm) onto gypsum board and min 1/2 in. (13 mm) onto penetrant around outer circumference of through penetrant on both surfaces of wall assembly.

**3M COMPANY**

3M FIRE PROTECTION PRODUCTS – CP 25WB+ Caulk, IC 15WB+ Caulk, FB-3000 WT Sealant

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400 and V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall incorporate the following construction features:
   
   A. **Steel Studs** – “C-H”, “C-T” or “I” shaped studs, min 2-1/2 in. (64 mm) wide by 1-1/2 in. (38 mm) deep, fabricated from min No. 25 gauge galv steel, spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – 1 in. (25 mm) thick, 24 in. (610 mm) wide gypsum liner panels installed vertically. Circular cutout in gypsum liner panel to be min 1 in. (25 mm) to max 2-1/2 in. (64 mm) larger than outside diam of through penetrant (Item 3). Max diam of circular cutout in gypsum liner panel is 11 in. (279 mm).
   
   C. **Gypsum Board** – 1/2 in. (13 mm) or 5/8 in. (16 mm) thick, 48 in. (1220 mm) wide gypsum boards. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Circular cutout in gypsum board to align with and be equal in diam to the circular cutout in the liner panel (Item 1B).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Metallic Sleeve** – Cylindrical sleeve fabricated from min No. 30 gauge galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of the sleeve to be equal to the thickness of the wall. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers. The ends of the steel sleeve shall be flush with each surface of the wall.

3. **Through Penetrant** – One metallic pipe, tube or conduit installed concentrically or eccentrically within the firestop system. The annular space between the pipe, tube or conduit and the periphery of the sleeved opening to be min 0 in. (0 mm, point contact) to max 2-3/8 in. (60 mm). Pipe, tube or conduit to be rigidly supported on both sides of wall assembly. One of the following types and sizes of pipe, tube or conduit may be used:
   
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.
   
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) rigid steel conduit, steel electrical metallic tubing (EMT) or flexible steel conduit.
   
   D. **Copper Pipe or Tube** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe or Type M (or heavier) copper tube.

4. **Firestop System** – The firestop system consist of the following items:
   
   A. **Packing Material** – Min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into sleeved opening as a permanent form. Packing material to extend throughout thickness of wall except for a 5/8 in. (16 mm) deep recess on the finished side of wall to accommodate the fill material.
   
   B. **Fill Void or Cavity Materials** – **Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within sleeve, flush with finished surface of wall. At the point contact location, a min 3/8 in. (10 mm) diam bead of fill material shall be applied at the penetrant/sleeve interface.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – FB-3000 WT or FB-1000 NS Sealant

*Bearing the UL Classification Mark

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400, V400 or W400 Series Design in the UL Fire Resistance Directory. Max area of rectangular opening is 192 sq in. (0.12 m²) with max height dimension of 6 in. (152 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating of the firestop system is 0 Hr or 1/2 Hr when installed in 1 Hr or 2 Hr fire rated wall assembly, respectively.

2. **Through Penetrants** – A maximum of six metallic pipes, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between penetrant and periphery of opening shall be min 0 in. (point contact) to max 1-7/8 in. Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 4 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 4 in. diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 4 in. diam (or smaller) rigid steel conduit or steel electrical metallic tubing (EMT).

   D. **Copper Tubing** – Nom 4 in. diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** – Nom 4 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Gypsum Board** – Two-piece patch consisting of two layers of min 5/8 in. (16 mm) thick gypsum board cut to follow the contours of the penetrants with a nom 1/4 in. (6 mm) annulus around each penetrant. Patch to be sized to overlap wall opening min 2 in. (51 mm) on all sides and cut into two halves such that a horizontal seam traverses the opening to permit installation around the penetrants. Each layer of the patch to be individually installed and secured to underlying gypsum board with caulk (Item 3B) and with No. 10 by 1-1/4 in. (32 mm) long Type G laminating screws. Top and bottom half of each patch layer shall be tightly butted together. Laminating screws for each layer to be located 1 in. (25 mm) from patch edges and spaced max 6 in. (152 mm) OC around perimeter of patch.

   B. **Fill, Void or Cavity Materials** – Min 1/4 in. (6 mm) diam continuous bead of fill material applied beneath first layer of gypsum patch and between first and second layers of gypsum patch. Fill material bead located approx 1 in. (25 mm) from edges of patch. Additional fill material installed to fill all seams between patch sections and to fill the annular spaces around the individual penetrants flush with both surfaces of the gypsum board patch. An additional 5/8 in. (16 mm) crown bead of fill material shall be applied over the butted seam of the gypsum board patch and around the entire perimeter of each penetrant.

FTH Rating – 0 Hr

1. **Wall Assembly** – The 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400, V400 or W400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of min 3-1/2 in. (89 mm) wide steel studs spaced max 24 in. (610 mm) OC. If stud is removed within the area opening, the opening is to be completely framed with additional studs (not shown).
   B. **Gypsum Board** – Min two layers of 5/8 in. gypsum board attached to studs with fasteners, as specified in the individual U400, V400 or W400 Series design. Max height of opening is 6 in. (152 mm). Max width of opening is 36 in. (914 mm).

2. **Through Penetrants** – Multiple tubes, pipes or conduits installed in single layer array within the firestop system. The annular space between the penetrants and the edges of the opening shall be min 0 in. (point contact) to max 2 in. (51 mm). The separation between penetrants to be min 1-1/4 in. (32 mm) to max 2 in. (51 mm). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) rigid steel conduit or steel electrical metallic tubing (EMT).
   C. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Forming Material** – (Optional, Not Shown) - Foam backer rod, mineral wool batt insulation or glass fiber insulation packed into opening and recessed min 1-1/4 in. (32 mm) from each surface of the wall to accommodate fill material.
   B. **Fill Void or Cavity Materials** – Sealant – Min 1-1/4 in. (32 mm) thickness of fill material installed to completely fill annular space between penetrants and gypsum board, flush with each surface of wall. Min 1/4 in. diam bead of fill material applied to the penetrant/wall interface at the point contact locations on both sides of the wall.

**3M COMPANY**
**3M FIRE PROTECTION PRODUCTS** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

1. Wall Assembly – The 1 or 2 hr fire rated wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features.
   A. Studs – Wall framing shall consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members shall be used to frame all sides of opening.
   B. Gypsum Board* – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 720 in² (4645 cm²) with max dimension of 30 in. (762 mm).

The hourly F and FH Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Rating of the firestop system is 3/4 hr for 2 hr rated walls and 0 hr for 1 hr rated walls.

2. Through Penetrant – One or more metallic penetrants to be installed within the opening. The annular space between penetrants shall be min 1 in. (25 mm) to max 2 in. (51 mm). The annular space between penetrants and periphery of opening shall be min 1 in. (25 mm) to max 3 in. (76 mm). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:
   A. Conduit – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or 4 in. (102 mm) diam (or smaller) steel conduit.
   B. Fill, Void or Cavity Material* – Foam – Foam fill material shall be applied to completely fill the annular space between penetrants and between penetrants and periphery of wall opening to the full thickness of the wall.

1. **Wall Assembly** – The 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400, V400 or W400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of min 3-1/2 in. (89 mm) wide steel studs spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Min two layers of 5/8 in. gypsum board attached to studs with fasteners, as specified in the individual U400, V400 or W400 Series design. Max diam of opening is 12-1/2 in. (318 mm).

2. **Through-Penetrant** – One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 1/2 in. (13 mm) to max 3-3/8 in. (86 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 8 in. (203 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – **Foam** – Min 1-1/4 in. (32 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall.

1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner described in the individual U400, V400 or W400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Steel Studs** — Steel studs to be min 3-1/2 in. (89 mm) deep and spaced max 24 in. (610 mm) OC. The opening in the wall to accommodate the penetrants shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end.

   B. **Gypsum Board** — One or two layers of nom 5/8 in. (16 mm) thick gypsum board as specified in the individual Wall and Partition Design. The framed opening in the wall shall have a max area of 720 in² (4645 cm²) with a max dimension of 30 in. (762 mm).

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Metallic Penetrants** — One or more penetrants may be installed within the through opening. The space between penetrants and periphery of opening shall be min 0 in. (point contact). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic penetrants may be used:

   A. **Tubing** — Nom 6 in. (152 mm) diam (or smaller) electrical metallic tubing (EMT). A maximum of one tube within the opening shall exceed nom 4 in. (102 mm) diam.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Intumescent Sheet — Rigid aluminum foil-faced sheet with galv sheet steel backer applied over opening at each side of wall. Sheets cut to tightly-follow the contours of the individual metallic penetrants. Sheets cut to lap a min of 2 in. (51 mm) on the wall on all sides of the opening on both sides of the wall. Prior to installation, a min 1/2 in. (13 mm) diam bead of putty shall be applied as a gasket approx 1 in. (25 mm) from and on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with one fastener in each corner. See Item 3C below for splicing of sheets.

   B. **Fill, Void or Cavity Material** — Putty — Min 1/2 in. (13 mm) diam bead of putty applied to edge of intumescent sheet at its interface with surface of wall around entire perimeter of through opening. In addition, min 1/2 in. (13 mm) diam bead of putty applied around periphery of each penetrant at its egress from the intumescent sheet on each side of wall.

   C. **Steel Cover Strip** — (Not Shown) - Intumescent sheets (Item 3A) may be spliced. Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (26 gauge) galv steel centered over entire length of each butted seam or slit made in the intumescent sheet. Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of sealant or caulk (Item 3D). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

   D. **Fill, Void or Cavity Material** — Caulk or Sealant (Not Shown) — Used with Item 3C. Prior to installation of the steel strip (Item 3C), the seam or slit in the intumescent sheet shall be covered with a min 1/4 in. (6 mm) diam bead of sealant or caulk.

1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   **A. Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   **B. Steel Straps** — Min 1 in. (25 mm) wide, 20 gauge (or heavier) galvanized steel straps secured to studs with two steel screws at each end. Straps to be located across top and bottom of the openings, 4-1/2 in. (114 mm) apart.
   
   **C. Gypsum Board** — The gypsum wallboard type, thickness, number of layers and orientation shall be as specified in the individual Wall and Partition Design. Individual openings to be 2-1/8 in. (54 mm) wide by 3-11/16 in. (94 mm) high.
   
   **D. Batts and Blankets** — (Not shown) - Min R11 glass fiber or mineral wool insulation fitted in stud cavity.

The hourly F and T Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Station Outlets** — Max four station outlets ganged together with a center line spacing of 5 in. (127 mm) for use in medical gas systems distributing oxygen, nitrous oxide, vacuum, evacuation, air and nitrogen in hospitals in rigid piping systems at pressures not exceeding 100 to 200 psig. Station outlet provided with a steel mounting plate rough-in assembly, latch valve assembly and fire retardant Cycoloy® trim plate. The steel mounting plate rough-in assembly is screw attached to the steel straps (Item 1B). The installation within the wall assembly shall be in accordance with the manufacturer’s installation instructions.

**OHIO MEDICAL CORPORATION** — Series 261000 DISS

3. **Fill, Void or Cavity Materials** — **Putty Pad** — Nom 1/8 in. (3 mm) moldable putty pads to be installed to completely cover the back side of the station outlet rough-in plate and extending to span between and fully cover the steel straps to which the rough-in plate is connected across the span of the stud cavity. Putty pads to lap min 1 in. onto and to completely seal against the gypsum board and wall studs around periphery of rough-in plate/strap assembly. Putty pads to overlap each other a min 1/4 in. (6 mm). Additional amount of putty pad to completely cover horizontal section of pipe fitting at exterior of box and extend approximately 1 in. (25 mm) up the vertical section of piping.

**3M COMPANY 3M FIRE PROTECTION PRODUCTS** — MPP+ Moldable Putty Pads

1. **Wall Assembly** — The 1 or 2 hr fire rated wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features.

   A. **Studs** — Wall framing shall consist of steel channel studs. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members shall be used to frame all sides of opening.

   B. **Gypsum Board** — One or two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max area of opening is 540 sq in. (0.35 m²) with a max dimension of 30 in. (762 mm).

   The hourly F and FH Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** — One or more metallic penetrants to be installed within the opening. The annular space between penetrants shall be min 1 in. (25 mm) to max 3 in. (76 mm). The annular space between penetrants and periphery of opening shall be min 1 in. (25 mm) to max 6 in. (152 mm). Penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of penetrants may be used:

   A. **Conduit** — Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing or 4 in. (102 mm) diam (or smaller) steel conduit.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Pillows — Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between penetrants and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening. The pillows may be cut to decrease their width and repaired with min 0.002 in. (0.05mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13 mm).

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — Fire Barrier Pillows or Fire Barrier Self-Locking Pillows

   B. **Fill, Void or Cavity Material** — Foam — Foam fill material shall be applied to completely fill the annular space between and around penetrants to the full thickness of the wall. After installation of pillows (Item 3A), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of foam.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — Fire Barrier Rated Foam, FIP 1-Step

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3 1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** — 5/8 in. (16 mm) thick, 4 ft (1.2 m) wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Diam of opening to be 1/2 in. (13 mm) to 1 in. (25 mm) larger than outside diam of through penetrant. Max diam of opening is 2-1/4 in. (57 mm).

   The F and FH Rating of the firestop system is equal to the fire rating of the wall assembly.

2. **Pull or Junction Box**+ — Min 16 ga steel pull or junction box mounted flush with or max 1/4 in. (6 mm) from surface of wall.

   See *Junction and Pull Boxes* (BGUZ) category in the Electrical Construction Material Directory for names of manufacturers.

3. **Conduit** — One nom 1 in. (25 mm) diam (or smaller) steel conduit or steel electrical metallic tubing to be installed either concentrically or eccentrically within the firestop system. The annular space shall be min 0 in. (point contact) to max 1 in. (25 mm). Conduit or EMT to be secured to back surface of pull or junction box with steel connector and rigidly supported on both sides of wall assembly.

4. **Fill, Void or Cavity Material*** — **Sealant** — Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with surface of wall opposite the pull or junction box. A min 1/2 in. (13 mm) diam bead of fill material shall be applied at the point contact location between the conduit and wall. A min 1/2 in. (13 mm) diam bead of fill material shall be applied around the entire perimeter of the pull or junction box at its interface with the wall surface. The fill material shall lap min 1/2 in. (13 mm) onto both the wall and the sides of the pull or junction box.

   **3M COMPANY** **3M FIRE PROTECTION PRODUCTS** — FD 150+ Sealant, IC 15 WB+ Caulk, CP 25WB+ Caulk, 1000 NS Sealant or FB-3000 WT Sealant

   + Bearing the UL Listing Mark

   * Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400, W400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-1/2 in. (89 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 14 in. (356 mm)

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through-Penetrant** — One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in. (point contact) to max 1-3/8 in. (35 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe** — Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** — Nom 12 in. (305 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in. (305 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.

   C. **Conduit** — Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing.

   D. **Copper Tubing** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** — Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill Void or Cavity Materials** — **Caulk** — Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/gypsum board interface at the point contact location on both sides of wall.

   **3M COMPANY** — FD-150+, IC 15WB+, CP 25WB+ or FB-3000WT Sealant.

* Indicates such products shall bear the UL or eUL Certification Mark for jurisdictions employing the UL or eUL Certification (such as Canada), respectively.
1. **Wall Assembly** — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400, V400, or W400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nominal 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be minimum 3-1/2 in. (89 mm) wide spaced maximum 24 in. (610 mm) OC.

   B. **Gypsum Board*** — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 12-1/2 in. (318 mm).

   The hourly F and FH Ratings of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Steel Sleeve** — Cylindrical sleeve fabricated from minimum 0.019 in. (0.49 mm) thick (28 gauge) galvanized sheet steel and having a minimum 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall or up to 2 in. (51 mm) longer than the thickness of wall such that, when installed, the ends of the sleeve will be flush with wall surface or project up to 1 in. (25 mm) beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the maximum 12-1/2 in. (318 mm) diam through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers.

3. **Through-Penetrants** — One metallic pipe or tubing installed concentrically or eccentrically within opening. Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** — Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** — Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Copper Tubing** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.

   D. **Copper Pipe** — Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

4. **Pipe Covering*** — Nom 1 in. (25 mm), 1-1/2 in. (38 mm) or 2 in. (51 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m3) glass fiber units jacketed on the outside with an all service jacket. Pipe covering to be minimum 12 in. (305 mm) long and installed on penetrant to extend a minimum of 3-5/8 in. (92 mm) beyond both sides of wall. Longitudinal joints sealed with metal fasteners or factory-applied SSL tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product. Annular space between pipe covering and periphery of opening to be minimum 0 in. (0 mm, point contact) to maximum 1-7/8 in. (48 mm). When the steel sleeve (Item 2) is used the annular space between the pipe covering and the periphery of the opening is to be minimum 1/8 in. (3 mm) to maximum 1-3/4 in. (44 mm).

   See **Pipe and Equipment Covering-Materials** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

5. **Fill, Void or Cavity Material*** — **Caulk or Sealant** — Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/pipe covering interface or gypsum board/sleeve at point contact location on both sides of wall.

   * Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

---

**System No. W-L-1525**

May 24, 2016

UL1479 (ASTM E814) CAN/ULC S115

1. **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nominal 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be minimum 3-1/2 in. (89 mm) wide spaced maximum 24 in. (610 mm) OC.

2. **Gypsum Board** — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 12-1/2 in. (318 mm).

3. **Steel Sleeve** — Cylindrical sleeve fabricated from minimum 0.019 in. (0.49 mm) thick (28 gauge) galvanized sheet steel and having a minimum 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall or up to 2 in. (51 mm) longer than the thickness of wall such that, when installed, the ends of the sleeve will be flush with wall surface or project up to 1 in. (25 mm) beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the maximum 12-1/2 in. (318 mm) diam through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers.

4. **Through-Penetrants** — One metallic pipe or tubing installed concentrically or eccentrically within opening. Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** — Nom 8 in. (203 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** — Nom 8 in. (203 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Copper Tubing** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.

   D. **Copper Pipe** — Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

5. **Pipe Covering*** — Nom 1 in. (25 mm), 1-1/2 in. (38 mm) or 2 in. (51 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m3) glass fiber units jacketed on the outside with an all service jacket. Pipe covering to be minimum 12 in. (305 mm) long and installed on penetrant to extend a minimum of 3-5/8 in. (92 mm) beyond both sides of wall. Longitudinal joints sealed with metal fasteners or factory-applied SSL tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product. Annular space between pipe covering and periphery of opening to be minimum 0 in. (0 mm, point contact) to maximum 1-7/8 in. (48 mm). When the steel sleeve (Item 2) is used the annular space between the pipe covering and the periphery of the opening is to be minimum 1/8 in. (3 mm) to maximum 1-3/4 in. (44 mm).

   See **Pipe and Equipment Covering-Materials** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

6. **Fill, Void or Cavity Material*** — **Caulk or Sealant** — Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/pipe covering interface or gypsum board/sleeve at point contact location on both sides of wall.

   * Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** — The 1 or 2 hr fire rated wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features.

   A. **Studs** — Wall framing shall consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members shall be used to frame all sides of opening.

   B. **Gypsum Board** — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max size of opening is 1296 in.² (0.836 m²) with a max dimension of 36 in. (914 mm).

The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings are 1/4 hr when installed in 2 hr rated walls, and 0 hr when installed in 1 hr rated walls.

2. **Through Penetrants** — One or more pipes, conduit or tubing to be installed within the opening. The space between the pipes, conduit or tubing shall be min 1/2 in. (13 mm) to max 9-1/2 in. (241 mm), except that for copper penetrants, the min annular space shall be 2 in. (51 mm). The space between pipes, conduit or tubing and periphery of opening shall be min 3/4 in. (19 mm) to max 14 in. (356 mm), except that for copper penetrants, the min annular space shall be 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Conduit** — Nom 4 in. (102 mm) diam (or smaller) electrical metallic tubing or steel conduit. A maximum of twenty conduit may be installed within the opening.

   B. **Copper Tubing or Pipe** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing or Regular (or heavier) copper pipe. A maximum of one copper penetrant may be installed within the opening.

   C. **Steel Pipe** — Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe. A maximum of one penetrant exceeding 4 in. (102 mm) diam may be installed within the opening.

   D. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Blocks to be firmly packed to fill the opening area between the grouping of conduit (Item 2A) and periphery of opening, and between and around all other individual penetrants to the periphery of the opening. Blocks installed with 5 in. (127 mm) dimension projecting through opening, centered within thickness of wall. In walls greater than 6 in. (152 mm) thick, additional blocks shall be installed or blocks shall be installed with 8 in. (203 mm) dimension projecting through opening, such that blocks are recessed max 1/2 in. (13 mm) from both surfaces of wall. Blocks can be cut to fit around penetrants and within smaller annular spaces.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** — 3M™ Fire Barrier Block B258, 3M™ Fire Barrier Plank PK39

   B. **Fill, Void or Cavity Materials** — Foam — Fill material installed to fill the entire annular space within and around the grouping of conduit penetrating items to a min thickness of 5 in. (127 mm). Fill material to be forced between blocks and periphery of opening to the max extent possible. Fill material to be injected in-between blocks and penetrants to the full depth of the blocks, as well as in any visible voids/openings between blocks (Item 3A).

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** — Fire Barrier Rated Foam, FIP 1-Step

* Indicates such products shall bear the UL or eUL Certification Mark for jurisdictions employing the UL or eUL Certification (such as Canada), respectively.
1. **Wall Assembly** — The 1 or 2 hr fire rated wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features.

   A. **Studs** — Wall framing shall consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members shall be used to frame all sides of opening.

   B. **Gypsum Board** — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max size of opening is 900 in.² (5806 cm²) with a max dimension of 30 in. (762 mm).

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** — A maximum of nine pipes, conduit or tubing to be installed within the opening. The space between the pipes, conduit or tubing shall be min 3-1/2 in. (13 mm) to max 9-1/2 in. (241 mm). The space between pipes, conduit or tubing and periphery of opening shall be min 2 in. (51 mm) to max 14 in. (356 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Conduit** — Nom 4 in. (102 mm) diam (or smaller) electrical metallic tubing or steel conduit.

   B. **Copper Tubing or Pipe** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing or Regular (or heavier) copper pipe. A maximum of one copper penetrant may be installed within the opening.

   C. **Steel Pipe** — Nom 8 in. (203 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe. A maximum of one penetrant exceeding 4 in. (102 mm) diam may be installed within the opening.

   D. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Blocks installed with 5 in. (127 mm) dimension projecting through opening and centered in wall such that it is recessed max 1/2 in. (13 mm) from each surface of wall. Blocks to be firmly packed to fill the opening area between and around all penetrants. Blocks can be cut to fit around penetrants and within smaller annular spaces.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — 3M™ Fire Barrier Block B258, 3M™ Fire Barrier Plank PK39

   B. **Fill, Void or Cavity Material** — Sealant or Caulk — Sealant to be forced between blocks and periphery of opening to the max extent possible. Sealant to be forced in-between blocks and all penetrants to the full depth of the blocks, as well as in any visible voids/openings between blocks.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — CP 25WB+ Caulk or FB-3000 WT Sealant

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

3M™ Fire Barrier Water Tight Sealant 3000 WT | Multiple max. 4 in. metallic pipes penetrating the same max. 288 square in. opening in a G500 Series floor/ceiling assembly. |
1. **Floor-Ceiling Assembly** – The 1 or 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the UL Fire Resistance Directory. The 1 hr fire rated assembly shall be constructed as specified in Design No. L501, L512 or L537. The 2 hr fire rated assembly shall be constructed as specified in Design No. L505, L511 or L536. The **F Rating of the firestop system is equal to the fire rating of the floor-ceiling assembly.** The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 1 in. larger than outside diam of penetrant.

   B. **Wood Joists** – Nom 2 by 10 in. lumber joists spaced 16 in. O.C. with nom 1 by 3 in. lumber bridging and with ends firestopped.

   C. **Furring Channels** (Not Shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 hr fire rated assembly. Furring channels spaced max 24 in. O.C.

   D. **Gypsum Board** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard (2 hr fire rated assembly only) screw-attached to furring channels. Max diam of opening is 1 in. larger than outside diam of penetrant.

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum wallboard chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. or double nom 2 by 4 in. lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. or parallel 2 by 4 in. lumber plates, tightly butted.

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. or two sets of parallel 2 by 4 in. lumber plates, tightly butted. Max diam of opening is 5 in.

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min 0 in. (point contact) to max 1 in. Pipe, conduit or tubing to be rigidly supported on both sides of floor assembly. The following types and sized of metallic pipe, conduit or tubing may be used:

   A. **Steel Pipe** – Nom 10 in. diam (or smaller) Schedule 40 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 10 in. diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 6 in. diam (or smaller) steel conduit, or nom 4 in. (or smaller) steel electrical metallic tubing.

   D. **Copper Tubing** – Nom 4 in. diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** – Nom 4 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 3/4 in. thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. or 1-1/4 in. thickness of fill material, for 1 and 2 hr rated assemblies, respectively, applied within the annulus, flush with bottom surface of ceiling or top plate. An additional min 1/4 in. crown of fill material applied to perimeter of penetrant at its egress from the top of flooring and underside of ceiling or from top of sole plate and underside of top plate.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

*Bearing the UL Classification Mark*
1. **Floor-Ceiling Assembly** – The fire rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design No. L505, L511 or L536 in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design.
   B. **Wood Joists** – Nom 2 by 10 in. (51 by 254 mm) lumber joists spaced 16 in. (406 mm) OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.
   C. **Furring Channels** – (Not shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) and spaced max 24 in. (610 mm) OC.
   D. **Gypsum Board** – Nom 4 ft (1219 mm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard screw-attached to furring channels. Max diam of ceiling opening is 3/8 in. (10 mm) greater than the outside diameter of pipe.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be centered within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of floor and ceiling. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Conduit** – Nom 3 in. (76 mm) diam (or smaller) electrical metallic tubing or steel conduit.
   C. **Copper Tubing** – Nom 1-1/2 in. (38 mm) diam (or smaller) Type L (or heavier) copper tubing.

3. **Fill, Void or Cavity Material** – **Sealant** – Fill material forced into annular spaces to fill space to max extent possible. Sealant shall be installed flush with floor and ceiling.

*Bearing the UL Classification Mark

1. **Floor-Ceiling Assembly** – The 1 hr fire rated wood joist, wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500-Series Design in the UL Fire Resistance Directory, as summarized below:
   
   A. **Joists or Trusses** – Nom 2 by 10 in. (51 by 254 mm) lumber joists, min 12 in. (305 mm) deep parallel chord trusses fabricated from nom 2 by 4 in. (51 by 102 mm) lumber in conjunction with galv steel truss plates or **Structural Wood Members** with bridging as required.
   
   B. **Flooring** – Nom 3/4 in. (19 mm) thick plywood flooring with or without **Floor Topping Mixture**. Diam of circular cutouts is 1/4 to 1/2 in. (6 to 13 mm) larger than outside diam of the pipe.
   
   C. **Furring Channels** – Rigid or resilient galv steel furring channels installed perpendicular to bottom chord of trusses.
   
   D. **Gypsum Board** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick, screw-attached to furring channels. Diam of circular cutouts is 1/4 to 1/2 in. (6 to 13 mm) larger than outside diam of the pipe.

1.1 **Chase Wall** (Optional, now shown) – The through penetrants (Item No. 2) may be routed through a 1 hr fire-rated single, double or staggered wood stud/gypsum wallboard chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.
   
   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of circular cutouts is 1/4 to 1/2 in. (6 to 13 mm) larger than outside diam of the pipe.
   
   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of circular cutouts is 1/4 to 1/2 in. (6 to 13 mm) larger than outside diam of the pipe.
   
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrant** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe or cast iron pipe, nom 4 in. (102 mm) diam (or smaller) steel conduit or steel EMT or nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing. Pipe to be installed approx midway between joists or trusses and centered in circular cutouts. Annular space between penetrant and periphery of opening shall be min 1/8 in. (3 mm) to max 1/4 in. (6 mm). Pipe to be rigidly supported on both sides of Floor-Ceiling assembly.

   T Rating is 1 hr for nom 4 in. (102 mm) diam (or smaller) penetrants. T Rating is 0 hr for all penetrants greater than nom 4 in. (102 mm) diam.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling or top plate. An additional min 1/4 in. (6 mm) crown of fill material applied to perimeter of penetrant at its egress from the top of flooring and underside of ceiling or from top of sole plate and underside of top plate.

   **3M COMPANY** – CP 25WB+ or FB-3000 WT

1. **Floor-Ceiling Assembly** – The 1 or 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the UL Fire Resistance Directory. The 1 hr fire rated assembly shall be constructed as specified in Design No. L501, L512, or L537. The 2 hr fire rated assembly shall be constructed as specified in Design No. L505, L511 or L536. The F Rating of the firestop system is equal to the fire rating of the floor-ceiling assembly. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Floor System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening in flooring to accommodate piping is 1-3/4 in.

   B. **Wood Joists** – Nom 2 by 10 in. lumber joists spaced 16 in. OC with nom 1 by 3 in. lumber bridging and with ends firestopped.

   C. **Furring Channels** – (Not Shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 hr fire rated assembly. Furring channels spaced max 24 in. OC.

   D. **Gypsum Board** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard (2 hr fire rated assembly only) screw-attached to furring channels. Max diam of opening in ceiling to accommodate piping is 1-3/4 in.

2. **Through Penetrating Product** – **Flexible Metal Piping** – Nom 1 in. diam (or smaller) Steel Flexible Metal piping. Max one flexible metal piping to be installed in the opening. Circular openings hole-sawed through flooring system and through gypsum wallboard ceiling to be 1/2 in. larger than outside diam of pipe. Piping to be installed approx midway between wood joists and centered in circular openings such that a 1/4 in. annular space is present around its perimeter at each through opening location. Flexible metal piping to be rigidly supported on both sides of floor assembly. Plastic covering on piping shall be removed for a distance of 2 ft on both sides of floor.

**TITEFLEX CORP, A BUNDY CO**

3. **Fill, Void or Cavity Material** – **Caulk** – Caulk fill material forced into annular spaces to fill spaces to max extent possible and with a min 1/4 in. high by 3/8 in. wide bead of caulk applied to the perimeter of the flexible piping at its egress from the finished floor and ceiling.

**3M COMPANY** – CP 25WB+

*Bearing the UL Classification Marking*
1. **Floor-Ceiling Assembly** – The 1 or 2 h fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the UL Fire Resistance Directory. The 1 h fire rated assembly shall be constructed as specified in Design No. L501, L512, or L537. The 2 h fire rated assembly shall be constructed as specified in Design No. L505, L511 or L536. The F Rating of the firestop system is equal to the fire rating of the floor-ceiling assembly. The general construction details of the floor-ceiling assembly are summarized below:
   A. **Floor System** – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Max diam of opening in flooring to accommodate piping is 3-1/8 in. (79 mm).
   B. **Wood Joists** – Nom 2 by 10 in. (51 by 254 mm) lumber joists spaced 16 in. (406 mm) OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.
   C. **Furring Channels** – (Not Shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 h fire rated assembly. Furring channels spaced max 24 in. (610 mm) OC.
   D. **Gypsum Board** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. First layer of gypsum board nailed to wood joists. Second layer of gypsum board (2 h fire rated assembly only) screw-attached to furring channels. Max diam of opening in ceiling to accommodate piping is 3-1/8 in. (79 mm).

2. **Through Penetrating Product** – Flexible Metal Piping – Nom 2 in. (51 mm) diam (or smaller) steel flexible metal piping. Max one flexible metal piping to be installed in the opening. Circular openings hole-sawed through flooring system and through gypsum board ceiling to be 1/2 in. (13 mm) larger than outside diam of pipe. Piping to be installed approx midway between wood joists and centered in circular openings such that a 1/4 in. (6 mm) annular space is present around its perimeter at each through opening location. Flexible metal piping to be rigidly supported on both sides of floor assembly.

   **WARD MFG L L C** – Wardflex or Wardflex II

3. **Fill, Void or Cavity Material** – Caulk – Caulk fill material forced into annular spaces to fill spaces to max extent possible and with a min 1/4 in. (6 mm) high by 3/8 in. (10 mm) wide bead of caulk applied to the perimeter of the flexible piping at its egress from the finished floor and ceiling.

1. **Floor-Ceiling Assembly** – The 1 or 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the UL Fire Resistance Directory. The 1 hr fire rated assembly shall be constructed as specified in Design No. L501, L512 or L537. The 2 hr fire rated assembly shall be constructed as specified in Design No. L505, L511 or L536. The F Rating of the firestop system is equal to the fire rating of the floor-ceiling assembly. The general construction details of the floor-ceiling assembly are summarized below:
   
   A. **Floor System** – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Max diam of opening in flooring to accommodate piping is 2-15/16 in.
   
   B. **Wood Joists** – Nom 2 by 10 in. lumber joists spaced 16 in OC with nom 1 by 3 in. lumber bridging and with ends firestopped.
   
   C. **Furring Channels** (Not Shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 hr fire rated assembly. Furring channels spaced max 24 in. OC.
   
   D. **Gypsum Board*** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard (2 hr fire rated assembly only) screw-attached to furring channels. Max diam of opening in ceiling to accommodate piping is 2-15/16 in.

2. **Through Penetrating Product*** – **Flexible Metal Piping** – Nom 2 in. diam (or smaller) steel Flexible Metal Piping. Max one flexible metal piping to be installed in the opening. Circular openings hole-sawed through flooring system and through gypsum wallboard ceiling to be 1/2 in. larger than outside diam of pipe. Piping to be installed approx midway between wood joists and centered in circular openings such that a 1/4 in. annular space is present around its perimeter at each through opening location. Flexible metal piping to be rigidly supported on both sides of floor assembly. Plastic covering on piping shall be removed for a distance of 2 ft on both sides of floor.

**OMEGA FLEX INC**

3. **Fill, Void or Cavity Material*** – **Caulk** – Caulk fill material forced into annular spaces to fill spaces to max extent possible and with a min 1/4 in. high by 3/8 in. wide bead of caulk applied to the perimeter of the flexible piping at its egress from the finished floor and ceiling.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Max diam of opening is 5 in.
   B. **Wood Joists** – Nom 10 in. deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.
   C. **Gypsum Board*** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. Max diam of opening is 5 in.

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum wall board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 2 by 6 in. or double nom 2 by 4 in. lumber studs.
   B. **Sole Plate** – Nom 2 by 6 in. or parallel 2 by 4 in. lumber plates, tightly butted. Max diam of opening is 5 in.
   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. or two sets of parallel 2 by 4 in. lumber plates, tightly butted. Max diam of opening is 5 in.
   D. **Gypsum Board*** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the opening, approx midway between joists or trusses. The annular space between penetrant and periphery of opening shall be min 0 in. to max 7/8 in. Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubings may be used:
   A. **Steel** – Nom 4 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 4 in. diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 4 in. diam (or smaller) steel conduit, or nom 4 in. (or smaller) steel electrical metallic tubing.
   D. **Copper** – Tubing Nom 4 in. diam (or smaller) Type M (or heavier) copper tube.
   E. **Copper Pipe** – Nom 4 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill Void or Cavity Materials** – **Caulk** – Min 3/4 in. thickness of caulk applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. thickness of caulk applied within the annulus, flush with bottom surface of ceiling or top plate. Min 1/2 in. diam bead of caulk applied to the penetrant/floor or sole plate interface at point contact location on the top surface of floor or sole plate and at the penetrant/ceiling or top plate interface at point contact location on lower surface of assembly.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Max diam of opening is 5-1/2 in. (140 mm).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.

   C. **Gypsum Board*** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max diam of opening is 5-1/2 in. (140 mm).

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 in. by 6 in. (51 mm by 152 mm) or double nom 2 in. by 4 in. (51 mm by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 in. by 6 in. (51 mm by 152 mm) or parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 5-1/2 in. (140 mm).

   C. **Top Plate** – The double top plate shall consist of two nom 2 in. by 6 in. (51 mm by 152 mm) or two sets of parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 5-1/2 in. (140 mm).

   D. **Gypsum Board*** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 1-3/8 in. (0 mm to max 35 mm). Penetrants to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.

   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

   F. **Through Penetrating Product*** – **Flexible Metal Piping** – The following types of steel flexible metal gas piping may be used:

      1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

      4. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface.

      5. **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 5 in. (127 mm).

B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.

C. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max diam of opening is 5 in. (127 mm).

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

A. **Studs** – Nom 2 in. by 6 in. (51 mm by 152 mm) or double nom 2 in. by 4 in. (51 mm by 102 mm) lumber studs.

B. **Sole Plate** – Nom 2 in. by 6 in. (51 mm by 152 mm) or parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 5 in. (127 mm).

C. **Top Plate** – The double top plate shall consist of two nom 2 in. by 6 in. (51 mm by 152 mm) or two sets of parallel 2 by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 5 in. (127 mm).

D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 1-1/2 in. (0 mm to max 38 mm). Space between penetrants to be min 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:

A. **Steel Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

B. **Iron Pipe** – Nom 2 in. (51 mm) diam (or smaller) cast or ductile iron pipe.

C. **Conduit** – Nom 2 in. (51 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. rigid steel conduit.

D. **Copper Tubing** – Nom 1-1/2 in. (38 mm) diam (or smaller) Type L (or heavier) copper tubing.

E. **Copper Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Regular (or heavier) copper pipe.

F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:

1. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

**Ward MFG Inc.**

3. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface.

**3M Company** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual 500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Max area of opening is 288 in² (1471 cm²) with max dimension of 48 in. (1219 mm). The longer dimension of rectangular opening to be parallel to the wood joist direction and opening center between joists.

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.

   C. **Gypsum Board*** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max area of opening is 288 in² (1471 cm²) with max dimension of 48 in. (1219 mm). The longer dimension of rectangular opening to be parallel to the wood joist direction and opening center between joists.

2. **Through Penetrants** – One or more metallic pipes, conduits or tubes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Space between penetrants to be min 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrants to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 4 in. (102) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 4 in. rigid steel conduit.

   D. **Copper Tubing** – Max three lengths of Nom 4 in. (102mm) diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** – Max three lengths of Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

   The T Rating of the firestop system is dependent upon the max nom diam and type of through penetrant used within the firestop system as shown in the table below:

<table>
<thead>
<tr>
<th>Type of Through Penetrant</th>
<th>Max Nom Diam. In. (mm)</th>
<th>T Rating Hr</th>
</tr>
</thead>
<tbody>
<tr>
<td>Copper Tube, CU Pipe</td>
<td>4 (102)</td>
<td>1/2</td>
</tr>
<tr>
<td>Conduit steel pipe, EMT, Iron pipe</td>

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe. Max diam of opening is 5-1/2 in. (140 mm).
   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.
   C. **Gypsum Board*** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe. Max diam of opening is 5-1/2 in. (140 mm).
2. **Metallic Pipe** – One metallic drain pipe with max 4 in. (102 mm) diam toilet flange installed within the firestop system. The annular space between drain pipe and periphery of opening shall be min 1/2 in. to max 1-1/2 in. Pipe to be rigidly supported on lower side of floor assembly. The following types and sizes of metallic pipes, fittings and flanges may be used:
   A. **Iron Pipe** – Nom 4 in. (or smaller) Schedule 40 cast iron pipe for use in vented (drain, waste or vent) piping system. Pipe and elbow reliably supported above ceiling.
   B. **Copper Pipe** – Nom 4 in. (or smaller) Type DWV copper pipe for use in vented (drain, waste or vent) piping systems. Pipe and elbow reliably supported above ceiling.
3. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within annular space around perimeter of ABS Pipe (Item 2), flush with top surface of floor.
4. **Water Closet** – Floor mounted vitreous china water closet.

1. **Floor-Ceiling Assembly** — The 1 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Designs in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** — Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 6 in. (152 mm).
   B. **Wood Joists** — Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.
   C. **Gypsum Board** — Thickness, type, number of layers and fasteners as required in the individual Floor-Ceiling Design.

2. **Plastic Plumbing Fixtures** — One-piece molded nonmetallic shower base receptor with max 4 in. (102 mm) diam plastic drain and stainless steel drain plate. Shower base receptor to be installed centrically within the annular space in accordance with the manufacturer’s instructions.

   TILE-REDI USA LLC — Model 3360L, 3360R, 37NEO, 3737, 4837, 4837ADA, 4837MB or 4848

3. **Tile** — (Not Shown) - Ceramic or stone tile applied to shower pan floor with epoxy adhesive in accordance with shower base receptor installation instructions.

4. **Metallic Pipe** — One metallic pipe installed into PVC shower drain at bottom of the shower base receptor using compression coupling. Penetrant to be rigidly supported in floor-ceiling assembly. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

5. **Compression Coupling** — Nonmetallic shower drain (Item 2) to be secured to metallic pipe with compression type high pressure pipe coupling with elastomeric gasket and a stainless steel jacket with stainless steel band clamps.

6. **Firestop System** — The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** — Wrap Strip — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Four layers of wrap strip tightly wrapped around PVC shower drain pipe/compression coupling (Item 5) with butted seams or continuous layers and with the top edge of the wrap strip flush with bottom surface of plywood. Wrap strip layer temporarily held in position using tape.

   B. **Steel Collar** — Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and tabs to retain wrap strip layer. Coils of pretcut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against compression coupling/drain pipe, and collar to be compressed around wrap strip using a min 1/2 in. (13 mm) wide stainless steel clamp at the collar midheight. Collar to be secured to underside of flooring system with steel screws with min 1-1/4 in. (32 mm) diam steel washers through anchor tabs of collar bent 90 deg to rest against plywood subfloor. Min of four screws symmetrically located are required.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor Assembly** — The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** — Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Max diam of opening is 5-1/2 in. (140 mm).
   B. **Joists** — Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and ends firestopped.
   C. **Gypsum Board*** — Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick, attached as described in the individual Floor-Ceiling Design.

2. **Chase Wall** — The through penetrant (Item No. 3) shall be routed through a 1 hr fire-rated single, double or staggered wood studs/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** — Nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber studs.
   B. **Sole Plate** — Nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in sole plate to be max 5-1/2 in. (140 mm). Plate may be discontinuous over opening, terminating at both sides of periphery of opening (see Item C1).
   C. **Top Plate** — The double top plate shall consist of two nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in top plate to be max 5-1/2 in. (140 mm). Plate may be discontinuous over opening, terminating at both sides of periphery of opening (see Item C1).  
   C1. **Steel Plate** — Nom 16 gauge (or heavier) 1-1/2 in. (38 mm) wide steel plate, connecting both sides of discontinuous top and sole plate. Steel plates to be sized in length to overlap a min of 4 in. (102 mm) onto each side of the discontinuous top or sole plates and secured with a min of two 1/2 in. (13 mm) long (or longer) No. 8 (or larger) wood screws on each side of each plate.
   D. **Gypsum Board*** — Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

3. **Through Penetrant** — One metallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1-3/8 in. (35 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Steel Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Copper Tubing** — Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   D. **Copper Pipe** — Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

4. **Branch Piping** — (Optional) — One metallic pipe to be connected to through penetrant (Item 3) and installed within opening in subfloor. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13 mm). The following types and sizes of metallic pipes may be used:
   A. **Steel Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** — Nom 3 in. (76 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Copper Tubing** — Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tubing.
   D. **Copper Pipe** — Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.

5. **Fill, Void or Cavity Materials*** — **Caulk or Sealant** — Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant (Item 3), flush with top surface of floor or sole plate and flush with bottom surface of top plate. Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of branch piping (Item 4), flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/floor interface and the pipe/plate interface.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

1. **Floor-Ceiling Assembly** — The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** — Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Rectangular cutout in flooring to accommodate the bathtub drain piping (Item 2) to be max 8 by 12 in. (203 by 305 mm). Cutout to be patched using one layer of min 3/4 in. (19 mm) thick plywood or min 5/8 in. (16 mm) thick gypsum board (Item 1C). One piece of plywood or gypsum board, min 2 in. (51 mm) longer and wider than the cutout in the flooring, cut in half in short dimension at opening hole-sawed for bathtub drain piping (Item 2). Two halves positioned below flooring, concentric with cutout, with cut edges tightly butted with no visible openings, and screw attached by means of 1-1/2 in. (38 mm) long laminate screw spaced max 4-1/2 in. (114 mm) OC, at every corner and max ½ in. (13 mm) from cut edges. Max diameter opening is 5-1/2 in. (140 mm).

   B. **Wood Joists** — Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.

   C. **Gypsum Board** — Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design.

2. **Drain Piping** — One metallic pipe or tube with drain fittings and bathtub waste/overflow fittings installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 1-3/8 in. (35 mm). Penetrant to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** — Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Packing Material** — Min 3 in. thickness of min 6 pct loose ceramic fiber or mineral wool insulation firmly packed into opening.

3. **Fill, Void or Cavity Materials** — **Caulk or Sealant** — OMin 5/8 in. (16 mm) thickness of sealant applied within annular space around perimeter of Drain Piping, flush with top surface of plywood or gypsum wallboard patch.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** — IC 15WB+ Sealant, CP 25WB+ Caulk, or FB-3000 WT

   * Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

March 23, 2012
F Rating – 1 Hr
T Rating – 1 Hr
L Rating At Ambient – Less Than 1 CFM/Sq Ft (See Item 3)
L Rating At 400°F – Less Than 1 CFM/Sq Ft (See Item 3)

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring** – Normal or Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete as specified in the individual G500 Series Design. Max diam of opening is 11-1/4 in. (286 mm).
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of opening is 11-1/4 in. (286 mm).

2. **Through Penetrant** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the opening, approx midway between joists. The annular space between penetrant and periphery of opening shall be min 1/4 in. (6 mm) to max 1/2 in. (13 mm). Penetrant to be rigidly supported on both sides of floor assembly. The following types and sizes of metallic pipe, conduit or tubing may be used:
   A. **Steel Pipe** – Nom 10 in. (254 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 10 in. (254 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 6 in. (152 mm) diam (or smaller) steel conduit, or nom 4 in. (102 mm) diam (or smaller) electrical metallic tubing.
   D. **Copper Tubing** – Nom 3 in. (76 mm) diam (or smaller) Type L (or heavier) copper tube.
   E. **Copper Pipe** – Nom 3 in. (76 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling. An additional min 1/4 in. (6 mm) crown of fill material applied to perimeter of penetrant at its egress from the underside of ceiling.

   **3M COMPANY** – CP-25 WB+ Caulk, IC-15 WB+ Caulk or FB-3000 WT Sealant
   (Note: L Rating applies only when CP 25 WB+ Caulk or FB-3000 WT Sealant is used.)

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring** – Normal or Lightweight concrete as specified in the individual G500 Series Design. Max diam of opening is 5-1/2 in. (140 mm).
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of opening is 5-1/2 in. (140 mm).

2. **Through Penetrants** – One metallic pipe, conduit, tubing or flexible metal pipe installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 1-3/8 in. (0 mm to max 35 mm). Penetrant to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. rigid steel conduit.
   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – **Flexible Metal Piping** – The following types of steel flexible metal gas piping may be used:
      1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **OMEGA FLEX INC.**
      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **TITEFLEX CORP., A BUNDY CO.**
      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         **WARD MFG INC.**

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor interface on top surface of floor and at penetrant/ceiling interface.
   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   
   A. **Flooring** – Normal or Lightweight concrete as specified in the individual G500 Series Design. Max diam of opening is 5 in. (127 mm).
   
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design.
      
      Max diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 1-1/2 in. (0 mm to max 38 mm) Space between penetrants to be min 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:
   
   A. **Steel Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   
   B. **Iron Pipe** – Nom 2 in. (51 mm) diam (or smaller) cast or ductile iron pipe.
   
   C. **Conduit** – Nom 2 in. (51 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. (152 mm) rigid steel conduit.
   
   D. **Copper Tubing** – Nom 1-1/2 in. (38 mm) diam (or smaller) Type L (or heavier) copper tubing.
   
   E. **Copper Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Regular (or heavier) copper pipe.
   
   F. **Through Penetrating Product** – **Flexible Metal Piping** – The following types of steel flexible metal gas piping may be used:
      
      1. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         
         **OMEGA FLEX INC.**
      
      2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         
         **TITEFLEX CORP. A BUNDY CO.**
      
      3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
         
         **WARD MFG INC.**
   
3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor interface on top surface of floor and at penetrant/ceiling interface.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring** – Lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete as specified in the individual G500 Series Design. Diam of opening shall be max 1 in. (25 mm) larger than the nom diam of pipe (Items 2 and 3).
   B. **Joists** – Steel joists or **Structural Steel Members* as specified in the individual G500 Series Design.
   C. **Gypsum Board* – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of opening is 5-1/2 in. (140 mm).

2. **Metallic Pipe** – One metallic drain pipe with max 4 in. (102 mm) diam toilet flange installed within the firestop system. The annular space between drain pipe and periphery of opening shall be min 1/2 in. to max 1-1/2 in. Pipe to be rigidly supported on lower side of floor assembly. The following types and sizes of metallic pipes, fittings and flanges may be used:
   A. **Iron Pipe** – Nom 4 in. diam (or smaller) Schedule 40 cast iron pipe for use in vented (drain, waste or vent) piping system. Pipe and elbow reliably supported above ceiling.
   B. **Copper Pipe** – Nom 4 in. diam (or smaller) Type DWV copper pipe for use in vented (drain, waste or vent) piping systems. Pipe and elbow reliably supported above ceiling.

3. **Fill, Void or Cavity Materials* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within annular space around perimeter of ABS Pipe (Item 2), flush with top surface of floor.
   **3M COMPANY** – IC 15WB+, CP 25WB+, FB-3000WT

4. **Water Closet** – Floor mounted vitreous china water closet.

1. **Floor-Ceiling Assembly** – The minimum 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:

   A. **Concrete Floor** – Normal weight or lightweight (100-150 pcf or 1600-2400 kg/m³) concrete over metal lath or steel deck as specified in the individual G500 Series Design. Max diam of floor opening is 5-1/2 in. (140 mm).

   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.

   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of ceiling opening is 5-1/2 in. (140 mm).

1.1. **Chase Wall** – (Optional, Not Shown) – The through penetrant (Item 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board or steel stud/gypsum board chase wall having a fire rating consistent with that of the Floor-Ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 4 in. (51 by 102 mm), nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber or min 3-1/2 in. (89 mm) steel studs.

   B. **Sole Plate or Floor Runner** – Nom 2 by 4 in. (51 by 102 mm), nom 2 by 6 in. (51 by 152 mm) or parallel nom 2 by 4 in. (51 by 102 mm) lumber plates or steel floor runners sized to accommodate the steel studs, tightly butted. The steel floor runners may be discontinuous over opening, terminating at both sides of opening. Max diam of opening is 5-1/2 in. (140 mm).

   C. **Top Plate or Ceiling Runner** – The double top plate shall consist of two nom 2 by 4 in. (51 by 102 mm), two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. The steel ceiling runners shall be sized to accommodate the steel studs, tightly butted. The steel ceiling runners may be discontinuous over opening, terminating at both sides of opening. Max diam of opening is 5-1/2 in. (140 mm).

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One metallic pipe, conduit, tubing or flexible metal pipe installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (0 mm) (point contact) to max 1-3/8 in. (35 mm). Penetrant to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:

   A. **Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or rigid steel conduit.

   D. **Copper Tubing** – Nom 4 in. (102 mm) diam (or smaller) Type L (or heavier) copper tubing.

   E. **Copper Pipe** – Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:

      1.) Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
OMEGA FLEX INC
2.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

GASTITE, DIV OF TITIFLEX
3.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

WARD MFG LLC

3. Fill, Void or Cavity Materials* – Caulk or Sealant – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface.

1. **Floor-Ceiling Assembly** – The minimum 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Concrete Floor** – Normal weight or lightweight (100-150 pcf or 1600-2400 kg/m³) concrete over metal lath or steel deck as specified in the individual G500 Series Design. Max diam of floor opening is 5 in. (127 mm).
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of ceiling opening is 5 in. (127 mm).

1.1. **Chase Wall** – (Optional, Not Shown) – The through penetrant (Item 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board or steel stud/gypsum board chase wall having a fire rating consistent with that of the Floor-Ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 2 by 4 in. (51 by 102 mm), nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber or min 3-1/2 in. (89 mm) steel studs.
   B. **Sole Plate or Floor Runner** – Nom 2 by 4 in. (51 by 102 mm), nom 2 by 6 in. (51 by 152 mm) or parallel nom 2 by 4 in. (51 by 102 mm) lumber plates or steel floor runners sized to accommodate the steel studs, tightly butted. The steel floor runners may be discontinuous over opening, terminating at both sides of opening. Max diam of opening is 5 in. (127 mm).
   C. **Top Plate or Ceiling Runner** – The double top plate shall consist of two nom 2 by 4 in. (51 by 102 mm), two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. The steel ceiling runners shall be sized to accommodate the steel studs, tightly butted. The steel ceiling runners may be discontinuous over opening, terminating at both sides of opening. Max diam of opening is 5 in. (127 mm).
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One or more metallic pipes, conduits, tubes or flexible metal pipes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in (point contact) to max 1-1/2 in. (38 mm). Space between penetrants to be min 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrants to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:
   A. **Steel Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe** – Nom 2 in. (51 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit** – Nom 2 in. (51 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 6 in. rigid steel conduit.
   D. **Copper Tubing** – Nom 1-1/2 in. (38 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Regular (or heavier) copper pipe.
   F. **Through Penetrating Product** – Flexible Metal Piping – The following types of steel flexible metal gas piping may be used:
      1.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.
OMEGA FLEX INC
2.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

GASTITE, DIV OF TITEFLEX
3.) Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

WARD MFG LLC
3. Fill, Void or Cavity Materials* – Caulk or Sealant – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface.

1. **Floor-Ceiling Assembly** – The minimum 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:

   **A. Concrete Floor** – Normal weight or lightweight (100-150 pcf or 1600-2400 kg/m³) concrete over metal lath or steel deck as specified in the individual G500 Series Design. Max area of floor opening is 288 in.² (1471 cm²) with max dimension of 48 in. (1.22 m). The longer dimension of rectangular opening to be parallel with the steel joist direction and opening to be centered between joists.

   **B. Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.

   **C. Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max area of ceiling opening is 288 in.² (1471 cm²) with max dimension of 48 in. (1.22 m). The longer dimension of rectangular opening to be parallel with the steel joist direction and opening to be centered between joists.

2. **Through Penetrants** – One or more metallic pipes, conduits or tubes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Space between penetrants to be min 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrants to be rigidly supported on both sides of floor-ceiling. The following types and sizes of penetrants may be used:

   **A. Steel Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   **B. Iron Pipe** – Nom 4 in. (102 mm) diam (or smaller) cast or ductile iron pipe.

   **C. Conduit** – Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing (EMT) or nom 4 in. rigid steel conduit.

   **D. Copper Tubing** – Max three lengths of Nom 4 in. (102mm) diam (or smaller) Type L (or heavier) copper tubing.

   **E. Copper Pipe** – Max three lengths of Nom 4 in. (102 mm) diam (or smaller) Regular (or heavier) copper pipe.

   The T, FT and FTH Ratings of the firestop system are dependent upon the max diam and type of through penetrant used within the firestop system as shown in the table below:

<table>

3. **Firestop System** – The details of the firestop system shall be as follows:

   **A. Packing Material** – (Optional) – Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor as required to accommodate the required thickness of fill material.

   **B. Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor at top surface of floor and at penetrant/ceiling interface.

</tbody>
</table>
1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Except as footnoted for floor assembly in table under Item 3, min thickness of solid concrete floor or wall assembly is 4-1/2 in. (114 mm). Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Diam of opening through floor or wall to be 0 in. to 1/4 in. (0 mm to 6 mm) larger than the outside diam of nom 2 in. (51 mm) diam and smaller pipes or conduits. Diam of opening to be 0 in. to 1/2 in. (0 mm to 13 mm) larger than the outside diam of nom 2-1/2 in. (64 mm) diam and larger pipes or conduits. Max diam of opening is 7 in. (178 mm). See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered in the through opening. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 solid-core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   B. **Cellular – Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 6 in. (152 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   E. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   F. **Polybutylene (PB) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR11 (or heavier) PB pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   G. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) (Schedule 40 or 80) PVC conduit installed in accordance with Article 347 of the National Electric Code (NFPA No. 70).
   
   H. **Flame Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 (or heavier) FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 1 in. and 2 in. (25 mm and 51 mm) wide strips. Strips tightly wrapped around nonmetallic pipe (foil side exposed) with the edges butted against the underside of the concrete floor or both sides of wall surface. Sufficient layers of wrap strip shall be installed to lap a min of 3/16 in. (5 mm) on the concrete around the entire perimeter of the through opening. The min wrap strip width and the min number of layers of wrap required is dependent upon the pipe type, the nom pipe diam, the wall of floor thickness and the hourly T Rating required, as shown in the following table.

</table>

(a) – Requires use of aluminum tape detailed in Item 3E.
(b) – Requires use of pipe covering detailed in Item 3D.
(c) – For nom 6 in. (152 mm) diam pipe, 1 in. and 2 in. (25 mm and 51 mm), wide wrap strips are “Stacked” to attain nom 3 in. (76 mm) wrap strip width.

Each layer of wrap strip to be installed with butted seam with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. In wall assemblies, the wrap strip is to be installed in the same manner used for floor assemblies, but it shall be installed symmetrically on both sides of the wall assembly.

3M COMPANY – FS-195+

B. Fill, Void or Cavity Materials* – Caulk, Sealant or Putty (Not Shown) – Generous bead of caulk or putty to be applied to outer perimeter of wrap strip at its interface with floor or wall surface(s).

3M COMPANY – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty.
(Note: L Ratings apply only when CP 25WB+ caulk or FB-3000 WT sealant is used. CP 25WB+ not suitable for use with CPVC pipes.)

C. Steel Collar – Nom 1 in., 2 in. or 3 in. (25 mm, 51 mm or 76 mm) deep collar, dependent upon wrap strip width, with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against floor or wall surface(s), and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. Two band clamps are required for 3 in. (76 mm) high collar on nom 6 in. (152 mm) diam pipe. As an alternate to the band clamps, 1 in. and 2 in. (25 mm and 51 mm) deep collars may be secured by a means No. 10 by 1/2 in. (13 mm) long sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. A min of two and three screws are required for 1 in. and 2 in. (25 mm and 51 mm) deep collars, respectively. Collar to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Anchor bolts to be used with every other anchor tab or as described in the following which ever is greater. Two anchor bolts, symmetrically located, required for nom 1/2 in. (13 mm) to nom 2 in. (51 mm) diam pipes. Three anchor bolts, symmetrically located, required for nom 2-1/2 in. to 3 in. (64 mm to 76 mm) diam pipes. Four anchor bolts, symmetrically located, required for nom 3-1/2 in. and 4 in. (89 mm to 102 mm) diam pipes. For 6 in. (152 mm) diam pipes, anchor bolts to be used with each anchor tab. Retainer tabs to be bent 90 deg toward pipe to lock wrap strip layers in position.

D. Pipe Covering* – Nom 1 in. (25 mm) thick hollow cylindrical heavy density glass fiber units jacketed on the outside with an all service jacket. When required (see table), min 6 in. (152 mm) length of pipe covering installed around pipe at its egress from the steel collar (Item C) on the underside of floor or on both sides of wall. Pipe covering secured to pipe with steel wire ties spaced max 4 in. (102 mm) OC. Edge of pipe covering abutting steel collar to be sealed with a min 1/4 in. (6 mm) diam bead of caulk or putty (Item B).

See Pipe and Equipment Covering – Materials (BRGU) category in Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

E. Foil Tape (Not Shown) – When required (see tables), nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip (Item 3A) or Firestop Device (Item 3F). Min one layer wrapped around pipe with top edge of tape flush with bottom of surface of floor and extending downward. In walls, min one layer wrapped around pipe flush with both sides of wall and extending outward.
F. **Firestop Device** (Not Shown) – As an alternate to Items A and C when nom 1-1/2, 2, 3, 4 or 6 in. (38, 51, 76, 102 or 152 mm) diam nonmetallic pipes are used, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of floor or on both sides of wall in accordance with the accompanying installation instructions. The firestop device type to be used is dependent upon the wall of floor thickness, the pipe type and nom pipe diam, as tabulated below:

F Rating – 2 Hr
T Ratings – 0 and 2 Hr
L Rating at Ambient – 7 CFM/sq ft
L Rating at 400°F – less than 1 CFM/sq ft (See Item 3C)
W Rating – Class I (See Item 3)

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of circular opening is 6-1/2 in. (165 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Nonmetallic Pipe or Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core, polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems or **Rigid Nonmetallic Conduit** or SDR 13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. A max of one pipe or conduit is permitted in the firestop system. Except as noted in Item B, the pipe or conduit shall be centered in the through opening. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly.

   See **Rigid Nonmetallic Conduit** (DZKT) category in the UL Electrical Construction Materials Directory for names of manufacturers.

3. **Firestop System** – The hourly T Ratings for the firestop system are dependent upon the firestop orientation (wall or floor), the size of the nonmetallic pipe or conduit, and the floor thickness, as tabulated below:

(a) W = wall, F = floor
(b) Min concrete floor thickness is 2-1/2 in. (64 mm).

The details of the firestop system shall be as follows:

A. **Steel Support Clips** – Nom 1 in. (25 mm) wide by nom 0.019 in. (0.5 mm) thick (28 gauge) galv steel strips field-formed into “Z”-shape with height of Z-shape equal to the floor thickness and with width of bottom (as installed) leg of sufficient length to span annular space. Top (as installed) leg of Z-shape to be min 2 in. (51 mm) long and may or may not be secured to top surface of floor with masonry anchors. As an alternate to the Z-shape clips, the galv steel strips may be formed into “L” shape with height equal to 2 in. (51 mm) and with bottom (as installed) leg of sufficient length to span annular space. Clips secured to outermost wrap strip layer with steel wire tie prior to insertion in through opening. Min of three steel support clips to be used, symmetrically located, with bottom leg of clips flush with bottom plane of floor. When annular space around nom 1/2 in. to 2 in. (13 mm to 51 mm) diam pipe in floor assembly is 1/4 in. to 3/8 in. (6 mm to 10 mm) , steel support clips are not required.

B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) to fill annular space around pipe. A min of one layer of wrap strip is required for nom 1/2 in. to 2 in. (13 mm to 51 mm) diam pipes. A min of two layers of wrap strip is required for nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes. A min of three layers of wrap strip is required for nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes. Each layer of wrap strip is to be installed with butted seam with butted seams in successive layers staggered. Wrap strip layers securely bound with steel wire or aluminum foil tape and slid through penetration.
into through opening such that the bottom edges are flush with the bottom plane of the floor and are resting on the steel support clip legs. When nom 2 in. to 4 in. (51 mm to 102 mm) diam PVC pipe is used in min 4-1/2 in. (114 mm) thick concrete floor, the pipe may be installed eccentrically in the through opening (min zero clearance at point contact location) provided that (1) the inside diam of the through opening is 1.3 to 1.5 times larger than the outside diam of the pipe, (2) the annular space between the pipe and the sides of the opening at the bottom 2 in. (51 mm) of the through opening is completely filled with wrap strip layers installed following the contour of the pipe and (3) the bottom edges of the wrap strip layers are reliably supported by “Z”-shaped steel support clips anchored to the top surface of the concrete floor. In wall assemblies, the wrap strip layers on the nonmetallic pipe are to be installed in the same manner used for floor assemblies, but shall be installed symmetrically on both sides of the wall with the exposed edges of the wrap strip layers flush with the wall surfaces.

3M COMPANY – FS-195+

C. Fill, Void or Cavity Materials* – Caulk or Sealant – Min 1/4 in. (6 mm) diam continuous bead applied to inside walls of through opening prior to installation of steel support clips and/or wrap strip. Caulk bead to be recessed 1 in. (25 mm) from the bottom plane or floor. In wall assemblies, caulk bead to be recessed 1 in. (25 mm) from wall surface on both sides of wall. In floor assemblies, a nom 1/2 in. (13 mm) thick coating of caulk is to be applied to the top edges of the wrap strip layers and to fill all gaps at the wrap strip/concrete interface. In wall assemblies, the exposed edges of the wrap strip layers and all gaps at the wrap strip/concrete interface on both sides of the wall to be coated with thin layer of caulk.

3M COMPANY – CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.
(Note: W Rating applies only when FB-3000 WT sealant is used. CP 25WB+ not suitable for use with CPVC pipes.)

*Bearing the UL Classification Marking
++Bearing UL Listing Mark

Copyright © 2010 Underwriters Laboratories Inc.

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of rectangular or square opening 64 sq in. (413 sq cm) with max dimension of 8 in. (203 mm). Max diam of circular opening is 8 in. (203 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** (Optional) – Min 3/16 in. (5 mm) thick steel welded to form a four sided square or rectangular sleeve. For circular openings, steel sleeve to consist of nom 8 in. (203 mm) diam (or smaller) Schedule 40 (or heavier) steel pipe.

3. **Nonmetallic Pipe or Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems or Rigid Nonmetallic Conduit++ or SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. One pipe to be installed within the firestop system. A min 1 in. to max 3 in. (25 mm to max 76 mm) annular space is required within the firestop system. Pipe to be rigidly supported on both sides of the floor or wall assembly.

4. **Firestop System** – The firestop system shall consist of the following:

   **A. Fill, Void or Cavity Material* – Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Diam of hole cut in sheet to accommodate pipe to be 1 in. (25 mm) larger than diam of pipe such that a uniform 1/2 in. (13 mm) space is present between the pipe and perimeter of the sheet cutout. Sheet cut to lap a min of 2 in. (51 mm) on the concrete on all sides of the through opening. A max of one slit may be made in the sheet to permit installation of the sheet about the pipe. The slit shall be made perpendicular to the side of the sheet nearest the circular cutout and shall intersect with the circular cutout in line with the center of the cutout. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface). Sheet secured to top surface of floor and to both surfaces of wall using 1/4 in. (6 mm) diam by steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) OC. with additional fasteners required max 1 in. (25 mm) from both sides of slit made to permit installation of sheet about pipe. Prior to installation of the sheet(s), a nom 1/4 in. (6 mm) diam bead of caulk or putty (Item D) shall be applied to the top surface of the floor and on both surfaces of the wall around the perimeter of the through opening. Min 2 in. (51 mm) wide strip of min 0.016 in. (0.41 mm) thick (30 gauge) galv steel sheet to be centered over slit in sheet and secured to galv steel sheet backer on both sides of slit with steel sheet metal screws located max 1/2 in. (13 mm) from edge of cutout and max 1/2 in. (13 mm) from edge of through opening. Prior to installation of the steel cover strip, the slit in the sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulk or putty (Item D).

   3M COMPANY – CS-195+

   **B. Fill, Void or Cavity Materials* – Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed). Two layers of wrap strip are required. Each layer of wrap strip to be installed with butted seam with butted seam of second layer offset from butted seam of first layer. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. In wall assemblies, the wrap strip is to be installed in the same manner used for floor assemblies, but it shall be installed symmetrically on both sides of wall assembly.

   3M COMPANY – FS-195+
System No. C-AJ-2003 continued

C. **Steel Collar** – Nom 1-1/4 in. (32 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (30 gauge) galv sheet steel available from pipe wrap manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (30 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degrees and with retainer tabs bent inward 90 degrees wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Steel collar and wrap strip slid into cutout in intumescent sheet such that the bottom edges of wrap strip layers and steel collar project 1 in. (25 mm) below top plane of floor and such that anchor tabs rest on top surface of intumescent sheet. Secure anchor tabs to galv steel sheet backer of intumescent sheet with steel sheet metal screws. Compress wrap strip layers around pipe above intumescent sheet using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp with worm drive tightening mechanism. Steel collar not required for firestops in wall assemblies. Instead, the wrap strip layers are slid into cutout in intumescent sheet on each side of wall such that the exposed edges of wrap strip layers project 1 in. (25 mm) from exposed face of intumescent sheet. Compress wrap strip layers around pipe using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the projecting wrap strip midheight.

D. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Generous application of caulk to be applied to the base of the wrap strip at its egress from the intumescent sheet(s) in addition to coating all exposed seams in wrap strip layers. Nom 1/4 in. (6 mm) bead of caulk to be applied to slit in intumescent sheet(s) prior to installation of steel cover strip.

3M COMPANY – CP 25WB+ caulk or FB-3000WT sealant. (CP 25WB+ not suitable for use with CPVC pipes.)

E. **Fill, Void or Cavity Materials** – **Graphite Seal, Caulk, Sealant or Putty** (Not Shown) – One layer of 1/2 in. x 1/16 in. (13 mm x 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening.

3M COMPANY – E-FIS or Ultra GS seals, CP 25WB+, IC 15WB+ caulk, FB-3000WT sealant or MP+ Stix putty. (Note: CP 25WB+ not suitable for use with CPVC pipes.)

---

1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Except as noted for floor assembly in table under Item 4, min thickness of solid concrete floor or wall assembly is 4-1/2 in. (114 mm). Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of preformed or core-drilled circular opening is 7 in. (178 mm) when nom 6 in. (152 mm) diam pipe is used. When nom 8 in. or 10 in. (203 mm or 254 mm) diam pipe is used, the diam of the circular through opening shall be max 1-1/2 in. (38 mm) larger than the outside diam of the pipe and the annular space around the pipe shall be back filled with hydraulic cement throughout the thickness of the floor or wall assembly.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Nonmetallic Pipe** – Nom 6 in., 8 in. or 10 in. (152 mm, 203 mm or 254 mm) diam Schedule 40 solid core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. One pipe to be centered within the firestop system. Pipe to be rigidly supported on both sides of the floor or wall assembly.

3. **Firestop System** – The hourly F and T Ratings for the firestop system are dependent upon the firestop orientation (wall or floor) and the size of the nonmetallic pipe, as tabulated below:

   (a) W=wall, F=floor.
   (b) Min concrete floor thickness is 2-1/2 in. (64 mm)

   The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide by 24 in. (610 mm) long strips. Two stacks of wrap strips (nom 4 in. (102 mm) stack height) tightly wrapped around nonmetallic pipe with the top edges butted against the underside of the concrete floor. For 2 hr F Rating with nom 6 in. (152 mm) diam pipes, three layers of wrap strip are required in each stack. For 3 hr F Rating with nom 6 in. (152 mm) diam pipes and for 2 hr F Rating with nom 8 in. (203 mm) diam pipes, four layers of wrap strip are required in each stack. For 2 hr F Rating with nom 10 in. (254 mm) diam pipes, five layers of wrap strip are required in each stack. Each layer of wrap strip to be installed with putted seam with butted seams in successive layers staggered. Wrap strips temporarily held in position using aluminum foil tape, filament tape, steel wire tie, or equivalent. In wall assemblies, the wrap strips are to be installed in the same manner used for floor assemblies, but they shall be installed symmetrically on both sides of the wall assembly.

   3M COMPANY – FS-195+
B. **Steel Collar** – Nom 4 in. (102 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs to retain wrap strip layers. Coils of precut min 0.019 in. (0.5 mm) thick (No. 26 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.019 in. (0.5 mm) thick (No. 26 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degree, wrapped tightly around wrap strip layers using two min 1/2 in. (13 mm) wide by 0.028 in. (0.7 mm) thick stainless steel band clamps with worm gear tightening mechanisms, with clamps located approx 1 in. (25 mm) from each end of wrap strips. Secure collar to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers with one anchor bolt in each anchor tab. As a final step, bend retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

C. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Generous bead of caulk to be applied to outer perimeter of wrap strip at interface with floor or wall surface and to perimeter of pipe at its egress from the wrap strip layers.

3M COMPANY – CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.

D. **Roofing Nails** (Not Shown) – Nom 1-1/4 in. (32 mm) long galv steel roofing nails. When nom 10 in. (254 mm) diam PVC pipe is used, roofing nails driven through steel collar (Item B) into wrap strip layers approx 1 in. (25 mm) from each end of wrap strips and spaced approx 1 in. (25 mm) OC around entire circumference of steel collar at each elevation.

E. **Pipe Covering** – Nom 1 in. (25 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m³) glass fiber units jacketed on the outside with an all service jacket. Min 6 in. (152 mm) length of pipe covering installed around nonmetallic pipe at its egress from steel collar, the underside of floor or on both sides of the wall. Pipe covering secured to pipe with steel wire ties spaced max 4 in. (102 mm) OC. Edge of pipe covering abutting wrap strip to be sealed with a min 1/4 in. (6 mm) diam bead of caulk (Item D). Pipe covering not required on nom 6 in. (152 mm) diam pipe for 2 hr F Rating.

See **Pipe and Equipment Covering – Materials** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a smoke Developed Index of 50 or less may be used.

*Bearing the UL Classification Marking

Copyright © 2011 Underwriters Laboratories Inc.®
1. **Floor or Wall Assembly** – Min 3 in. thick solid lightweight or normal weight (100-150 pcf) concrete. When min thickness of concrete slab (or min concrete topping thickness over crest of corrugated or fluted steel form unit) is 3 in., F Rating of firestop system is 2 h. When min thickness of concrete slab (or min concrete topping thickness over crest of corrugated or fluted steel form unit) is 4-1/2 in., F Rating of firestop system is 3 h. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of circular opening is 8-1/4 in. See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional, Not Shown) – Nom 8 in. diam (or smaller) Schedule 40 (or heavier) steel pipe.

3. **Through-Penetrants** – **Glass Pipe** – Nom 1/2, 3/4, 1, 1-1/2, 2, 3, 4 or 6 in. diam glass drain line or process pipe. Max one glass pipe per opening. Pipe to be rigidly supported on both sides of wall or floor assembly. Pipe couplings to be located min 12 in. from wall or floor surfaces. The annular space between the pipe and the edge of the through opening shall be 3/4 to 1 in. When nom 1-1/2 in. diam glass pipe is used, T Rating is 1 hr. When nom 2 in. to nom 6 in. diam glass pipe is used, T Rating is 0 hr when the piping system is vented (drain pipe) and 1/2 h when the piping system is closed (supply or process pipe).

4. **Firestop System** – Firestop system consists of wrap strips (Item 4B) in conjunction with caulk fill material (Item 4A).
   
   A. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. thickness of caulk applied to the exposed edges of the wrap strip (Item 4B) and to fill all voids between the glass pipe and the periphery of the opening on the top surface of floor assemblies and on both surfaces of wall assemblies. When armored glass process pipe is used, the pipe should be wrapped with a 2 to 3 mil thick pressure-sensitive aluminum foil tape to prevent contact between the caulk material and the armored pipe.

   **3M COMPANY** – Types CP 25WB+ or FB-3000 WT (Note: W Rating applies only when FB-3000 WT is used.)

   B. **Fill, Void or Cavity Material** – **Wrap Strip** – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. wide strips. Nom 2 in. wide strips wrapped around glass pipe (foil side exposed) to fill max 1 in. annular space in circular through opening. Each layer of wrap strip to be installed with butted seam in successive layers staggered. Wrap strip tightly bound with steel wire and slid into through opening such that the top edge of the wrap strip is recessed a max of 1/4 in. from the top surface of the floor assembly. In wall assemblies, the wrap strip on the glass pipe is to be installed in the same manner used for floor assemblies, but it shall be located at the middepth of the through opening in the wall assembly. Min 1/4 in. thickness of caulk (Item 4A) to be applied to the exposed edge(s) of the wrap strip and to fill all voids between the glass pipe and the periphery of the opening on the top surface of floor assemblies and on both sides of the wrap strip in wall assemblies.

   **3M COMPANY** – Type FS-195+

*Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.*
System No. C-AJ-2019
May 09, 2013

F Ratings – 1 and 2 Hr (See Item 3)
T Ratings – 0 and 1/2 Hr (See Item 3)
L Rating At Ambient – Less Than 1 CFM/sq ft
L Rating At 400 F – Less Than 1 CFM/sq ft

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m3) concrete floor or min 5 in. (127 mm) thick reinforced lightweight or normal weight concrete wall. Walls may also be constructed of any UL Classified Concrete Blocks*.

   See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through-Penetrants** – Glass Pipe – Nom 1/2, 3/4, 1, 1-1/2, 2, 3, or 4 in. diam (13, 19, 25, 38, 51, 76 or 102 mm) glass pipe for use in closed (process or supply) piping systems. Pipe to be rigidly supported on both sides of floor or wall assembly. Pipe couplings to be located min 12 in. (305 mm) from floor or wall surfaces. The annular space shall be as shown under Item 3.

   SCHOTT NORTH AMERICA INC – KG-33.

3. **Firestop System** – The F and T Rating of the system is dependent upon annular space, thickness of forming material and thickness of caulk as shown in the table below:

<table>

A. **Packing Material** – Min 4 pcf (64 kg/m3) mineral wool batt insulation firmly packed into opening as a permanent form at the min thickness specified above. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.

B. **Fill, Void or Cavity Material** – Sealant – Min 1/2 in. (13 mm) thickness of fill material applied with the annulus, flush with the top surface of floor and with both surfaces of the wall assembly at the min thickness specified above.

   3M COMPANY – Type FB-1000 NS, FB-1003SL (floors only), FB-2000 or FB-2000+.

System No. C-AJ-2027
August 23, 2004
(Formerly System No. 394)
F Ratings – 2 and 3 Hr. (See Item 3)
T Ratings – 3/4, 2 and 3 Hr. (See Item 3)
L Rating At Ambient – 15 CFM/sq ft
L Rating At 400 F – less than 1 CFM/sq ft
W Rating – Class I (See Item 3)
1. Floor or Wall Assembly – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of circular through opening is 3 in.
   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. Electrical Nonmetallic Tubing++ – Nom 1 in. diam (or smaller) corrugated wall ENT constructed of polyvinyl chloride. ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code. Max one ENT per through opening. ENT to be centered in opening and rigidly supported on both sides of the floor or wall assembly.
   See Electrical Nonmetallic Tubing (FKHU) category in Electrical Construction Materials Directory for names of manufacturers.

2A. Wires++ (Not Shown) – Max No. 12 AWG copper conductor wires with PVC insulation. Wire insulation temperature limitations shall not exceed temperature for which ENT (Item 2) is UL Listed.
   See Wires (ZGZX) category in Electrical Construction Materials Directory for names of manufacturers.

3. Firestop System – The hourly F and T Ratings for the firestop system are dependent upon the firestop configuration. The firestop configuration is dependent upon the size of the annular space between the ENT and the perimeter of the through opening, as tabulated below:

<table>
<thead>
<tr>
<th>Nom ENT Diam In.</th>
<th>Annular Space In.</th>
<th>Firestop Config (a)</th>

</tbody>
</table>

(a) A and B indicate Firestop Configuration, as described in the following:

   **Firestop Configuration A**

A. Fill, Void or Cavity Materials* – Wrap Strip – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. wide strips. One nom 2 in. wide strip tightly-wrapped around ENT (foil side exposed), secured with pressure-sensitive tape or steel wire and slid into through opening such that the top edge is recessed 1/4 in. from top surface of the floor. In wall assemblies the wrap strip layer on the ENT is to be installed in the same manner used for floor assemblies but shall be installed symmetrically on both sides of the wall with the exposed edge of the wrap strip layer recessed 1/4 in. from the wall surface.

   3M COMPANY – FS-195+

B. Fill, Void or Cavity Material* – Caulk or Sealant – In floor assemblies, a nom 1/4 in. depth of caulk is to be applied to the top edge of the wrap strip layer and to fill all gaps at the wrap strip/concrete interface. In wall assemblies, the exposed edge of the wrap strip layer and all gaps at the wrap strip/concrete interface are to be covered with a nom 1/4 in. depth of caulk on both sides of the wall.

   3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant.
   (Note: W Rating applies only when FB-3000 WT sealant is used.)

   **Firestop Configuration B**

A. Forming Material – Polyethylene backer rod used as a permanent form. In floor assemblies backer rod to be friction-fitted into annular space with its top surface recessed min 1 in. from top surface of the floor. In wall assemblies, backer rod to be friction-fitted into annular space on both sides of wall and recessed min 1 in. from wall surface.

B. Fill, Void or Cavity Material* – Caulk or Sealant – Applied to fill annular space to a min depth of 1 in. In floor assemblies, fill material to be installed flush with top surface of floor. In wall assemblies, fill material to be installed flush with wall surface on both sides of wall.

   3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant.
   (Note: W Rating applies only when FB-3000 WT sealant is used.)

++Bearing the UL Listing Mark.

*Bearing the UL Classification Marking.

Copyright © 2010 Underwriters Laboratories Inc.

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening not to exceed 4 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Electrical Nonmetallic Tubing**++ – Nom 1-1/4 in. diam (or smaller) corrugated wall ENT constructed of polyethylene (PE) or nom 2 in. diam (or smaller) corrugated wall ENT constructed of polyvinyl chloride (PVC). ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code. A max of one ENT is allowed in the opening. The ends of the ENT shall be sealed with a min 1/4 in. thickness of moldable putty fill material (Item 4B) unless it is determined that the enclosure in which it terminates is relatively air tight and is normally closed. ENT to be rigidly supported on each side of the floor or wall assembly.

   See Electrical Nonmetallic Tubing (FKHU) category in Electrical Construction Materials Directory for names of manufacturers.

3. **Fiber Optic Cables** – Multiple fiber optical communication cables jacketed with PE or PVC and having a max outside diam of 3/4 in. Max cross-sectional area of fiber optic cables in ENT shall not exceed 40 percent.

4. **Firestop System** – The details of the firestop system shall be as follows:

   **A. Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. wide by 24 in. long strips. Nom 2 in. wide strips tightly-wrapped around ENT (foil side exposed), secured in place with two min 0.062 in. diam (16 gauge) steel tie wires and slid into through opening such that the top edge is recessed 1/4 in. from top surface of the floor. When nom 1-1/4 in. diam (or smaller) ENT is used, a single layer of wrap strip is required. When nom 1-1/2 or 2 in. diam ENT is used, two layers of wrap strip are required. In wall assemblies, wrap strip layer(s) on ENT to be installed in same manner used for floor assemblies but shall be installed symmetrically on both sides of the wall assembly.

   **3M COMPANY – FS-195+**

   **B. Fill, Void or Cavity Materials** – Putty – Moldable putty material applied to fill annular space between wrap strip layer(s) and perimeter of through opening to a min depth of 2 in. with an additional 1/4 in. thickness applied over edge(s) of wrap strip layer(s) flush with top surface of floor and both surfaces of wall.

   **3M COMPANY – MP+ Stix**

---

Note: This system was tested with a pressure differential of 50 Pa between the exposed and unexposed surfaces with the higher pressure on the exposed side.
1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening not to exceed 5 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Electrical Nonmetallic Tubing++** – Nom 1-1/4 in. diam (or smaller) corrugated wall ENT constructed of polyethylene (PE) or nom 2 in. diam (or smaller) corrugated wall ENT constructed of polyvinyl chloride (PVC). ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code. Individual or multiple (three, four or seven ENT of the same size) ENT may be installed in opening. When individual ENT is installed, max annular space between ENT and edge of circular opening shall be 1/4 in. When multiples of three, four or seven ENT of the same size are installed in the opening, max annular space between the tightly-grouped ENT and the edge of the circular opening is 1/2 in. The ends of each ENT shall be sealed with a min 1/4 in. thickness of moldable putty fill material (Item 4B) unless it is determined that the enclosure in which it terminates is relatively air tight and is normally closed. ENT to be rigidly supported on each side of the floor or wall assembly. See Electrical Nonmetallic Tubing (FKHU) category in Electrical Construction Materials Directory for names of manufacturers.

3. **Fiber Optic Cables** – Multiple fiber optical communication cables jacketed with PE or PVC and having a max outside diam of 3/4 in. Max cross-sectional area of fiber optic cables in ENT shall not exceed 40 percent.

4. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. wide by 24 in. long strips. Nom 2 in. wide strips tightly wrapped around individual or tightly-bundled group of ENT (foil side exposed) with the top edges butted against the underside of the concrete floor. Sufficient layers of wrap strip shall be installed to lap a min of 3/16 in. on the concrete around the entire perimeter of the through opening. When a single ENT is installed, a min of one layer of wrap strip is required. When a tightly bundled group of three, four or seven equally sized ENT is installed, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam. Butted seams in successive layers staggered. Wrap strip layers temporarily held in position using tape, wire or equivalent. In wall assemblies, wrap strip is to be installed symmetrically on both sides of the wall. Prior to installation of the wrap strip layer(s), moldable putty fill material (Item B) shall be applied to ENT within the 2 in. depth of the wrap strip layers. See 3M COMPANY – FS-195+

   B. **Fill, Void or Cavity Materials** – Putty – Moldable putty material applied to fill interstices between tightly bundled ENT throughout the 2 in. depth of the wrap strip layers. In floor assemblies, a min 1/4 in. depth of putty shall also be installed in annular space and in interstices between tightly bundled ENT flush with the top surface of the floor. See 3M COMPANY – MP+ Stix

   C. **Steel Collar** – Nom 2 in. deep collar with 1-1/4 wide by 2 in. long anchor tabs and min 3/4 in. tabs to retain wrap strip layers. Coils of precut 0.016 in. thick (No. 30 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. thick (No. 30 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layer with min 1 in. overlap at seam. With steel anchor tabs pressed tightly against floor or wall surface, compress collar around wrap strip layers using a min 1/2 in. wide by 0.028 in. thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. Secure collar to floor or wall surface(s) with min 3/16 in. diam by 1-1/2 in. long steel anchor bolts, or equivalent, in conjunction with 1-1/4 in. diam steel fender
System No. C-AJ-2029 continued

washers. Three anchor bolts, symmetrically located, required for steel collars having an outside diam less than 4-1/2 in. Four anchor bolts, symmetrically located, required for steel collars having an outside diam of 4-1/2 in. to 6 in. As a final step, bend retainer tabs 90 deg toward ENT to lock wrap strip layers in position.

D. **Firestop Device** (Not shown) – As an alternate to Items A and C for individual or bundled ENT, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be approximately sized to closely conform with outside diam of individual or bundled ENT. Max diam of ENT bundle is 4-1/2 in. Firestop device to be installed on underside of floor or on both sides of wall in accordance with the accompanying installation instructions. Moldable putty fill material (Item B) to be installed to fill annular space and interstices between tightly-bundled ENT throughout the 2 in. depth of the firestop device.

**3M COMPANY** – PPD 150, PPD 200, PPD 300, PPD 400

**Note:** This system was tested with a pressure differential of 50 Pa between the exposed and unexposed surfaces with the higher pressure on the exposed side.
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening not to exceed 240 sq in. (1548 sq cm) with max dimension of 30 in. (762 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Electrical Nonmetallic Tubing**++ – Nom 1-1/4 in. (32 mm) diam (or smaller) corrugated wall ENT constructed of polyethylene (PE) or nom 2 in. (51 mm) diam (or smaller) corrugated wall ENT constructed of polyvinyl chloride (PVC). ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code.

   The ends of each ENT shall be sealed with a min 1/4 in. (6 mm) thickness of moldable putty fill material (Item 4B) unless it is determined that the enclosure in which it terminates is relatively air tight and is normally closed. A max of twelve ENT may be installed in the through opening.

   ENT to be rigidly supported on each side of the floor or wall assembly.

   See Electrical Nonmetallic Tubing (FKHU) category in Electrical Construction Materials Directory for names of manufacturers.

3. **Fiber Optic Cables** – Multiple fiber optical communication cables jacketed with PE or PVC and having a max outside diam of 3/4 in. (19 mm) Max cross-sectional area of fiber optic cables in ENT shall not exceed 40 percent.

4. **Firestop System** – The hourly T Rating of the firestop system is dependent upon the firestop orientation (floor or wall) and the firestop configuration, as tabulated below:

   ![](image)

   **Nom ENT Diam (mm)**
   
   **Annular Space (mm)**
   
   **Firestop Config**
   
   **T Rating (Hr)**

   (a) **W = Wall, F = Floor**

   (b) A and B indicate Firestop Configuration, as described in the following.

   **Firestop Configuration A**

   A. **Fill, Void or Cavity Materials*** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. (51 mm) wide by 24 in. (610 mm) long strips. Nom 2 in. (51 mm) wide strip(s) tightly wrapped around ENT (foil side exposed) and secured in place with two min 0.062 in. (1.6 mm) diam steel tie wires. When nom 1-1/4 in. (32 mm) diam (or smaller) ENT is used, a single layer of wrap strip is required. When nom 1-1/2 in. or 2 in. (38 mm or 51 mm) diam ENT is used, two layers of wrap strip are required. Wrap strip layer(s) on ENT to extend approx 7/8 in. (22 mm) into through opening on top surface of floor such that, when intumescent sheet (Item C) is installed, the top edges of the wrap strip layer(s) extend approx 7/8 in. (22 mm) above the top surface of the intumescent sheet.

   3M COMPANY – FS-195+

   B. **Fill, Void or Cavity Materials*** – **Graphite Seal, Caulk, Sealant or Putty** – One layer of 1/2 in. x 1/16 in. (13 mm x 1.6 mm) adhesives backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulik or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Rope of putty or bead of caulik applied to perimeter of wrap strip around ENT at interface with intumescent sheet. Additional putty or caulik applied to cover exposed top edge(s) of wrap strip layer(s) around perimeter of ENT.

   3M COMPANY – E-FIS or Ultra GS seals, CP 25WB+, IC 15WB+ caulik, FB-3000 WT sealant or MP+ Stix putty.
**System No. C-AJ-2030 continued**

C. **Fill, Void or Cavity Materials* – Intumescent Sheet** – Rigid aluminum foil faced sheet with galv sheet steel backer. Diam of circular cutout in sheet to accommodate each ENT to closely follow contour of wrap strip (Item A) on ENT. When more than one ENT is installed in through opening, the min separation between cutouts made in the sheet to accommodate each individual ENT is 2 in. (51 mm). Sheet cut to lap a min of 2 in. (51 mm) on the concrete on all sides of the through opening. Sheet to be installed with the galv sheet steel backer exposed (aluminum foil face against top surface of floor). Sheet secured to top surface of floor using min 3/16 in. (5 mm) diam by 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with 1-1/4 in. (32 mm) diam steel fender washer. Max spacing of fasteners not to exceed 6 in. (152 mm) OC with additional fasteners located on each side of butted seam or slit made to permit installation of the sheet around each ENT.

**3M COMPANY** – CS-195+

D. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (26 gauge) galv steel centered over entire length of seam or slit made in intumescent sheet (Item C) to permit installation about the ENT(s). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metals screws spaced max 2 in. (51 mm) OC on each side of seam or slit.

**Firestop Configuration B (Not Shown)**

A. **Fill, Void or Cavity Materials* – Wrap Strip** – Same as Item A, Firestop Configuration A, except that wrap strip layers are installed on ENT symmetrically on both sides of the floor or wall assembly.

**3M COMPANY** – FS-195+

B. **Fill, Void or Cavity Materials* – Graphite Seal, Caulk, Sealant or Putty** – Same as Item B, Firestop Configuration A, except that seal, caulk or putty is used on both sides of the floor or wall assembly. When MP+ Stix putty is used, T Rating is 1-1/2 hr. When CP 25WB+ caulk or GIS seal is used, T Rating is 2 hr.

**3M COMPANY** – E-FIS or Ultra GS seals, CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty.

C. **Fill, Void or Cavity Materials* – Intumescent Sheet** – Same as Item C, Firestop Configuration A, except that the intumescent sheets are installed symmetrically on both sides of the floor or wall assembly.

**3M COMPANY** – CS-195+

D. **Steel Cover Strip** – Same as Item D, Firestop Configuration A. Steel cover strips required over seams or slits in intumescent sheets (Item C) on both sides of the floor or wall assembly.

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 6400-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of square, rectangular or circular opening is 45 in.² (290 cm²) with max dimension of 9 in. (229 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Nonmetallic Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe in closed (process or supply) or vented (drain, waste or vent) piping systems. One or more pipes may be installed with a min 1/2 in. to max 1 in. (13 mm to 25 mm) clearance maintained between pipes and with a min 1/4 in. to max 1 in. (6 mm to 25 mm) clearance maintained between pipe and sides of through opening. Pipes to be rigidly supported on both sides of floor or wall assembly.

3. **Fill, Void or Cavity Materials* – Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. One nom 2 in. (51 mm) wide strip tightly-wrapped around PVC pipe with the foil side exposed and slid into through opening such that the top edge is flush with top surface of floor. The wrap strip layer shall be secured in place with min No. 18 gauge galv steel tie wire. In wall assemblies, the wrap strip layer is to be installed on the PVC pipe in the same manner used for floor assemblies but shall be installed symmetrically on both sides of the wall.

   **3M COMPANY** – FS-195+

4. **Packing Material** – Min 1 in. (25 mm) thick mineral wool batt insulation firmly packed into opening with its top surface recessed min 1 in. (25 mm) from top surface of the floor. In wall assemblies, forming material to be firmly packed into opening on both sides of wall and recessed min 1 in. (25 mm) from wall surface.

5. **Fill, Void or Cavity Materials* – Caulk or Sealant** – Applied to fill through opening to a min depth of 1 (25 mm) in. In floor assemblies, fill material to be installed flush with top surface of floor. In wall assemblies, fill material to be installed flush with wall surface on both sides of wall.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

System No. C-AJ-2117

November 20, 2009

F Rating – 3 Hr
T Rating – 2 Hr
L Rating at Ambient – 7 CFM/sq ft (See Item 3B)
L Rating at 400 F – 1 CFM/sq ft (See Item 3B)

SECTION A-A

1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Min thickness of solid concrete floor or wall assembly is 4-1/2 in. (114 mm). Wall may also be constructed of any UL Classified **Concrete Blocks**. Diam of opening to be max 1/2 in. (13 mm) larger than diam of nonmetallic pipe (Item 2). Max diam of opening is 5 in. (127 mm).

See **Concrete Blocks** (CZAT) category in Fire Resistance Directory for names of manufacturers.

2. **Nonmetallic Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems or SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. A max of one nonmetallic pipe is permitted in the firestop system. The pipe shall be centered in the through opening. Pipe to be rigidly supported on both sides of wall or floor assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:

   **A. Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) with the top edges butted against the underside of the concrete floor. Sufficient layers of wrap strip shall be installed to lap a min of 3/16 in. (5 mm), on the concrete around the entire perimeter of the through opening. For nom 1/2 in. (13 mm) to nom 1-1/2 in. (38 mm) diam pipes, a min of one layer of wrap strip is required. For nom 2, 2-1/2 and 3 in. (51, 64 and 76 mm) diam pipes, a min of two layers of wrap strip is required. For nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. In wall assemblies, the wrap strip is to be installed in the same manner used for floor assemblies, but it shall be installed symmetrically on both sides of the wall assembly.

   **3M COMPANY** – FS-195+

   **B. Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – (Not Shown) – Generous bead of caulk or putty to be applied to outer perimeter of wrap strip at its interface with floor or wall surfaces(s).

   **3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant, MP+ putty, IC 15WB+ caulk or FireDam 150+ caulk

   (Note: L Ratings apply only when Type CP 25WB+ or FB-3000 WT is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   **C. Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (30 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (30 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. With steel collar anchor tabs pressed tightly against floor or wall surface(s), compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. Secure collar to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long stainless steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Two anchor bolts, symmetrically located, are required for nom 1-1/2 in. (13 mm) to nom 2 in. (51 mm) diam pipes. Three anchor bolts, symmetrically located, are required for nom 3 in. (76 mm) diam pipes. Four anchor bolts, symmetrically located, are required for nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes. A final step, bend retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

   **3M COMPANY** – Types PPD 150, PPD 200, PPD 300, PPD 400.

   *Bearing the UL Classification Mark

Reprinted from the Online Certifications Directory with permission from Underwriters Laboratories Inc.

Copyright © 2011 Underwriters Laboratories Inc.®
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**.

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Sleeve** – Max 8 in. (203 mm) ID (or smaller) Schedule 10 (or heavier) steel pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces.

3. **Through Penetrants** – One nonmetallic pipe installed within one nonmetallic pipe and centered within the firestop system. The space between outer pipe and metallic sleeve shall be min 1/16 in. to max 3/8 in. (1.6 mm to 10 mm). The inner pipe shall be centered within the outer pipe. Nonmetallic spacers shall be used to maintain the inner pipe within the center of the outer pipe at a distance no closer than 10 in. (254 mm) from the bottom of floor surface or both wall surfaces. The nom diam of the inner pipe shall be one half the nom diam of the outer pipe. The outer pipe to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes described in Item A may be used for the outer pipe and the following types and sizes of nonmetallic pipes described in Items B and C may be used for the inner pipe:

   A. **Polypropylene (PP) Pipe** – Nom 4 in., 6 in. or 8 in. (102 mm, 152 mm or 203 mm) diam SDR 32.5 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Polypropylene (PP) Pipe** – Nom 2 in., 3 in. or 4 in. (51 mm, 76 mm or 102 mm) diam SDR 11 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom 2 in. (51 mm) diam SDR 11, or nom 3 in. or 4 in. (76 mm or 102 mm) diam SDR 32.5 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   The T Rating is 1-3/4 Hr when nom 4 in. (102 mm) diam pipe is used as the outer pipe. The T Rating is 2 Hr when nom 6 in. or 8 in. (152 mm or 203 mm) diam pipes are used as the outer pipe.

4. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Strips tightly wrapped around outer nonmetallic pipe (foil side exposed). Multiple stacks of multiple layers to be butted tightly together with the first layer butted tightly against the bottom surface of the floor or both surfaces of the wall. The min number of layers and stacks of layers required is dependent upon the nom diam of the outer pipe, as shown in the following table:

<table>
<thead>
<tr>
<th>Outer Pipe Nom Diam In. (mm)</th>
<th>No. of Wrap Stack</th>
<th>No. of Wrap Strip Layers For 1st Stack</th>
<th>No. of Wrap Strip Layers For 2nd Stack</th>
<th>No. of Wrap Strip Layers For 2nd Stack</th>

**System No. C-AJ-2133 continued**

B. **Foil Tape** – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the last stack of wrap strip (Item 3A). Min of one wrap, flush with the bottom of the next to last stack of wrap strip and proceeding downward. In wall assemblies, the foil shall be installed on both sides of the wall, flush with the next to last stack of wrap strip and proceeding outward.

C. **Steel Collars** – Nom 2 in. (51 mm) deep collars with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1 in. (25 mm) long tabs to retain wrap strip layers. Coils of precut min 016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degrees, wrapped tightly around each stack of wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs for collar over first stack of wrap strip layers to be pressed tightly against floor or wall surface(s), and compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. Collar to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) diam long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Anchor bolts to be used with every anchor tab. Retainer tabs to be bent 90 degrees toward pipe to lock wrap strip layers in position. Anchor tabs for collar over second and third stack (if third stack is required) of wrap strip layers to be pressed tightly against preceding collar and compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. Anchor tabs to be bent 90 degrees outward and then 90 degrees upward, tightly against the preceding collar, and secured to the preceding collar using 1/2 in. (13 mm) long No. 10 sheet metal screws. Anchor screws to be used with every anchor tab. Retainer tabs 90 degrees toward pipe to lock wrap strip layers in position.

D. **Fill, Void or Cavity Materials* – Caulk, Sealant or Putty** – (Not Shown/Not Required) – Generous bead of caulk or putty may be applied to outer perimeter of wrap strip at its interface with floor or wall surface(s).

3M COMPANY – CP 25WB+, IC 15WB+, FireDam 150+ caulk, FB-3000 WT sealant or MP+ Stix putty.

*Bearing the UL Classification Marking

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of opening through floor or wall to be 1/2 to 5/8 in. (13 to 16 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 5 in. (127 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit centered in the through opening. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used.

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Nonmetallic Pipe Coupling** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC pipe coupling or nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe coupling installed such that the top of the coupling is flush with the bottom surface of the floor assembly or flush with either side of the wall assembly and extending outward.

4. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Min four layers of wrap strips tightly wrapped around nonmetallic pipe coupling (foil side exposed) with the top edges butted against the underside of the floor. In wall assemblies, a min four layers of wrap strips tightly wrapped around nonmetallic pipe coupling (foil side exposed) and butted tightly against outer surface of wall. For the pipe or conduit on the side of the wall opposite the pipe coupling, the wrap strips shall be wrapped tightly around the pipe or conduit and butted tightly against outer surface of wall. For nom 1/2 in. (13 mm) to nom 1-1/2 in. (38 mm) diam pipes or conduits, a min of one layer of wrap strip is required. For nom 2, 2-1/2 and 3 in. (51, 64 and 76 mm) diam pipes or conduits, a min of two layers of wrap strip is required. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes or conduits, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam, with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie or equivalent.

      3M COMPANY – FS-195+

   B. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip. Coils of precut min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip with min 1 in. (25 mm) overlap at seam and compressed around wrap strip(s) using a min 1/2 in. (13 mm) wide by min 0.028 in. (0.71 mm) thick stainless steel band at the collar midheight. Collar anchor tabs pressed tightly against floor or wall surface(s) and secured to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts or equivalent in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Min of five anchor bolts used for collar installed around pipe coupling. For the collars installed around pipes or conduits in wall assemblies on the side opposite the pipe coupling, a min of two anchor bolts are required for nom 1/2 to 2 in. (13 to 51 mm) pipes or conduits, a min of three anchor bolts for nom 2-1/2 and 3 in. (64 and 76 mm) pipes or conduits and a min of our anchor bolts for nom 3-1/2 and 4 in. (89 and 102 mm) pipes or conduits, symmetrically located. Retainer tabs bent 90 degrees toward pipe to lock wrap strip(s) in position.
C. Fill, Void or Cavity Materials* – Caulk, Sealant or Putty (Optional, not required) – Bead of caulk or putty may be applied to outer perimeter of steel collar at its interface with floor or wall surface(s). In floor assemblies, a bead of caulk may be used within the annular space on the top side of the floor.

3M COMPANY – CP-WB+ caulk, FB-3000 WT sealant, MP+ Stix putty, IC 15WB+ caulk or FireDam 150+ caulk. (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1778 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Wall may also be constructed of any UL Classified Concrete Blocks*. Opening to be 2 in. (51 mm) larger than the nominal diam of glass pipe (Item 2).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Products** – Glass Pipe – Nom 6 in. (152 mm) diam (or smaller) glass pipe centered in opening, for use in closed (process or supply) or vented (drain, waste or vent) piping systems. Max one pipe per opening. Pipe to be rigidly supported on both sides of wall or floor assembly. Pipe connections to be located a min 3 in. (76 mm) from wall or floor surfaces.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – **Caulk** – Min 1 in. (25 mm) thickness of caulk applied within the annulus, flush with the top surface of the floor or both surfaces of wall.

*Bearing the UL Classification Marking

Reprinted from the Online Certifications Directory with permission from Underwriters Laboratories Inc.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Diam of opening through floor or wall to be 1/2 to 5/8 in. (13 mm to 16 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 3 in. (76 mm).

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used.
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) piping system.
   
   B. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Nom 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation or ceramic (alumina silica) fiber blanket firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or both surfaces of wall as required to accommodate the required thickness fill material.

   B. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

   (Note: W Rating applies only when FB-3000 WT sealant is used. CP 25WB+ not suitable for use with CPVC pipes.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 5 in. (127 mm).

See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed eccentrically within the firestop system. The annular space shall be min 0 in. (0 mm) (point contact) to max 5/8 in. (16 mm) for nom 2 in. (51 mm) diam penetrants and smaller, or min 0 in. (0 mm) (point contact) to max 1/2 in. (13 mm) for penetrants larger than nom 2 in. (51 mm) diam.

Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   D. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   E. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   F. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with bottom surface of floor or both sides of wall. Additional caulk or putty may be applied within annulus, flush with top surface of floor.

   3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant, MP+ Stix putty, IC 15WB+ caulk or FireDam 150+ caulk. (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   B. **Fill, Void or Cavity Material** – Nom 1/4 in. (6 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. For nom 1/2 in. (13 mm) to nom 1 in. (25 mm) diam pipes or conduits, a min of one layer of wrap strip is required. For nom 1-1/2 and 2 in. (38 and 51 mm) diam pipes or conduits, a min of two layers of wrap strip is required. For nom 2-1/2 in. and 3 in. (64 and 76 mm) diam pipes or conduits, a min of three layers of wrap strip is required. For nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes or conduits, a min of four layers of wrap strip is required. The layers of wrap strip to be eccentrically installed such that the layers do not completely encircle the penetrant. The layers are wrapped around the penetrant, foil side exposed, flush with bottom surface of floor such that the ends butt up to the tangent of the periphery of the opening at the point contact location. Layers of wrap strip are held in place with foil tape or steel wire ties.

   3M COMPANY – FS-195+
System No. C-AJ-2189 continued

C. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip. Coils of precut min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strips and penetrant with min 1 in. (25 mm) overlap at seam and compressed around wrap strips and penetrant using a min 1/2 in. (13 mm) wide by min 0.028 in. (0.71 mm) thick stainless steel band at the collar midheight. Collar to be secured to floor or wall surfaces with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Anchor bolts to be symmetrically located opposite the point contact location. A min of two anchor bolts required for nom 1/2 in. (13 mm) to nom 1 in. (25 mm) diam penetrants. A min of three anchor bolts required for nom 1-1/2 in. (38 mm) to nom 2 in. (51 mm) diam penetrants. A min of four anchor bolts required for nom 2-1/2 in. (64 mm) to nom 3 in. (76 mm) diam penetrants. A min of five anchor bolts required for nom 3-1/2 in. (89 mm) to nom 4 in. (102 mm) diam penetrants. Retainer tabs to be bent 90 deg toward pipe to lock wrap strip layers in position.

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 1-1/2 in.
   
   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** – One nonmetallic pipe for use in closed (process or supply) or vented (drain waste or vent) piping systems, centered within the firestop system. Pipe to be rigidly supported on both sides of floor or wall assembly. The following type and size of nonmetallic pipe may be used:
   
   A. Polyethylene/Aluminum/Polyethylene Composite Pressure Pipe (PE-AL-PE) – Nom 1 in. diam (or smaller) PE-AL-PE pipe. The annular space shall be 1/8 in.
   
   B. Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene Composite Pressure Pipe (PEX-AL-PEX) – Nom 1 in. diam (or smaller) PEX-AL-PEX pipe. The annular space shall be 1/8 in.

3. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Packing Material** – Min 4 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Material** – Min 1/2 in. thickness of fill material applied within the annulus, flush with top surface of floor or both surfaces of wall. Additional fill material to be installed such that a min 1/4 in. crown is formed around the penetrating item.

   **3M COMPANY** – FB-2000+ Caulk

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 3 in. (76 mm).
   *See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cross linked Polyethylene (PEX) Tubing** – Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping systems installed either concentrically or eccentrically within the firestop system. The annular space between tubing and periphery of opening shall be min of 0 in. (point contact) to max 1-7/8 in. (0 mm to max 48 mm). Tubing to be rigidly supported on both sides of floor or wall assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the concrete/tubing interface at the point contact location on the top surface of floor or both surfaces of wall.

3M COMPANY – CP 25WB+, IC 15WB+-caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT sealant is used.)

System No. C-AJ-2214  
February 12, 2016  
F Rating — 3 Hr  
T Rating — 1-3/4, 2-1/4, 2-1/2 And 3 Hr (See Item 2)  
W Rating — Class 1 (See Item 3)

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor may also be constructed of any min 8 in. (203 mm) thick UL Classified hollow-core Precast Concrete Units*. Max diam of opening is 7 in. (178 mm). See Concrete Block and Precast Concrete Units (CAZT)(CFTV) categories in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** — (Optional, Not Shown)-Nom 5 in (127 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. For use with nom 4 in. (102 mm) diam (or smaller) pipes or conduits.

T Rating is 1-3/4 when sleeve is used.

2. **Through Penetrants** — One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

A. **Polyvinyl Chloride (PVC) Pipe** — Nom 6 in. (152 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
The details of the firestop system shall be as follows:

**A. Fill, Void or Cavity Materials** — **Caulk, Sealant or Putty** — Min 1/2 in. (13 mm) thickness of caulking or putty may be applied within annular space, flush with bottom of floor or both sides of wall.

3M COMPANY — CP 25WB+ caulk, FB-3000 WT Sealant, MP+ Stix putty, IC 15WB+ caulk or FireDam 150+ caulk

(Note - W Rating applies only when FB-3000 WT is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

**Firestop Configuration A**

A1. Fill, Void or Cavity Materials* — Sealant (Optional, Not Shown) — For floor assemblies, an additional min 1/2 in. (13 mm) thickness of sealant may be applied within the annular space with top surface of floor.

3M COMPANY — FB-1000 NS

**B. Fill, Void or Cavity Materials** — **Wrap Strip** — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of the floor or both surfaces of the wall. The minimum number of layers required is dependent upon the nominal diameter of the pipe. For nom 2 in. (51 mm) diameter (and smaller) pipes, two layers are required. For nom 2-1/2 in. (64 and 76 mm) diameter pipes, three layers are required. For nom 3-1/2 in. (89 and 102 mm) diameter pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

3M COMPANY — Ultra GS

**C. Steel Collar** — Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long bolts to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg. wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against floor or wall surface(s), and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. As an alternate to the band clamp, collars for systems with three or more layers of wrap strip may be fastened together along with No. 6 by 3/8 in. (10 mm) long self-tapping steel screws.

Collar to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diameter by min 1-1/2 in. (38 mm) long steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diameter steel fender washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diameter (and smaller), nom 3 in. (76 mm) diameter (and smaller) and nom 4 in. (102 mm) diameter (and smaller) pipes, respectively.

**Firestop Configuration B**

**B. Fill, Void or Cavity Materials** — **Wrap Strip** — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min four continuous layers of wrap strip tightly wrapped around nonmetallic pipe and butted tightly against the first layers of wrap strip.

3M COMPANY — Ultra GS

**C. Steel Collar** — Two nom 2 in. (51 mm) deep collars with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long bolts to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collars may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collars wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seams, with anchor tabs bent outward 90 deg for upper or inner collars for securement to wall or floor. Anchor tabs for lower or outer collars to overlap onto upper or inner collars. Collars to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at each collar's midheight. An additional min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp to be tightly fastened around collars at the point where anchor tabs of lower or outer collars overlap onto upper or inner collars. As an alternate to the band clamps at each collar's midheight, each collar may be fastened together along the overlapping seam with No. 6 by 3/8 in. (10 mm) long self-tapping steel screws. The additional steel band clamp fastened around collars at the point where anchor tabs of lower or outer collars overlap onto upper or inner collars is still required when collars are fastened together with screws. Upper or inner collars to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diameter by min 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diameter steel fender washers. Min of six anchor bolts, symmetrically located, required.

System No. C-AJ-2216
November 20, 2009
F Rating – 2 Hr
T Rating – 1 Hr
W Rating – Class 1 (See Item 3)

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow core Precast Concrete Units*. Max diam of opening is 5 in. (127 mm)

See Concrete Block (CAZT) and Precast Concrete Units (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   F. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR 11, or nom 4 in. (102 mm) diam (or smaller) SDR 32.5 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 1/2 in. (13 mm) thickness of caulk or putty applied within annular space, flush with bottom of floor or both sides of wall.

   3M COMPANY – CP 25WB+ caulk, FB-3000 WT Sealant, MP+ Stix putty, IC 15WB+ caulk or FireDam 150+ caulk

   (Note: W Rating applies only when FB-3000 WT is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   A1. **Fill, Void or Cavity Materials** – Sealant (Optional, Not Shown) – For floor assemblies, an additional min 1/2 in. (13 mm) thickness of sealant may be applied within the annular space flush with top surface of floor.

   3M COMPANY – FB-1000 NS or FB-3000 WT Sealant

   (Note: W Rating applies when FB-3000 WT or FB-1000 NS is used.)

   B. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of the floor or both surfaces of the wall. The min number of layers required is dependent upon the nom diam of the pipe. For nom 2 in. (51 mm) diam (and smaller) pipes, two layers are required. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes, three layers are required. For nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

   3M COMPANY – Ultra GS
System No. C-AJ-2216 continued

C. **Steel Collar** – Nom 2 in. (51 mm) deep collars with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against floor or wall surface(s), and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. Collar to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam (and smaller) and nom 4 in. (102 mm) diam (and smaller), pipes, respectively.

F Rating – 3 Hr
T Rating – 3 Hr

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor may also be constructed of any min 6 in.(152 mm) thick UL Classified hollow-core Precast Concrete Units*. Max diam of opening is 5 in. (127 mm).

See Concrete Block (CAZT) and Precast Concrete units (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional, Not Shown) – Nom 5 in. (127 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   F. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR 32.5 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop Device** – **Collar** – Collar to be installed in accordance with the accompanying installation instructions. Collar to be installed and latched around pipe and secured to underside of floor or on both sides of wall with 3M Ultra Fast Anchor Straps or with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor straps or anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam and nom 4 in. (102 mm) diam pipes, respectively.

   3M COMPANY – Ultra PPD 1.5, 2.0, 3.0 and 4.0

4. **Fill, Void or Cavity Materials*** – **Caulk, Sealant or Putty** – (Optional, Not Shown) – Min 1/4 in. thickness of caulk or putty applied within annular space, flush with top or bottom of floor on one or both sides of wall.

   3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant, MP+ Stix putty, IC 15WB+ caulk or FireDam 150+ caulk.

   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

5. **Fill, Void or Cavity Materials*** – **Sealant** – (Optional, Not Shown) – For floor assemblies, a min 1/2 in. (13 mm) thickness of sealant may be applied within the annular space flush with top surface of floor.

   3M COMPANY – FB-1000 NS or FB-3000 WT

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classifed **Concrete Blocks**. Max diam of opening is 5 in. (127 mm). See **Concrete Block** (CAZT) and **Precast Concrete units** (CFTV) categories in the Fire Resistance Directory for names of manufacturers. Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete units**.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a non 1/4 in. (6 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   F. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR 32.5 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   T Rating is 1-1/4 Hr for PVC pipes or conduits. T Rating is 3/4 Hr for all other pipes or conduits.

3. **Firestop Device** – **Collar** – Collar to be installed in accordance with the accompanying installation instructions. Collar to be installed and latched around pipe and secured to underside of floor or on both sides of wall with 3M Ultra Fast Anchor Straps or with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor straps or anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam and nom 4 in. (102 mm) diam pipe, respectively.

   **3M COMPANY** – Ultra PPD 1.5, 2.0, 3.0 and 4.0

4. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – (Optional, Not Shown) – Min 1/4 in. (6 mm) thickness of caulk or putty applied within annular space, flush with top or bottom of floor on one or both sides of wall.

   **3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant, MP+ Stix putty, IC 15WB+ caulk or FireDam 150+ caulk.

   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

5. **Fill, Void or Cavity Materials** – **Sealant** (Optional, Not Shown) – For floor assemblies, a min 1/2 in. (13 mm) thickness of sealant may be applied within the annular space flush with top surface of floor.

   **3M COMPANY** – FB-1000 NS or FB-3000 WT

System No. C-AJ-2228
November 20, 2009
F Ratings – 2 and 3 Hr (See Item 3)
T Ratings – 0, 2 and 3 Hr (See Item 2 and 3)
W Rating – Class 1 (See Item 4)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of opening shall be 1 in. (25 mm) larger than nom pipe diam.

   See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly.

   *T Rating is 0 Hr when sleeve is used.*

3. **Through Penetrants** – One nonmetallic pipe or conduit to be installed within opening. The annular space between pipe or conduit and periphery of opening or sleeve and the T Ratings for the pipes when no sleeve is used are dependent on the type of pipe and nom pipe sizes as shown in the table below. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

System No. C-AJ-2228 continued

4. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and secured with two 1/4 in. (6 mm) wide bands of filament tape placed 1/2 in. (13 mm) from bottom and top of wrap strip. The layers of wrap strip and its position within the opening are dependent on the pipe size. For nom 2 in. (51 mm) diam (or smaller) pipes, one layer is required, recessed within the opening 2-1/4 in. (57 mm) from the bottom surface of the floor or both surfaces of the wall. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes, two layers are required, recessed within the opening 1-1/2 in. (38 mm) from the bottom surface of the floor or both surfaces of the wall.

   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** (Optional, Not Shown) – Min 1/4 in. (6 mm) thickness of caulk or sealant applied within annular space, flush with top of floor.

   **3M COMPANY** – Ultra GS

   **3M COMPANY** – CP 25WB+ caulk, FB-3000 WT Sealant, FB-1000 NS sealant, IC 15WB+ caulk or FireDam 150+ caulk.

   (Note: W Rating applies only when FB-3000 WT or FB- 1000 NS is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   *Bearing the UL Classification Marking

   **Bearing the UL Listing Mark**

   Reprinted from the Online Certifications Directory with permission from Underwriters Laboratories Inc.

   Copyright © 2011 Underwriters Laboratories Inc.
1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. For nom 2-1/2 in. (64 mm) diam and smaller pipes and conduits, diam of opening shall be 1/2 in. (13 mm) larger than nom pipe diam. For pipes and conduits greater than nom 2-1/2 in. (64 mm) diam of opening shall be 1 in. (25 mm) larger than nom pipe diam. See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) – Nom 5 in. (127 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly.

3. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom annular space between pipe or conduit and periphery of opening of 1/8 in. (3.2 mm) for nom 2-1/2 in. (64 mm) diam and smaller pipes and conduits and 1/4 in. (6 mm) pipes and conduits greater than nom 2-1/2 in. (64 mm). Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. (6 mm) thickness of caulk applied within annular space, flush with bottom of floor or both sides of wall.
      3M COMPANY – CP 25WB+ caulk, FB-3000 WT Sealant, IC 15WB+ caulk or FireDam 150+ caulk (Note: W Rating applies only when FB-3000 WT is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)
   A1. **Fill, Void or Cavity Materials** – **Sealant** (Optional, Not Shown) – For floor assemblies, an additional min 1/2 in. (13 mm) thickness of sealant may be applied within the annular space flush with top surface of floor.
      3M COMPANY – FB-1000 NS or FB-3000 WT (Note: W Rating applies when FB-3000 WT or FB-1000 NS is used.)
   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of the floor or both surfaces of the wall. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes, two layers are required. For nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes, three layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.
      3M COMPANY – Ultra GS
System No. C-AJ-2241 continued

C. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degree, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against floor or wall surface(s), and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (10 mm) long self-tapping steel screws. Collar to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam (and smaller) and nom 4 in. (102 mm) diam (and smaller), pipes, respectively.

System No. C-AJ-2242
November 20, 2009
F Rating – 2 Hr
T Ratings – 1-3/4 and 2 Hr (See Item 2)
W Rating – Class 1 (See Item 4)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m²) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor may also be constructed of any 6 in. (152 mm) thick UL Classified hollow core Precast Concrete Units*. For nom 2-1/2 in. (64 mm) diam and smaller pipes and conduits, diam of opening shall be 1/2 in. (13 mm) larger than nom pipe diam. For pipes and conduits greater than nom 2-1/2 in. (64 mm) diam of opening shall be 1 in. (25 mm) larger than nom pipe diam.

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional, ) – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. When Steel Sleeve is used, T Rating is 1-3/4 hr.

3. **Through Penetrations** – One nonmetallic pipe or conduit to be centered within opening with a nom annular space between pipe or conduit and periphery of 1/8 in. (3.2 mm) for nom 2-1/2 in. (64 mm) diam and smaller pipes and conduits and 1/4 in. (6 mm) for pipes and conduits greater than nom 2-1/2 in. (64 mm). Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 1/4 in. (6 mm) thickness of caulk applied within annular space, flush with bottom of floor, or both sides of wall.

      3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant, IC 15WB+ caulk, or FireDam 150+ caulk

      (Note: W Rating applies only when FB-3000 WT is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   A1. **Fill, Void or Cavity Materials** – Sealant (Optional, Not Shown) – For floor assemblies, min 1/2 in. (13 mm) thickness of sealant may be applied within the annular space flush with top surface of floor.

      3M COMPANY – FB-1000 NS or FB-3000 WT

      (Note: W Rating applies when FB-3000 WT or FB-1000 NS is used.)

   B. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of the floor or both surfaces of the wall. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes, two layers are required. For nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes, three layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

      3M COMPANY – Ultra GS
C. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degree, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against floor or wall surface(s), and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (10 mm) long self-tapping steel screws. Collar to be secured to floor or wall surface(s) with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam (and smaller) and nom 4 in. (102 mm) diam (and smaller), pipes, respectively.

D. **Firestop Device** – As an alternate to Items 4B and 4C, firestop device to be installed in accordance with the accompanying installation instructions. Firestop device to be installed and latched around pipe and secured to the underside of the floor or both side walls with Ultra Fast Anchor Straps or with 1/4 in. (6 mm) diam by min 1-1/4 in. (32 mm) long steel anchor bolts in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor straps or anchor bolts, symmetrically located, for nom 2, 3 and 4 in. (51, 76 and 102 mm) diam pipes, respectively.

**System No. C-AJ-2255**
November 20, 2009
F Rating – 2 Hr
T Rating – 2 Hr

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6 in. (152 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be a min of 3/8 in. (10 mm) to a max 1-1/8 in. (29 mm). Pipe to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   - **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems

3. **Firestop System** – The firestop system shall consist of the following:
   - **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers recessed 1-1/4 in. (32 mm) below surface of floor. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes, two layers are required. For nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes, three layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.
     - **3M COMPANY** – Ultra GS
   - **Steel Collar** – Nom 2 in. (51 mm) wide collar with 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs removed wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Collar to be compressed around wrap strip layers and secured with min 1/2 in. (13 mm) wide filament tape or foil tape wrapped completely around collar at the mid height of the collar. Wrap strip/collar assembly to be recessed 1-1/4 in. (32 mm) from bottom surface of floor or both surfaces of wall.
     - **3M COMPANY** – CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-1000 NS, FB-3000 WT sealant.
   - **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. (6 mm) thickness of caulk installed in annular space, flush with top surface of the floor or both surfaces of wall.
     - **3M COMPANY** – CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400kg/m³) concrete. Max diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One nonmetallic pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe and the periphery of the opening shall be a min of 3/8 in. to a max 1-1/8 in. (10 mm to max 29 mm) Pipe to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min three continuous layers of wrap strip tightly wrapped around nonmetallic pipe. Wrap strip secured with two 1/2 in. (13 mm) wide bands of filament tape completely wrapped around layers of wrap 1/2 in. (13 mm) from bottom of wrap strips. Wrap strips to be covered with one layer of 2 in. (51 mm) wide min 3 mil thick foil tape and recessed 1-1/4 in. (32 mm) from bottom of floor or both surfaces of wall.
      **3M COMPANY** – Ultra GS
   B. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of caulk installed in annular space, flush with top surface of floor or both surfaces of wall.
      **3M COMPANY** – CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.
      (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units. Max diam of opening is 5 in. (127 mm). See Concrete Blocks and Precast Concrete Units (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be a min of 0 in. (point contact) to a max 1/2 in. (0 mm to max 13 mm). Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Nonmetallic Pipe Coupling** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC pipe coupling or nom 4 in. (102 mm) diam (or smaller) SDR 13.5 CPVC pipe coupling installed such that the top of the coupling is flush with the bottom surface of the floor assembly or flush with either side of the wall assembly and extending outward.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of the floor or both surfaces of the wall. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes, two layers are required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes, three layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.
   B. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in
C. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – In precast hollow-core floor assemblies, a min 1/4 in. (6 mm) thickness of caulk or putty shall be used to fill the annular space on the top side of the floor. An additional 1/4 in. (6 mm) diam bead of caulk or putty shall be applied to the penetrant/concrete interface at the point contact location on the top surface of floor. For solid concrete floors, a bead of caulk or putty may be used to fill the annular space on the top side of the floor as an option (not required). As an option (not required), a bead of caulk or putty may be applied to outer perimeter of steel collar at its interface with floor or wall surfaces.

**3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant or MP+ Stix putty.
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

F Rating – 2 Hr
T Rating – 0 Hr
W Rating – Class I (See Item 3)

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 4 in.
   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed concentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be 1/4 in. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe Pipe** – Nom 3 in. diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit**++ – Nom 3 in. diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials* – Wrap Strip** – Min 1/8 in. thick intumescent material supplied in 2 in. wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and secured with two 1/4 in. wide bands of filament tape placed 1/2 in. from bottom and top of wrap strip. The layers of wrap strip are to be recessed within the opening such that the top of the wrap strip layers is 1/4 in. below top surface of floor. For wall assemblies, wrap strip layers to be installed on both sides of wall and recessed within wall such that the end of the layers is recessed 1/4 in. from both surfaces of wall. For nom 2 in. diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. diam pipes, two layers are required.
   3M COMPANY – Ultra GS
   B. **Fill, Void or Cavity Materials* – Sealant** – Min 1/4 in. thickness of sealant applied within annular space, flush with top surface of floor or both surfaces of wall.
   3M COMPANY – FB-1000 NS, FB-1003 SL or FB-3000 WT sealant.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 3 in. (76 mm).

   See **Concrete Blocks** (CAZT) in Volume 1 of the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 5/8 in. (16 mm).

   Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduit may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) piping systems.

   B. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR11 CPVC pipe for use in closed (process or supply) piping system.

   D. **Acrylonitrile Butadienne Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) piping systems.

   E. **Electrical Nonmetallic Tubing (ENT)** – Nom 1 in. (25 mm) diam (or smaller) ENT installed in accordance with the National Electrical Code (NFPA No. 70).

   See **Rigid Nonmetallic Conduit** (DZKT) and **Electrical Nonmetallic Tubing** (FKHU) categories in the Electrical Construction Equipment Directory for names of manufacturers.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Packing Material** – Min 4 in. (102 mm) thickness of min 4pcf (64 kg/m³) mineral wool batt insulation packed into the opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of caulk.

   A1. **Forming Material** – As an alternate to the packing material in Item 3A, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. Top of forming material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material.

   3M COMPANY – Fire Barrier Packing Material

   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or both surfaces of wall. An additional 1/2 in. (13 mm) diam bead of caulk applied at point contact location between penetrant/floor or penetrant/wall interface.

   3M COMPANY – FireDam 150+, CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant

   (Note: W Rating applies only when FB-3000 WT is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes).

F Rating – 2 Hr
T Rating – 2 Hr

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 9 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between penetrant and periphery of opening shall be min 1/2 in. to max 4 in. Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of pipes or conduit may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   C. **Rigid Nonmetallic Conduit**++ – Nom 4 in. diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electric Code (NFPA No. 70).

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Steel Cover Plate** – Min 18 gauge galv steel cover plate, sized to overlap opening a min of 3 in. on all sides. Opening in plate for penetrant to be sized to the outside diam of penetrant. Plate attached to bottom of floor on both sides of wall with min 3/16 in. by 1-1/4 in. long steel masonry anchors spaced a max of 4 in. OC. Seams in plate covered with min 2 in. wide 28 gauge (or heavier) galv steel and attached to cover plate with No. 10 (or larger) steel screws on each side of seam spaced a max of 3 in. OC.

   B. **Fill, Void or Cavity Materials** – Nom 1/8 in. thick intumescent material supplied in 2 in. wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of cover plate for floors or tightly against cover plate on both surfaces of the wall. For nom 2 in. diam (and smaller) pipes, two layers are required. For nom 2-1/2 in. to 4 in. diam pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

   C. **Steel Collar** – Nom 2 in. deep collar with 1-1/4 in. wide by 2 in. long anchor tabs and min 1/2 in. long tabs to retain wrap strip layers. Coils of precut 0.016 in. thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. overlap at seam. Anchor tabs to be pressed tightly against cover plate, and collar to be compressed around wrap strip layers using a min 1/2 in. wide by 0.028 in. thick stainless steel band clamp at the collar midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along with three No. 6 by 3/8 in. long self-tapping steel screws. Collar to be secured to cover plate with No. 10 (or larger) by min 3/4 in. long steel screws in conjunction with min 1-1/4 in. diam steel washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. diam (and smaller), nom 2-1/2 to 3 in. diam and nom 3-1/2 to 4 in. diam pipes, respectively.

   D. **Packing Material** – Min 2 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be installed on top surface of cover plate, flush with bottom surface of floor or both surfaces of wall.

---

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 10-1/2 in.

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – Two nonmetallic pipes or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between penetrant and periphery of opening shall be min 1/2 in. to max 3-1/2 in. Penetrant to be rigidly supported on both sides of floor or wall assembly. The annular space between penetrants shall be min 1 in. to max 3-1/2 in. One penetrant not to exceed 4 in. diam in size. Other penetrant not to exceed nom 2 in. diam in size. The following types and sizes of pipes or conduit may be used:

A. **Polyvinyl Chloride (PVC) Pipe** – Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

C. **Rigid Nonmetallic Conduit** – Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electric Code (NFPA No. 70).

D. **Acrylonitrile Butadiene (ABS) Pipe** – Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

A. **Steel Cover Plate** – Min 18 gauge galv steel cover plate, sized to overlap opening a min of 3 in. on all sides. Openings in plate for penetrants to be sized to the outside diam of penetrant. Plate attached to bottom of floor or both sides of wall with min 3/16 in. by 1-1/4 in. long steel masonry anchors spaced a max of 4 in. OC. Seams in plate covered with min 2 in. wide 28 gauge (or heavier) galv steel and attached to cover plate with No. 10 (or larger) steel screws on each side of seam spaced a max of 3 in. OC.

B. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. thick intumescent material supplied in 2 in. wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of cover plate for floors or tightly against cover plate on both surfaces of the wall. For nom 2 in. diam (and smaller) pipes, two layers are required. For nom 2-1/2 in. to 4 in. diam pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

**3M COMPANY** – Ultra GS

C. **Steel Collar** – Nom 2 in. deep collar with 1-1/4 in. wide by 2 in. long anchor tabs and min 1/2 in. long tabs to retain wrap strip layers. Coils of precut 0.016 in. thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. overlap at seam. Anchor tabs to be pressed tightly against cover plate, and collar to be compressed around wrap strip layers using a min 1/2 in. wide by 0.028 in. thick stainless steel band clamp at the collar midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along with three No. 6 by 3/8 in. long self-tapping steel screws. Collar to be secured to cover plate with No. 10 (or larger) by min 3/4 in. long steel screws in conjunction with min 1-1/4 in. diam steel washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. diam (and smaller), nom 2-1/2 to 3 in. diam and nom 3-1/2 to 4 in. diam pipes, respectively.

D. **Packing Material** – Min 2 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be installed on top surface of cover plate, flush with bottom surface of floor or both surfaces of wall.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 5 in. (127 mm). See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) or SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. One pipe to be installed concentrically or eccentrically within opening. Annular space between pipe and periphery of opening shall be min 1/2 in. to max 1 in. (13 mm to max 25 mm). Pipe to be rigidly supported on both sides of floor or wall assembly.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of wall. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor.

*3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant. (Note: W Rating applies only when FB-3000 WT sealant is used. CP 25WB+ not suitable for use with CPVC pipes.)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*.
   Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 5 in. (127 mm).
   See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.
2. **Steel Sleeve** (Optional) – Nom 5 in. (127 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces.
3. **Through Penetrants** – One or more nonmetallic pipes, conduits or tubes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening or sleeve shall be min of 1/4 in. to max 2 in. (6 mm to max 51 mm). The space between penetrants shall be min of 1/4 in. to max 2 in. (6 mm to max 51 mm). Penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit**+ – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
4. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall or both ends of sleeve as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or top edge of sleeve or with both surfaces of wall or both ends of sleeves. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor or sleeve. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core concrete.
   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.
   (Note: W Rating applies only when FB-3000 WT sealant is used. CP 25WB+ not suitable for use with CPVC pipes.)
* Bearing the UL Classification Marking

Copyright © 2011 Underwriters Laboratories Inc.®
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. The opening shall be 1 in. (25 mm) larger than the nom diam of penetrant.

   See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (optional, not shown) – Schedule 40 (or heavier) steel sleeve cast or grouted into floor or wall assembly, flush with both surfaces of floor or wall assembly. The nom size of sleeve shall be 1 in. (25 mm) larger than the nom size of through penetrant.

2. **Through Penetrants** – For nom 2 in. (51 mm) diam (or smaller) pipes, one nonmetallic pipe, conduit or tubing to be installed concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of the opening shall be a min of 0 in. (0 mm, point contact) to a max of 5/8 in. (16 mm). For nom 3 in. (76 mm) diam pipes, one nonmetallic pipe, conduit or tubing to be installed concentrically within the firestop system. The annular space between the penetrant and the periphery of the opening shall be 1/4 in. (6 mm). When steel sleeve is used, the annular space between the penetrant and the sleeve shall be a min of 1/4 in. (6 mm) to a max of 3/8 in. (10 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes, conduits or tubing may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   C. **Rigid Nonmetallic Conduit**+ – Nom 3 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 2 in. (51 mm) diam (or smaller) SDR 7.3 or SDR 9 PEX tubing for use in closed (process or supply) piping systems.

   E. **Electrical Nonmetallic Tubing (ENT+)** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall electrical nonmetallic tubing (ENT) constructed of polyvinyl chloride (PVC) and installed in accordance with Article 331 of the National Electrical Code (NFPA No. 70). See Electrical Nonmetallic Tubing (FKHU) category in the Electrical Construction Materials Directory for names of manufacturers.

   F. **Flexible Nonmetallic Conduit, Liquid-Tight** (FNMC)+ – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall flexible nonmetallic conduit, liquid-tight (FNMC) constructed of polyvinyl chloride (PVC) and installed in accordance with Article 351 of the National Electrical Code (NFPA No. 70). See Flexible Nonmetallic Conduit, Liquid-Tight (DXOQ) category in the Electrical Construction Materials Directory for names of manufacturers.

   G. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   H. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. T Rating is 0 Hr when steel sleeve is used. When sleeve is not used and pipe diam is 2 in. (51 mm) or less, T Rating is 2 Hr for penetrants A, B, C, D, E and F. When sleeve is not used and pipe diam is 3 in. (76 mm), T Rating is 3/4 Hr for penetrants A, B and C. T Rating is 0 Hr for penetrants G and H.
3. **Firestop System** – The details of the firestop system shall be as follows:

A. **Packing Material** – (Optional) – Nom 3/8 in. (10 mm) diam polyethylene backer rod or min 3/8 in. (10 mm) thickness of mineral wool batt insulation firmly packed into opening as a permanent form and recessed from both surfaces of floor or wall as required to accommodate the required thickness of fill material.

B. **Fill, Void or Cavity Material** – **Sealant** – For nom 2 in. (51 mm) diam (or smaller) pipes, a min 2 in. (51 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. For nom 3 in. (76 mm) diam pipes, a min 2-1/2 in. (64 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. An additional 1/4 in. (6 mm) bead of sealant applied at the penetrant/concrete interface at point contact location.

  **3M COMPANY – FB-3000 WT**

*Bearing the UL Classification Mark
+Bearing the UL Listing Mark

1. **Floor or Wall Assembly** — Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 56 in.² (363 cm²) with a max dimension of 12-1/2 in. (318 mm) for square devices. Max diam of opening is 2-1/2 in. (64 mm) for 2 in. (51 mm) round devices and 4-1/2 in. (114 mm) for 4 in. (102 mm) round devices. When thickness of floor or wall assembly is less than 4-1/2 in. (114 mm), T Rating is 0 Hr.

   See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** — One or more nonmetallic pipes, conduits or tubes as described in a single line item below, may be installed concentrically or eccentrically within each firestop device (Item 3A) without any limitation on annular space. If multiple through penetrants are installed within the firestop device, the through penetrants may be bundled together. When min thickness of floor or wall assembly is 4-1/2 in. (114 mm), T Rating shall be the lesser of the T Ratings for the penetrants installed. Through penetrants to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of through penetrants may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** — One nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. When PVC pipe is used, T Rating is 1-1/2 hr.
   
   B. **Rigid Nonmetallic Conduit**+ — One nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70). When conduit is used, T Rating is 1-1/2 hr.

   See Rigid Nonmetallic, Schedule 40 and 80 PVC Conduit (DZYR) category in the Electrical Construction Equipment Directory for names of manufacturers.

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — One nom 2 in. (51 mm) diam (or smaller) SDR11 CPVC pipe for use in closed (process or supply) piping systems. When CPVC pipe is used, T Rating is 1-1/2 hr.
   
   D. **Crosslinked Polyethylene (PEX) Tubing** — One nom 2 in. (51 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping systems. When PEX tubing is used, T Rating is 0 hr.
   
   E. **Electrical Nonmetallic Tubing (ENT)**+ — One nom 2 in. (51 mm) diam (or smaller) and max two 1 in. (25 mm) diam (or smaller) ENT installed in accordance with the National Electrical Code (NFPA No. 70). When ENT is used, T Rating is 2 hr.

   See Electrical Nonmetallic Tubing (FKHU) category in the Electrical Construction Equipment Directory for names of manufacturers.

   F. **Optical Fiber/Communications/Signaling/Coaxial Cable Raceways**+ — One nom 2 in. (51 mm) diam (or smaller) and max two 1 in. (25 mm) diam (or smaller) plenum rated raceways installed in accordance with the National Electrical Code (NFPA No. 70). When raceway is used, T Rating is 2 hr.

   G. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — One nom 2 in. (51 mm) diam (or smaller) and max two 1 in. (25 mm) diam (or smaller) plenum rated raceways installed in accordance with the National Electrical Code (NFPA No. 70). When raceway is used, T Rating is 2 hr.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Firestop Device**+ — A max of three square firestop devices may be ganged together. As an alternate, one round device may be centered within a round opening. Each device consists of a nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), 4 by 4 by 10 in. (102 by 102 by 254 mm), 2 in. (52 mm) diam by 10 in. (254 mm) or a 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. In 2-1/2 by 2-1/2 in. (64 by 64 mm) devices, the max nom diam of the through penetrant shall not exceed 1-1/4 in. (32 mm). Firestop device(s) to be centered within opening and installed with ends projecting an equal distance beyond each surface of the floor or wall assembly in accordance with the accompanying installation instructions. The annular space between device(s) and periphery of opening shall be 0 in. (point contact) to max 1/4 in. (6 mm). Firestop device(s)
secured in place by means of fill material (Item 3B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of floor or wall after installation of fill material and secured together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the through penetrant and installed flush with each end of device on both sides of floor or wall assembly.

3M COMPANY — 3M Fire Barrier Pass-Through Device

B. Fill, Void or Cavity Materials* - Putty or Caulk — Min 1 in. (25 mm) thickness of fill material applied within the annulus, flush with top surface of floor or both surfaces of wall prior to the installation of the mounting flanges. When the annular space is 1/8 in. (3.2 mm) or less, the fill material in the annulus is optional. Also, as an option, the foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device. When no fill material is used in the annulus in min 4-1/2 in. (114 mm) thick floors or walls, the T Rating is 1/2 Hr. L Rating applies only when fill material is applied within annulus at interface of floor or both sides of wall and device(s) prior to mounting flanges and with both ends of firestop device(s) filled with nominal 1/8 in. (3.2 mm) of Moldable Putty+.

3M COMPANY — Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT. CP 25WB+ not suitable for use with CPVC pipes.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

+ Bearing the UL Listing Mark
1. **Floor or Wall Assembly** – Min 3-3/4 in. (95 mm) or 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete for 1 and 2 Hr rated assemblies, respectively. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor assembly may also be constructed of any min 6 in. thick UL Classified hollow-core Precast Concrete Units*. The opening shall be 1 in. (25 mm) larger than the nom diam of penetrant.

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (optional) – Schedule 40 (or heavier) steel sleeve cast or grouted into floor or wall assembly, flush with both surfaces of floor or wall assembly. The nom size of sleeve shall be 1 in. (25 mm) larger than the nom size of through-penetrant.

2. **Through-Penetrants** – One nonmetallic pipe, conduit or tubing to be centered within the firestop system installed concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of the opening shall be a min 0 in. (0 mm) (point contact) to a max 5/8 in. (16 mm). When steel sleeve is used, the annular space between the penetrant and the sleeve shall be a min 1/4 in. (6 mm) to a max 3/8 in. (10 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes, conduits or tubing may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 or SDR17 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   C. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 2 in. (51 mm) diam (or smaller) SDR 7.3 tubing for use in closed (process or supply) piping systems or nom 2 in. (51 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Electrical Nonmetallic Tubing (ENT)** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall electrical nonmetallic tubing (ENT) constructed of polyvinyl chloride (PVC) and installed in accordance with Article 331 of the National Electrical Code (NFPA No. 70).

   F. **Flexible Nonmetallic Conduit, Liquid-Tight (FNMC)** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall flexible nonmetallic conduit, liquid-tight (FNMC) constructed of polyvinyl chloride (PVC) and installed in accordance with Article 351 of the National Electrical Code (NFPA No. 70).

   G. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   H. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   T Rating is 0 Hr when steel sleeve is used. When sleeve is not used, T Rating is 1 and 2 Hr for penetrants A, B, C, D, E and F for 1 and 2 Hr rated assemblies, respectively. T Rating is 0 Hr for penetrants G and H.
System No. C-AJ-2626 continued

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Packing Material** – (Optional) Nom 3/8 in. (10 mm) diam polyethylene backer rod or min 3/8 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form and recessed from both surfaces of floor or wall as required to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Material** – **Sealant** – Min 5/8 in. (16 mm) or 1 in. (25 mm) thickness of fill material applied within the annulus, flush with both surfaces of floor or wall for 1 and 2 Hr rated assemblies, respectively. An additional 1/4 in. (6 mm) bead of sealant applied at the penetrant/concrete interface at point contact location.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – FB-3000 WT sealant

1. **Floor or Wall Assembly** – Min 4-1/2 in. (95 mm) or 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. The opening shall be 1 in. (25 mm) larger than the nom diam of penetrant.

See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (optional) – Schedule 40 (or heavier) steel sleeve cast or grouted into floor or wall assembly, flush with both surfaces of floor or wall assembly. The nom size of sleeve shall be 1 in. (25 mm) larger than the nom size of through-penetrant.

2. **Through-Penetrants** – One nonmetallic pipe, conduit or tubing to be installed concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of the opening shall be a min 0 in. (0 mm) (point contact) to a max 5/8 in. (16 mm). When steel sleeve is used, the annular space between the penetrant and the sleeve shall be a min of 1/4 in. (6 mm) to a max of 3/8 in. (10 mm). Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes, conduits or tubing may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 or SDR17 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   C. **Rigid Nonmetallic Conduit+** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 2 in. (51 mm) diam (or smaller) SDR 7.3 or SDR 9 PEX tubing for use in closed (process or supply) piping systems.

   E. **Electrical Nonmetallic Tubing (ENT+)** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall electrical nonmetallic tubing (ENT) constructed of polyvinyl chloride (PVC) and installed in accordance with Article 331 of the National Electrical Code (NFPA No. 70).

   See Electrical Nonmetallic Tubing (FKHU) category in the Electrical Construction Materials Directory for names of manufacturers.

   F. **Flexible Nonmetallic Conduit, Liquid-Tight (FNMC)+** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall flexible nonmetallic conduit, liquid-tight (FNMC) constructed of polyvinyl chloride (PVC) and installed in accordance with Article 351 of the National Electrical Code (NFPA No. 70).

   G. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   H. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   T Rating is 0 Hr when steel sleeve is used. When sleeve is not used, T Rating is 2 Hr for penetrants A, B, C, D, E and F. T Rating is 0 Hr for penetrants G and H.
3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – (Optional) Nom 3/8 in. (10 mm) diam polyethylene backer rod or min 3/8 in. (10 mm) thickness of mineral wool batt insulation firmly packed into opening as a permanent form and recessed from both surfaces of floor or wall as required to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Material** – **Sealant** – Min 2 in. (51 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. An additional 1/4 in. (6 mm) bead of sealant applied at the penetrant/concrete interface at point contact location.

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Max diam of opening is 5 in. (127 mm).

   See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) category in the Fire Resistance Directory for names of manufacturers.

1A. **Floor Assembly (As an alternate to Item 1)** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:

   A. **Concrete** – Min 2 1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete topping, as measured from the top of the steel floor units.

   B. **Steel Floor and Form Units** – Composite or noncomposite 1-1/2, 2 or 3 in. (38, 51 or 76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design. Diam of opening through floor to be 1/2 to 5/8 in. (13 to 16 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed concentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be 1/4 in. (6 mm). Circular opening size must be 1 in. (25 mm) larger than the nominal pipe size. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. (See Item 3C below.)

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems. (See Item 3C below.)

   C. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   D. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   Cellular core PVC pipe (Item 2A) limited to a maximum 2 Hr F Rating.
3. Firestop System — The firestop system shall consist of the following:

A. Fill, Void or Cavity Materials* — Wrap Strip — Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe and secured with the adhesive closure tab. When installed in floors, wrap strip is to be recessed within the opening such that the bottom of the wrap strip layer is min 1/4 in. (6 mm) below the bottom surface of floor. For wall assemblies, wrap strip is to be installed on both sides of wall and installed in the wall such that the wrap strip is extending 5/8 in. (16 mm) from both surfaces of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — Tuck-In Wrap Strip WS 200, WS 300 or WS 400

B. Fill, Void or Cavity Materials* — Caulk or Sealant — Min 1/4 in. (6 mm) thickness of sealant applied within annular space, flush with top surface of floor. When hollow-core Precast concrete units are used, min 1/2 in. (13 mm) thickness of sealant applied within annular space, flush with top and bottom surfaces of floor. Wall assemblies are to have a min 1/4 in. (6 mm) diam bead of sealant applied to concrete or concrete block/wrap strip interface on both sides of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+ Caulk, CP 25WB+ Caulk, or 3000 WT Sealant (CP 25WB+ not suitable for use with CPVC pipes)

C. Foil Tape — (Not Shown) — Required only when CPVC penetrant (Item 2B) is used. Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip. Foil tape is to be positioned such that it will be centered under the wrap strip material with adhesive side out.

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete floor or min 3 in. (76 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of opening shall be 2 in. (51 mm) larger than the nom diam of penetrant (Item 2). See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Deck/Floor Assembly** – (Not Shown) – As an alternate to Item 1, the floor assembly may consist of a fluted steel deck/concrete floor assembly. The floor assembly shall be constructed of the materials and in the manner described in the individual Floor-Ceiling Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Steel Floor and Form Units*** – 1-1/2 to 3 in. (38 to 76 mm) deep galv fluted units.
   B. **Concrete** – Min 2-1/2 in. (64 mm) thick reinforced concrete, as measured from the top plane of the floor units.

2. **Through Penetrants** – Polyvinyl Chloride (PVC) Pipe – One nom 2 in. (51 mm) diam (or smaller) Schedule 80 solid core PVC pipe for use in closed (process or supply) piping systems. Pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe and the periphery of the opening shall be a min of 0 in. (point contact) to a max 1-5/8 in. (41 mm). The pipe to be rigidly supported on both sides of floor or wall.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material*** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. A min 1/2 in. (13 mm) thick bead of the fill material shall be applied at the point of contact of the pipe and the edge of the opening at the top floor surface or both wall surfaces.

*Bearing the UL Classification Mark
1. **Floor Assembly** — The fire rated concrete and steel deck floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series Floor-Ceiling designs in the UL Fire Resistance Directory and as summarized below:

   A. **Concrete** — Min 2 1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete topping, as measured from the top of the steel floor units.

   B. **Steel Floor and Form Units** — Composite or noncomposite 1-1/2, 2 or 3 in. (38, 51 or 76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design. Diam of opening through floor to be 1/2 to 1-1/2 in. (13 to 38 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 6 in. (152 mm).

1A. **Floor or Wall Assembly** — As an alternate to Item 1, min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units**. Diam of opening through floor or wall to be 1/2 to 1-1/2 in. (13 to 38 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 6 in. (152 mm).

See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** — One nonmetallic pipe or conduit to be installed concentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be min 1/4 in. (6 mm) to max 3/4 in. (19 mm). Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems. (See Item 3C below.)

   C. **Fire Retardant Polypropylene (FRPP) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   D. **Rigid Nonmetallic Conduit** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

Solid core PVC pipe (Item 2A) and CPVC pipe (Item 2B) limited to a maximum 2 Hr F Rating.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** — **Wrap Strip** — Nom 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe, secured with the adhesive closure tab, and slid into annular space. When installed in floors, wrap strip is to be recessed within the opening such that the bottom of the wrap strip layer protrudes 1/4 in. (6 mm) below the bottom surface of the floor. For steel deck/concrete floor assemblies, wrap strip is to be recessed within the opening such that the bottom of the wrap strip layer protrudes 1/4 in. (6 mm) below the crest of the fluted steel deck. For wall assemblies, wrap strip is to be installed on both sides of wall and is to protrude 1/4 in. (6 mm) from each surface of wall.

   B. **Fill, Void or Cavity Materials** — **Sealant** — Min 1/2 in. (13 mm) thickness of sealant applied within annular space between wrap strip and edge of opening with a min 1/4 in. (6mm) depth of sealant above top edge of wrap strip in floor assemblies. When hollow-core precast concrete units are used, min 1/2 (13 mm) thickness of sealant applied within annular space, flush with top and bottom surfaces of floor. Wall assemblies are to have a min 1/2 in. (13 mm) depth of sealant applied to fill annular space on each side of wall.

   C. **Foil Tape** — **Foil Tape** — Required only when CPVC penetrant (Item 2B) is used. Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip. Foil tape is to be positioned such that it will be centered under the wrap strip material with adhesive side out.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

++Bearing the UL Listing Mark
UL System No. C-AJ-2648
XHEZ - Through-penetration Firestop Systems

July 12, 2016

F Rating — 2 Hr
T Rating — 0 Hr
W Rating — Class I (See Item 3)
L Rating at Ambient — Less than 1 CFM/sq ft (See Item 3C)
L Rating at 400 F — Less than 1 CFM/sq ft (See Item 3C)

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Max diam of opening is 8 in. (203 mm). Max diam of opening in floors constructed with hollow-core concrete is 7 in. (178 mm).

   See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** — One nonmetallic pipe or conduit to be installed concentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be 11/16 in. (17.5 mm). Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   - **Polyvinyl Chloride (PVC) Pipe** — Nom 6 in. (152 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 6 in. (152 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems. (See Item 3C.)
   - **Fire Retardant Polypropylene (FRPP) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **Rigid Nonmetallic Conduit** — Nom 6 in. (152 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

3. **Firestop System** — The firestop system shall consist of the following:

   - **Fill, Void or Cavity Materials** — **Wrap Strip** — Two layers of min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Two layers of wrap strip tightly wrapped around nonmetallic pipe and secured with either aluminum foil tape or filament tape. When installed in floors, wrap strip is to be installed within the opening such that the top of the wrap strip is min 1/4 in. (6 mm) below the top surface of floor. For Hollow Core floor assemblies, wrap strip is to be recessed such that the bottom edge of the wrap strip extends 1/4 in. (6 mm) from the bottom surface of the floor. For wall assemblies, wrap strip is to be installed on both sides of wall and installed in the wall such that the wrap strip is recessed a min. of 1/4 in. (6 mm) from both surfaces of wall.
UL System No. C-AJ-2648

3M COMPANY 3M FIRE PROTECTION PRODUCTS – Tuck-In Wrap Strip WS Roll

B. Fill, Void or Cavity Materials* – Caulk or Sealant – Min 1/4 in. (6 mm) thickness of sealant applied within annular space, flush with top surface of floor. When hollow-core precast concrete units are used min 1/2 (13 mm) thickness of sealant applied within annular space, flush with top and bottom surfaces of floor. Wall assemblies are to have a min 1/4 in. (6 mm) diam depth of sealant applied to concrete or concrete block/wrap strip interface on both sides of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS – IC 15WB+ Caulk, CP 25WB+ Caulk, or 3000 WT Sealant (CP 25WB+ not suitable for use with CPVC pipes)

C. Foil Tape – (Not Shown) — Required only when CPVC penetrant (Item 2B) is used. Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip. Foil tape is to be positioned such that it will be centered under the wrap strip material with adhesive side out. L Rating does not apply when Foil Tape and CPVC penetrant is used.

(Note: W Rating only applies when FB 3000 WT Sealant is used in floor assembly. W Rating does not apply when CPVC penetrant is used.)

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

System tested with a pressure differential of 2.5 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Max diam of opening 10 in. (254 mm).

2. **Through-Penetrant** – One nonmetallic pipe installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening shall be min 5/8 in. (16 mm) to max 1 in. (25 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:
   - **Polyvinyl Chloride (PVC) Pipe** – Nom 8 in. (203 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 8 in. (203 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems. (See Item 3C.)
   - **Rigid Nonmetallic Conduit+** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

3. **Firestop System** – The firestop system shall consist of the following:
   - **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip. Collar inverted nom 2-1/4 in. (57 mm) into annular space between penetrant and opening to retain wrap strip layers. In floors, one collar is installed from top side of floor. In walls, two collars are installed, one from each side of wall. Every other steel collar anchor tab extending up above floor or beyond surface of wall is bent 90 degree to rest flush against floor or wall surface with min 1/2 in. overlap (13 mm); and remaining anchor tabs are trimmed and bent nom 90 degrees toward penetrant. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel.
   - **Fill, Void or Cavity Materials** – **Wrap Strip** – Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Wrap strip is trimmed to a width of 2 in. (51 mm) and tightly wrapped around pipe in continuous layers and secured with either aluminum foil tape or filament tape. Two layers of 3/16 in. (5 mm) thick by 2 in. (51 mm) wide wrap strip are required. When installed in floors, wrap strip is to be installed within the opening such that the top of the wrap strip is recessed 1/4 in. (6 mm) below the top surface of floor. For wall assemblies, wrap strip is to be installed on both sides of wall such that the wrap strip is recessed 1/4 in. (6 mm) from both surfaces of wall.

System tested with a pressure differential of 2.5 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. **Floor Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete floors or min 3 in. (76 mm) thick reinforced lightweight or normal weight concrete walls. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core *Precast Concrete Units*. Wall may also be constructed of any UL Classified *Concrete Blocks*. Max diam of opening 6 in. (152 mm).

   See *Concrete Blocks* (CAZT) and *Precast Concrete Units* (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – Nom 4 in. (102 mm) diam Green Thread® fiberglass reinforced epoxy pipe with resin corrosion barrier for use in closed (process or supply) or vented (drain, waste or vent) piping system. One pipe installed within the firestop system with an annular space between the pipe and periphery of opening of min 0 in. (point contact) to max 1-1/2 in. (38 mm). Pipe to be rigidly supported on both sides of the floor or wall assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor as required to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Material** – *Foam* – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of wall. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core floor.

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

System tested with a pressure differential of 2.5 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. **Floor Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete floors or min 3 in. (76 mm) thick reinforced lightweight or normal weight concrete walls. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Units***. Max diam of opening 6 in. (152 mm).

   See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – Nom 4 in. (102 mm) diam Z-Core® fiberglass reinforced epoxy pipe with resin corrosion barrier for use in closed (process or supply) or vented (drain, waste or vent) piping system. One pipe installed within the firestop system with an annular space between the pipe and periphery of opening of min 0 in. (point contact) to max 1-1/2 in. (38 mm). Pipe to be rigidly supported on both sides of the floor or wall assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material*** – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of wall. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core floor.

**3M COMPANY** – IC 15WB+ Caulk, CP 25WB+ and FB-3000 WT Sealants

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick floor or min 5 in. thick (152 mm) wall of lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 4-1/2 in. (152 mm).

   See **Concrete Blocks** (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** — One nonmetallic penetrant to be installed within the firestop system. A nom 1/2 in. (13 mm) annular space is required between the penetrant and the periphery of the opening. Penetrant to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of penetrants may be used.

   A. **Crosslinked Polyethylene (PEX) Tubing** — Nom 3 in. (76 mm) diam (or smaller) SDR 9 Uponor AquaPEX tubing for use with closed (process and supply) piping systems.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Packing Material** — Min 1 in. (25 mm) thickness of min 4 pcf (64kg/m³) mineral batt insulation firmly packed into opening as a permanent form. Packing material recessed from top surface of floor or both surfaces of wall to accommodate the required thickness of fill material. In wall assemblies, packing material installed flush with both surfaces of wall.

   B. **Fill, Void or Cavity Materials** — Sealant — Min 3 in. (76 mm) thickness of sealant applied within the annulus, flush with the top surface of the floor. In wall assemblies, fill material centered in opening and recessed from each surface to accommodate the required thickness of packing material.

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick floor or min 5 in. thick (152 mm) wall of lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6-1/2 in. (165 mm).

   See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

   1A. **Steel Sleeve** — Nom 6 in. (152 mm) diam (or smaller) Schedule 10 steel sleeve. Steel to extend a min 2-1/2 in. (64 mm) beyond top surface of floor and both surfaces of wall.

2. **Electrical Nonmetallic Tubing**+ — Three, nominal 2 in. (51 mm) diameter (or smaller) electrical nonmetallic tubing (ENT) constructed of polyvinyl chloride (PVC) or polyethylene (PE). ENT to be installed in accordance with Article No. 331 of the National Electrical Code (NFPA 70). The space between ENT’s shall be a min 1/4 in. (6.4 mm) to a max 1/2 in. (13 mm). The annular space between the ENT and the periphery of the opening shall be a min of point contact to a max 3/4 in. (19 mm). Penetrant to be rigidly supported on both sides of the floor or wall assembly.

   See Electrical Nonmetallic Tubing (FKHU) category in the Electrical Construction Materials Directory for names of manufacturers.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Packing Material** — Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m3) mineral batt insulation firmly packed into opening as a permanent form. Packing material recessed from surface of floor or both surfaces of wall to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Materials*** — Sealant — In floors, min 2 in. (51 mm) thickness of sealant applied within the annulus, flush with the top surface of the steel sleeve. In walls, min 2 in. (51 mm) thickness of sealant applied within the annulus, flush with both ends of steel sleeve.

   **3M COMPANY** — FB-3000 WT Sealant

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight normal weight concrete (100-150 pcf or 1600-2400 kg/m³) floor or min 5-1/2 in. (140 mm) thick reinforced lightweight normal weight concrete (100-150 pcf or 1600-2400 kg/m³) wall. Wall may also be constructed of any UL Classified **Concrete Block**. Max diam of opening is 4 in. (102 mm).

   See **Concrete Blocks** category in the Fire Resistance Directory for names of manufacturers

2. **Nonmetallic Pipe** — One nonmetallic pipe to be installed concentrically or eccentrically within the firestop system. The annular space shall be min 1/4 in. (6 mm) to max 1 3/8 in (35 mm). Pipe to be rigidly supported on both sides of floor and wall assembly.

   A. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 2 in. (51 mm) diam (or smaller) SDR 11 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems.

   B. **Polyvinyl Chloride (PVC) Pipe** — Nom 2 in. (51 mm) diam (or smaller) cellular or solid core Schedule 40 PVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Packing Material** — Min 3-1/2 in. (89 mm) of min 4 pcf (64 kg/m³) mineral wool insulation firmly packed into opening as a permanent form. Packing material to be recessed from bottom surface of floor or both surfaces of wall to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Material**

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC-15WB+ Caulk, CP25WB+ Caulk or FB 3000WT Sealant

   (Note: CP 25WB+ Caulk not suitable for use with CPVC pipes.)

XHEZ - Through-penetration Firestop Systems
July 30, 2015
F Rating — 2 Hr
T Rating — 0 Hr
W Rating — Class 1 (See Item 4)

1. Floor or Wall Assembly — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1778 - 2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 5 in. (127 mm).

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. Steel Sleeve — (Optional) - Nom 5 in. (127 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces.

3. Through-Penetrants — One nonmetallic pipe, conduit or tube installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening or sleeve shall be min of 1/4 in. (6 mm) to max 2 in. (51 mm). The space between penetrant shall be min of 1/4 in. (6 mm) to max 2 in. (51 mm). Penetrant to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of penetrants may be used:

   A. Polyvinyl Chloride (PVC) Pipe — Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. Rigid Nonmetallic Conduit+ — Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. Chlorinated Polyvinyl Chloride (CPVC) Pipe — Nom 2 in. (51 mm) diam (or smaller) SDR 13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. Crosslinked Polyethylene (PEX) Tubing — Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. Firestop System — The details of the firestop system shall be as follows:

   A. Packing Material — Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall or both ends of sleeve as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.

   B. Fill, Void or Cavity Materials* - Caulk or Sealant — Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or top edge of sleeve or with both surfaces of wall or both ends of sleeves. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor or sleeve. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core concrete.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant
(Note - W Rating applies only when FB-3000 WT is used. CP 25WB+ not suitable for use with CPVC pipes.)

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m^3) concrete floor or min 5 in. (127 mm) thick reinforced lightweight or normal weight concrete wall. Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow core **Precast Concrete Units**. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 6 in. (152 mm).

2. **Through Penetrants** — One nonmetallic pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between pipe or conduit and periphery of the opening shall be min 1/4 in. (6 mm) to max 3/4 in. (19 mm). Pipe to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes may be used:

   A. **Polypropylene (PP-RCT) Pipe** — Nom 4 in. (125 mm OD) diam Polystar™ CT-White SDR 11 PP pipe for use in closed (process or supply) piping systems.

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** — **Wrap Strip** — Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strip. Wrap strip is tightly wrapped around pipe in one continuous layer and secured with filament tape. When installed in floors, wrap strip is to be installed within the opening such that the top of the wrap strip is recessed 1/4 in. (6 mm) below the top surface of floor. For wall assemblies, wrap strip is to be installed on both sides of wall such that the wrap strip is recessed 1/4 in. (6 mm) from both surfaces of wall.

   B. **Packing Material** — Min 4 in. (102 mm) thickness of min 4 pcf (64 kg/m^3) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or both surfaces of wall assembly to accommodate the required thickness of fill material.

   C. **Forming Material** — As an alternate to the packing material in Item 3B, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. Top of forming material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of fill material.

   D. **Sealant** — Min 1/2 in. (13 mm) thickness of fill material applied within the annulus at top surface of floor or both surfaces of wall and smoothed over to lap onto floor or wall surfaces around the periphery of opening. In hollow-core floors, sealant to be applied at top and bottom surface of floor.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** — Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units**. Max diam of opening is 7 in. (178 mm).

See Concrete Blocks and Precast Concrete Units (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** — One nonmetallic pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of the opening shall be a min of 0 in. (point contact) to a max 1/4 in. (6 mm). Penetrant to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic penetrants may be used:

   **A. High Density Polyethylene (HDPE) Pipe** — Nom 6 in. (152 mm) diam (or smaller) SDR11 HDPE pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems piping systems.

3. **Firestop System** — The firestop system shall consist of the following:

   **A. Fill, Void or Cavity Material** — Wrap Strip — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around the outer circumference of the nonmetallic pipe and butted tightly against the bottom surface of the floor or both surfaces of the wall. Two stacks of four layers of wrap strip shall be used. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. 3M COMPANY 3M FIRE PROTECTION PRODUCTS — Ultra GS

   **B. Steel Collars** — Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. One steel collar is wrapped tightly around each stack of wrap strip layers with min 1 in. (25 mm) collar overlap at seam. Collar nearest floor or wall is secured to bottom surface of the floor, or both surfaces of wall. Two stacks of four layers of wrap strip shall be used. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

   **C. Fill, Void or Cavity Material** — Sealant — A min 1/2 in. (13 mm) bead of sealant shall be applied to the collar/concrete interface at bottom surface of floor or both surfaces of wall. In addition, in floors, min 1/2 in. (13 mm) thickness of sealant applied within the annulus flush with top surface of floor. 3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+ Sealant, CP 25WB+ Sealant or FB-3000 WT Sealant

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** — Min 4-1/2 in. (64 mm) thick floor, or min 5 in. (127 mm) thick wall, constructed of reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6-1/2 in. (165 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** — One nonmetallic pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of the opening shall be a min of 1/2 in. (13 mm) to a max 1-1/2 in. (38 mm). Penetrant to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic penetrants may be used:

A. **High Density Polyethylene (HDPE) Pipe** — Nom 4 in. (102 mm) diam (or smaller) SDR11 HDPE pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems piping systems.

3. **Firestop System** — The firestop system shall consist of the following:

A. **Fill, Void or Cavity Materials** — **Wrap Strip** — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around the outer circumference of the nonmetallic pipe with top edge recessed 1/4 in from top surface of floor or both surfaces of wall. The number of layers of wrap strip required is dependent on pipe diam and type of piping system (open or closed) as shown in Table below. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

B. **Packing Material** — Min 4 in. (102 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material.

C. **Fill, Void or Cavity Material** — **Sealant** — Min 1/2 in. (13 mm) thickness of sealant shall be applied within the annulus, flush with top surface of floor or both surfaces of wall.

**3M COMPANY 3M FIRE PROTECTION PRODUCTS** — CP 25WB+ Sealant or FB-3000 WT Sealant

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor or Wall Assembly** – Min 5-1/2 in. (140 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Floor may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Max diam of opening is 5 in. (127 mm).

See Concrete Blocks (CAZT) and Precast Concrete units (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and the periphery of the opening shall be a min 0 in. (point contact) to a max 1/2 in. (0 mm to max 13 mm) Pipe to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit++** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   F. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop Device – Collar** – Collar to be installed in accordance with the accompanying installation instructions. Collar to be installed and latched around pipe and secured to bottom of floor or both sides of wall with min 3/16 in. (5 mm) diam by min 1-1/4 in. (32 mm) long steel masonry fasteners in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four fasteners, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam and nom 4 in. (102 mm) diam pipes, respectively.

   3M COMPANY – Ultra PPD 1.5, 2.0, 3.0 and 4.0

4. **Fill, Void or Cavity Materials* – Caulk, Sealant or Putty (Optional, Not Shown)** – Min 1/4 in. (6 mm) thickness of caulk or putty applied within annular space, flush with top or bottom of floor or both sides of wall.

   3M COMPANY – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty.

   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

*Bearing the UL Classification Mark
++Bearing the UL Listing Mark

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor or Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Diam of opening through floor or wall to be 1/2 to 5/8 in. (13 to 16 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 3 in. (76 mm).

See **Concrete Block** (CAZT) and **Precast Concrete Units** (CFTV) categories in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) piping system.
   B. **Rigid Nonmetallic Conduit+** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Packing Material** – Nom 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation or ceramic (alumina silica) fiber blanket firmly packed into opening as a permanent form on both sides of floor and wall. Packing material to be recessed from both surfaces of floor or wall as required to accommodate the required thickness fill material.
   B. **Fill, Void or Cavity Material* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with both surfaces of floor or wall.

   **3M COMPANY** – CP 25WB+, IC 15WB+ or FB-3000 WT sealant
   (Note: W Rating applies only when FB-3000 WT is used. CP 25WB+ not suitable for use with CPVC pipes.)

*Bearing the UL Classification Mark

Reprinted from the Online Certifications Directory with permission from UL © 2013 UL LLC
1. **Floor-Ceiling Assembly** – The fire-rated unprotected steel deck Floor-Ceiling assembly shall be constructed of the materials and in the manner specified in the individual D900 Series Designs in the UL Fire Resistance Directory and as summarized below:

   A. **Normal Weight or Lightweight Concrete** – Normal weight concrete with carbonate or siliceous aggregate, 145 to 155 pcf or 2300-2500 kg/m³ unit weight, min 3000 psi (210 kg/m²) compressive strength. Lightweight concrete with expanded shale, clay or slate aggregate, 105 to 115 pcf or 1700-1850 kg/m³ unit weight, min 3000 psi compressive strength.

   B. **Welded Wire Fabric** – 6x6-W1.4xW1.4.

   C. **Steel Floor and Form Units** – Composite or noncomposite 1-1/2, 2 or 3 in. (38, 51, or 76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

      Max diam of opening core-drilled through floor assembly is 9 in. (229 mm).

2. **Nonmetallic Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 flame retardant polypropylene (FRPP) pipe or nom 8 in. (203 mm) diam (or smaller) Schedule 40 solid core polyvinyl chloride (PVC) pipe or nom 8 in. (203 mm) diam (or smaller) Schedule 40 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. Diam of circular opening core-drilled through Floor-Ceiling assembly to be no greater than 1/2 in. (13 mm) larger than outside diam of pipe. Pipe to be centered in through opening and rigidly supported on both sides of floor assembly.
System No. F-A-2002 continued

3. **Firestop System** – The hourly F and T Ratings for the firestop system are dependent upon the type and thickness of the concrete topping over the fluted steel floor units, the type and size of the nonmetallic pipe and the firestop configuration, as tabulated below:

(a) NW denotes normal weight concrete, LW denotes lightweight concrete.
(b) A, B and C indicate firestop configuration, as described in the following:

**Firestop Configuration A**

A. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Width of sheet to be min 6 in. (152 mm) greater than outside diam of nonmetallic pipe. Length of sheet (transverse to steel floor unit direction) to extend to steel floor unit valley beyond each side of core-drilled hole with a min lap of 1-1/2 in. (38 mm) on the steel floor unit valley at each end. Circular cutout in sheet to tightly follow circumference of nonmetallic pipe with side edges of sheet at least 3 in. (76 mm) from circular cutout on all sides. Slat made in sheet to permit installation around the nonmetallic pipe to be located at end of sheet beneath steel floor unit valley nearest to the circular cutout. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil face against steel floor unit). Sheet secured to valleys of steel floor unit using min 3/16 in. diam by 1-1/2 in. (5 mm by 38 mm) long steel expansion bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Fasteners to be located approx 1 in. (25 mm) from edges of sheet at each corner, at each sheet/valley intersection and at both sides of slit made to permit installation around nonmetallic pipe. Spacing of fasteners at ends of sheet not to exceed 6 in. (152 mm) OC.

**3M COMPANY – CS-195+**

B. **Packing Material** – Mineral wool batt insulation having a min density of 6 pcf (96 kg/m³), firmly packed into flutes of steel floor units above intumescent sheet (Item 3A) to completely fill cavities.

C. **Fill, Void or Cavity Materials** – **Putty** – Moldable putty material supplied in nom 1/8 in. (3.2 mm) thick sheets. Min 1/8 in. (3.2 mm) thick sheet of putty material applied over packing material (Item B) at edges of intumescent sheet to completely cover packing material in steel floor unit flutes. Additional putty material kneaded by hand and packed into annular space between nonmetallic pipe and edge of core-drilled hole at top surface of concrete floor.

**3M COMPANY – MP+ Stix**

D. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide by 24 in. (610 mm) long strips. Nom 2 in. (51 mm) wide strips tightly-wrapped around nonmetallic pipe (foil side exposed) with the top edges butted against the underside of the intumescent sheet. Sufficient layers of wrap strip shall be installed to lap a min of 3/16 in. (5 mm) on the intumescent sheet surface around the entire circumference of the nonmetallic pipe. For nom 1/2 in. to nom 2 in. (13 mm to nom 51 mm) diam pipes, a min of one layer of wrap strip is required. For nom 2-1/2 in. and nom 3 in. (64 mm to nom 76 mm) diam pipes, a min of two layers of wrap strip are required. For nom 3-1/2 in. and nom 4 in. (89 mm to nom 102 mm) diam pipes, a min of three layers of wrap strip are required. Each layer of wrap strip to be installed with butted seam, with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, filament tape, steel wire tie, or equivalent.

**3M COMPANY – FS-195+**

E. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (30 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (30 gauge) galv sheet in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with top 1 in. (25 mm) overlap at seam. With steel collar anchor tabs pressed tightly against underside of intumescent sheet, compress collar around wrap strip layers using a min 1 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. Beneath valleys of steel floor units, anchor tabs of collar secured to intumescent sheet with min 3/16 in. (5 mm) diam by 1-1/2 in. (38 mm) long steel anchor bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Away from valleys, anchor tabs of collar secured to intumescent sheet with No. 10 steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Three anchor bolts, symmetrically located, required for nom 2 and 3 in. (51 mm and 76 mm) diam pipes. Four anchor bolts, symmetrically located, required for nom 4 in. (102 mm) diam pipes. As a final step, bend retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

**3M COMPANY – CP 25WB+ or CAulk or FB-3000 WT sealant. (Note: CP 25WB+ not suitable for use with CPVC pipes.)**

System No. F-A-2002 continued

G. **Firestop Device** (Not Shown) – As an alternate to Items D, E and F for nom 1-1/2, 2, 3 or 4 in. (38, 51, 76 or 102 mm) diam nonmetallic pipes, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of intumescent sheet (Item A) in accordance with the accompanying installation instructions.

3M COMPANY – PPD 150, PPD 200, PPD 300, PPD 400

**Firestop Configuration B**

A. **Fill, Void or Cavity Materials** – *Intumescent Sheet* – Same as Firestop Configuration A.
B. **Packing Material** – Same as Firestop Configuration A.
C. **Fill, Void or Cavity Materials** – *Putty* – Same as Firestop Configuration A.
D. **Fill, Void or Cavity Materials** – *Wrap Strip* – Same as Firestop Configuration A.
E. **Steel Collar** – Same as Firestop Configuration A.
F. **Fill, Void or Cavity Materials** – *Caulk or Sealant* – Same as Firestop Configuration A.

3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant.

(Note: CP 25WB+ not suitable for use with CPVC pipes.)

G. **Pipe Covering** – Nom 1 in. (25 mm) thick hollow cylindrical heavy (min 3.5pcf or 56 kg/m³) density glass fiber units jacketed on the outside with an all service jacket. Nom 6 in. (152 mm) length of pipe covering installed around nonmetallic pipe, with top edge abutting steel collar, and secured to pipe with No. 16 gauge steel tie wires located 1 in. (25 mm) from each edge.

See **Pipe and Equipment Covering** – *Materials* (BRGU) category in Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

**Firestop Device** (Not Shown) – As an alternate to Items D, E and F for nom 1-1/2, 2, 3 or 4 in. (38, 51, 76 or 102 mm) diam nonmetallic pipes, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of intumescent sheet (Item A) in accordance with the accompanying installation instructions.

3M COMPANY – PPD 150, PPD 200, PPD 300, PPD 400

**Firestop Configuration C**

A. **Fill, Void or Cavity Materials** – *Intumescent Sheet* – Same as Firestop Configuration A.
B. **Packing Material** – Same as Firestop Configuration A.
C. **Fill, Void or Cavity Materials** – *Putty* – Same as Firestop Configuration A.
D. **Fill, Void or Cavity Materials** – *Wrap Strip* – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 4 in. (102 mm) wide by 24 in. (610 mm) long strips. Nom 4 in. (102 mm) wide strips tightly-wrapped around nonmetallic pipe with the top edges butted against the intumescent sheet. For nom 6 in. (152 mm) diam pipes, three layers of wrap strip are required. For nom 8 in. (203 mm) diam pipes, four layers of wrap strip are required. Each layer of wrap strip to be installed with butted seam with butted seams in successive layers staggered. Wrap strips temporarily held in position using aluminum foil tape, filament tape, steel wire tie, or equivalent.

3M COMPANY – FS-195+

E. **Steel Collar** – Nom 4 in. (114 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (No. 30 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (No. 30 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers using two min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamps with worm gear tightening mechanisms, with the clamps located near the quarter points of the wrap strips. Beneath valleys of steel floor units, anchor tabs of collar secured to intumescent sheet with min 3/16 in. (5 mm) diam by 1-1/2 in. (38 mm) long steel anchor bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Away from valleys, anchor tabs of collar secured to intumescent sheet with No. 10 steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Seven anchor bolts, symmetrically located, required for nom 6 in. (152 mm) diam pipes. Nine anchor bolts, symmetrically located, required for nom 8 in. (203 mm) diam pipes. As a final step, bend retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

F. **Fill, Void or Cavity Materials** – *Caulk or Sealant* – Same as Firestop Configuration A.

3M COMPANY – CP 25WB+ caulk or FB-3000 WT sealant. (Note: CP 25WB+ not suitable for use with CPVC pipes.)

G. **Pipe Covering** – Same as Firestop Configuration B.

   B. **Welded Wire Fabric** – 6x6-W1.4xW1.4

   C. **Steel Floor and Form Units** – Composite or noncomposite 1-1/2, 2 or 3 in. deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Nonmetallic Pipe** – Nom 6 in. diam Schedule 40 flame retardant polypropylene (FRPP) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. Pipe to be centered in nom 7 in. diam core-drilled through opening and rigidly supported on both sides of floor assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv steel sheet backer. Width of sheet to be min 13 in. Length of sheet (transverse to steel floor unit direction) to extend to steel floor unit valley beyond each side of core-drilled
hole with a min lap of 1-1/2 in. on the steel floor unit valley at each end. Circular cutout in sheet to tightly follow circumference of nonmetallic pipe with side edges of sheet at least 3 in. from circular cutout on all sides. Slit made in sheet to permit installation around the nonmetallic pipe to be located at end of sheet beneath steel floor unit valley nearest to the circular cutout. Sheet to be installed with the galv sheet backer exposed (aluminum foil face against steel floor unit). Sheet secured to valleys of steel floor unit using min 3/16 in. diam by 1-1/2 in. long steel expansion bolts, or equivalent, in conjunction with min 1-1/4 in. diam steel fender washers. Fasteners to be located approx 1 in. from edges of sheet at each corner, at each sheet/valley intersection and at both sides of slit made to permit installation around nonmetallic pipe. Spacing of fasteners at ends of sheet not exceed 6 in. OC.

3M COMPANY – CS-195+

B. **Packing Material** – Mineral wool batt insulation having a min density of 6 pcf, firmly packed into flutes of steel floor units above intumescent sheet (Item 3A) to completely fill cavities.

C. **Fill, Void or Cavity Material** – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. wide by 24 in. long strips. Three stacks of nom 2 in. wide wrap strips tightly-wrapped around nonmetallic pipe in a “telescope” fashion with four, three and two layers of wrap strip installed in the top, middle and bottom stacks, respectively. Each layer of wrap strip is to be installed with butted seams in successive layers staggered. Wrap strip stacks to be tightly-butted against each other and against intumescent sheet (Item 3A). Wrap strips temporarily held in position using aluminum foil tape, filament tape, steel wire tie, or equivalent. Wrap strips secured in position with steel collars (Item 3E).

3M COMPANY – MPP, MP+, Stix

D. **Fill, Void or Cavity Material** – **Wrap Strip** – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. wide by 24 in. long strips. Three stacks of nom 2 in. wide wrap strips tightly-wrapped around nonmetallic pipe in a “telescope” fashion with four, three and two layers of wrap strip installed in the top, middle and bottom stacks, respectively. Each layer of wrap strip is to be installed with butted seams in successive layers staggered. Wrap strip stacks to be tightly-butted against each other and against intumescent sheet (Item 3A). Wrap strips temporarily held in position using aluminum foil tape, filament tape, steel wire tie, or equivalent. Wrap strips secured in position with steel collars (Item 3E).

3M COMPANY – FS-195+

E. **Steel Collar** – Nom 2 in. deep collar with 1/4 in. wide by 2 in. long anchor tabs and 3/4 in. long tabs to retain wrap strip layers. Coils of precut min 0.016 in. thick (No. 30 gauge) galv sheet steel available from wrap strip manufacturer. After installing three two-layer stacks of wrap strip (Item 3D), a steel collar with two out of every three anchor tabs cut off is to be installed around the bottom stack of wrap strip with the remaining anchor tabs extending onto the middle stack of wrap strip. After securing the steel collar around the bottom stack of wrap strip with a stainless steel band clamp (Item 3C) and bending the retainer tabs 90 degrees, the third layer of wrap strip is to be installed around the middle and top stacks of wrap strip such that the remaining anchor tabs of the steel collar on the bottom stack of wrap strip are covered. A second steel collar with two out of three anchor tabs cut off is to be installed around the middle stack of wrap strip with the remaining anchor tabs extending onto the top stack of wrap strip. After securing the steel collar around the middle stack of wrap strip with a stainless steel band clamp and bending the retainer tabs 90 degrees, the fourth layer of wrap strip is to be installed around the top stack of wrap strip such that the remaining anchor tabs of the steel collar on the middle stack are covered. A third steel collar with the anchor tabs bent outward 90 degrees is to be installed around the top stack of wrap strip. After securing the steel collar around the top stack of wrap strip with a stainless steel band clamp and bending the retainer tabs 90 degrees, the top steel collar is to be secured to the intumescent sheet. Where the anchor tabs of the top steel collar are beneath the valley of the steel deck, the anchor tabs are to be secured with 1/4 in. diam by min 1-1/2. long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. diam steel fender washers with one anchor bolt in each anchor tab. Where the anchor tabs of the top steel collar are beneath the crest of the steel deck, the anchor tabs are to be secured with No. 10 by min 1/2 in. long self-drilling, self-tapping steel screws. The three steel collars are to be mechanically interlocked using steel screws (Item 3G).

3M COMPANY – CS-195+

F. **Band Clamp** – Min 1/2 in. wide by 0.028 in. thick stainless steel band clamp with worm gear tightening mechanism. One band clamp to be tightly-secured around each steel collar at the approximate midheight of each stack of wrap strips.

3M COMPANY – CS-195+

G. **Steel Screws** (Not Shown) – No. 10 by 1/2 in. long self-drilling, self-tapping hex-head steel screws. Screws to be driven through steel collars on middle and top stacks of wrap strip layers to interlock with anchor tabs of steel collars on bottom and middle stacks of wrap strip layers, respectively.

1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 3 in. (76 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.
   B. **Welded Wire Fabric** – 6x6-W1.4xW1.4.
   C. **Steel Floor and Form Units** – Composite or noncomposite 1-1/2 in. (38 mm) deep fluted galv units as specified in the individual Floor-Ceiling design. Diam of opening through floor to be 1/2 in. to 5/8 in. (13 mm to 16 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the opening. Pipe to be rigidly supported on both sides of floor assembly. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Metal Plate Enclosure** – Min 16 galv steel. Width of plate to extend a min of 3 in. (76 mm) beyond both sides of opening. Length of plate (transverse to steel floor unit direction) to extend to steel floor unit valley beyond each side of core-drilled hole with a min lap
System No. F-A-2027 continued

of 1-1/2 in. (38 mm) on the floor unit valley at each end. Circular cutout in plate to be 1/2 in. (13 mm) larger than the outside diam of through-penetrant. Max diam of opening is 5 in. (127 mm). Plate to be cut in half along the length of plate to permit installation around the nonmetallic pipe. Plate secured to valleys of floor unit using min 1/4 in. (6 mm) diam by 1-3/4 in. (44 mm) long steel expansion bolts or equivalent. Fasteners to be located approx 1 in. (25 mm) from edges of plate at each corner, at each plate/valley intersection and at both sides of cut made to permit installation around nonmetallic pipe.

B. Packing Material – Mineral wool batt insulation having min density of 4 pcf (64 kg/m³), firmly packed into flutes of steel floor units above metal plate enclosure to completely fill cavities. Packing material to be recessed within flutes from both edges of metal plate enclosure to accommodate the required thickness of fill material.

C. Fill, Void or Cavity Material* – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of fill material applied into flutes of steel floor units above metal plate enclosure to completely fill cavities. Caulk may also be used as an option within the annular space on the top side of the floor.

D. Fill, Void or Cavity Materials* – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Wrap strip(s) tightly wrapped around nonmetallic pipe or conduit (foil side exposed) with the top edges butted against metal plate enclosure. For nom 1/2 in. (13 mm) to nom 2 in. (51 mm) diam pipes or conduits, a min of one layer of wrap strip is required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes or conduits, a min of two layers of wrap strip is required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes or conduits, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam, with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie or equivalent.

3M COMPANY – CP 25WB+, IC 15WB+ caul or FB-3000 WT sealant. (Note: CP 25WB+ not suitable for use with CPVC pipes.)

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 3 in. (76 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete.
   B. **Welded Wire Fabric** – 6x6-W1.4xW1.4.
   C. **Steel Floor and Form Units* – **Composite or noncomposite 1-1/2 in. (38 mm) deep fluted galv units as specified in the individual Floor-Ceiling design. Diam of opening through floor to be 1/2 in. to 5/8 in. (13 mm to 16 mm) larger than the outside diam of through-penetrant (Item 2). Max diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the opening. Pipe to be rigidly supported on both sides of floor assembly. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Rigid Nonmetallic Conduit++ – **Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Metal Plate Enclosure** – Min 16 ga. galv steel. Width of plate to extend a min of 3 in. (76 mm) beyond both sides of opening. Length of plate (transverse to steel floor unit direction) to extend to steel floor unit valley beyond each side of core-drilled hole with a min lap of 1-1/2 in. (38 mm) on the floor unit valley at each end. Circular cutout in plate to be 1/2 in. (13 mm) larger than the outside diam of through-penetrant. Max diam of opening is 5 in. (127 mm). Plate to be cut in half along the length of plate to permit installation around the nonmetallic pipe. Plate secured to valleys of floor unit using min 1/4 in. (6 mm) diam by 1-3/4 in. (44 mm) long steel expansion bolts, or equivalent. Fasteners to be located approx 1 in. (25 mm) from edges of plate at each corner, at each plate/valley intersection and at both sides of cut made to permit installation around nonmetallic pipe. When plate seam is located beneath the crest of the steel deck, a 2 in. (51 mm) wide 16 ga. galv steel plate to be centered over seam and attached to plate with min No. 10 sheet metal screws, max 3 in. (76 mm) O.C. on both sides of seam.
   B. **Fill, Void or Cavity Material* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within annular space, flush with the bottom of the upper portion of the flute. Min 1/2 in. (13 mm) thickness of caulk applied into flutes of steel floor units above metal plate enclosure to completely cover packing material (Item 3C).
   3M COMPANY – CP 25WB+, IC 15WB+ caulka or FB-3000 WT sealant.
   B.1. **Fill, Void or Cavity Materials* – Caulk or Sealant** (Optional, Not Shown) – Min 1/4 in. (6 mm) thickness of caulk or sealant applied within annular space, flush with top of floor.
   3M COMPANY – CP 25WB+, IC 15WB+ caulka, FB-1000 NS, FB-1003 SL or FB-3000 WT sealant.
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)
System No. F-A-2033 continued

C. **Packing Material** – Min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into flutes of steel floor units above metal plate enclosure to completely fill cavities. Packing material to be recessed within flutes from both edges of metal plate enclosure to accommodate the required thickness of fill material. Min 1-1/2 in. (38 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into annular space, flush with bottom of floor.

D. **Fill, Void or Cavity Materials* – Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against bottom of metal plate enclosure. The min number of layers required is dependent upon the nom diam of the pipe. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes, two layers are required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes, three layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

E. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip. Coils of precut min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip with min 1 in. (25 mm) overlap at seam and compressed around wrap strip(s) using a min 1/2 in. (13 mm) wide by min 0.028 in. (0.71 mm) thick stainless steel band at the collar midpoint. Collar anchor tabs pressed tightly against metal plate enclosure. Where the anchor tabs are beneath the valley of the steel floor unit, the anchor tabs are to be secured with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers with one anchor bolt in each anchor tab. Where the anchor tabs are beneath the crest of the steel deck, the anchor tabs are to be secured to the metal enclosure with No. 10 by min 1/2 in. (13 mm) long self-drilling, self-tapping steel screws and min 1-1/4 in. (32 mm) diam steel fender washers. Retainer tabs bent 90 deg toward pipe to lock wrap strip(s) in position.

F. **Firestop Device* (Not Shown)** – As an alternate to Items D and E, a Firestop device consisting of a sheet-steel split collar lined with intumescent material may be used. Firestop device to be installed on underside of floor or on both sides of wall in accordance with the accompanying installation instructions.

G. **Firestop Device* (Not Shown)** – As an alternate to Items 3D and 3E, firestop device to be installed in accordance with the accompanying installation instructions. Firestop device to be installed and latched around pipe and secured to the underside of the floor. Collar anchor tabs pressed tightly against metal plate enclosure. Where the anchor tabs are beneath the valley of the steel floor unit, the anchor tabs are to be secured with 1/4 in. (6 mm) diam by min 1-1/4 in. (32 mm) long steel anchor bolts or equivalent in conjunction with 1-1/4 in. (32 mm) diam steel fender washers with one anchor bolt in each anchor tab. Where the anchor tabs are beneath the crest of the metal enclosure with No. 10 by min 1/2 in. (13 mm) long self-drilling, self-tapping steel screws and min 1-1/4 in. (32 mm) diam steel fender washers.

Note: Systems with Nonmetallic Through Penetration(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classificed Concrete Blocks*. For nom 2 in. (51 mm) diam and smaller pipes and conduits, diam of opening shall be 1 in. (25 mm) larger than nom pipe diam. For pipes and conduits greater than nom 2 in. (51 mm) diam of opening shall be 2 in. (51 mm) larger than nom pipe diam.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening. The annular space between pipe or conduit and periphery of opening shall be 1/2 in. (13 mm) for nom 2 in. (51 mm) diam pipes and smaller, and shall be 3/4 in. (19 mm) for pipes greater than nom 2 in. (51 mm) Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   **A. Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   **B. Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   
   **C. Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR 13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   **D. Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   **E. Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:

   **A. Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick flexible intumescent material supplied in 2 in. (51 mm) wide rolls. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe prior to recessing into opening. For nom 1/2 in. (13 mm) to nom 1-1/2 in. (38 mm) diam pipes a minimum of one layer of wrap is required. For nom 2 in. (51 mm) diam pipes a minimum of 2 layers of wrap are required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes a minimum of 3 layers of wrap are required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes a minimum of 4 layers of wrap are required. Wrap to be continuously wrapped around pipe in one piece and temporarily held in place with tape.

   **B. Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap manufacturer. Collar may also be field-fabricated. Steel collar wrapped tightly around applied wrap with min 1 in. (25 mm) overlap at seam. Collar for nom 3 in. to 4 in. (76 mm to 102 mm) penetrants shall be secured around applied wrap with three No. 6 by 1/4 in. (6 mm) long steel sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. Collars for nom 2-1/2 in. (64 mm) diam (and smaller) penetrants shall be secured with at least two 18 ga. (or heavier) wire ties. Collar retainer tabs shall be bent 90 degrees toward pipe to hold applied wrap. Prior to recessing collar assembly into opening, hanger straps to be fabricated out of minimum 0.016 in. (0.41 mm) thick (28 gauge) sheet steel. Hanger straps to be tapered from 1/4 in. (6 mm) wide to 1-1/4 in. (32 mm) wide and be of sufficient length so when attached to anchor tabs they lap onto floor a minimum of 1 in. (25 mm). For nom max 2 in. (51 mm) (and smaller) penetrants, two hangers are required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) penetrants, three hangers are required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) penetrants, four hangers are required. Hangers to be secured to collar assembly by inserting 1/4 in. (6 mm) end into slot opening in collar anchor tab and bending 180 degrees. Hangers may also be constructed from RC-1 Restricting Collar by cutting the width of the collar from the anchor tab (large tab) through the collar body to the
retaining tab (smaller tapered tab). For thicker concrete, additional hangers may be hooked together as described. Assembly to be slid through the opening so that approximately 1-3/4 in. (44 mm) of collar assembly projects below the bottom surface of the floor. Hangers to be bent 90 degrees onto floor surface. A minimum 1 in. (25 mm) overlap onto floor surface is required. Collars may or may not be secured to top of floor with masonry anchors.

C. **Packing Material** – Min 1/2 in. (13 mm) thickness of 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into the annular space on top of collar between the pipe and side of opening.

D. **Fill, Void or Cavity Material – Caulk or Sealant** – Minimum 1/4 in. (6 mm) thickness of fill material applied within the annular space, flush with top surface of floor.

3M COMPANY – CP 25WB+, IC 15WB+ caulk, FB-1000 NS, FB-1003 SL or FB-3000 WT sealant.
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the Underwriters Laboratories Inc. Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete.
   B. **Welded Wire Fabric** – 6x6 W1.4xW1.4.
   C. **Steel Floor and Form Units** – Composite or noncomposite 1-1/2 in. (38 mm) deep fluted galv units as specified in the individual Floor-Ceiling design. Max diam of opening is 6 in. (152 mm).
   D. **Steel sleeve** – (Optional- Not Shown) Max 6 in. (152 mm) ID (or smaller) 28 Ga (or heavier) fabricated steel sheet sleeve cast, grouted or inserted into floor assembly, may be installed with a max of 1 in. (25 mm) extension above floor and max extension of 2 in. (51 mm) below floor.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening. The annular space between pipe or conduit and periphery of opening shall be 1/2 in. (13 mm) for nom 2 in. (51 mm) diam pipes and smaller, and shall be 3/4 in. (19 mm) for pipes greater than nom 2 in. (51 mm). Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick flexible intumescent material supplied in 2 in. (51 mm) wide rolls. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe prior to recessing into opening. For nom 1/2 in. (13 mm) to nom 1 in. (25 mm) diam pipes a min of one layer of wrap is required. For nom 2 in. (51 mm) diam pipes a min of 2 layers of wrap are required. For nom 2-1/2 in. (64 and 76 mm) diam pipes a min of 3 layers of wrap are required. For nom 3 to 4 in. (89 and 102 mm) diam pipes a min of 4 layers of wrap are required. Wrap to be continuously wrapped around pipe in one piece and temporarily held in place with tape.
   B. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap layers. Coils of precut 0.016 in. thick (0.41 mm) (28 gauge) galv sheet steel available from wrap manufacturer. Collar may also be field-fabricated. Steel collar wrapped tightly around applied wrap with min 1 in. (25 mm) overlap at seam. Collar for nom 3 to 4 in. (76 to 102 mm) penetrants shall be secured around applied wrap with three No. 6 by 1/4 in. (6 mm) long steel sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. Collars for nom 2-1/2 in. (64 mm) diam (and smaller) penetrants shall be secured with at least two 18 ga. (or heavier) wire ties. Collar retainer tabs shall be bent 90° toward pipe to hold applied wrap. Prior to recessing collar assembly into opening, hanger straps to be fabricated out of min 0.016 in. (0.41 mm) thick (28 gauge) sheet steel. Hanger straps to be tapered from 1/4 in. (6 mm) wide to 1-1/4 in. (32 mm) wide and be...
of sufficient length so when attached to anchor tabs they lap onto floor a min of 1 in. (25 mm). For nom max 2 in. (51 mm) (and smaller) penetrants, two hangers are required. For nom 2-1/2 and 3 in. (64 and 76 mm) penetrants, three hangers are required. For nom 3-1/2 and 4 in. (89 and 102 mm) penetrants, four hangers are required. Hangers to be secured to collar assembly by inserting 1/4 in. (6 mm) end into slot opening in collar anchor tab and bending 180°. Hangers may also be constructed from RC-1 Restricting Collar by cutting the width of the collar from the anchor tab (larger tab) through the collar body to the retaining tab (smaller tapered tab). For thicker concrete, additional hangers may be hooked together as described. Assembly to be slid into the opening and recessed approximately 1-3/4 in. (44 mm) below the top surface of the floor. Hangers to be bent 90° onto floor surface. A min 1 in. (25 mm) overlap onto floor surface is required. Collars may or may not be secured to top of floor with masonary anchors. When steel sleeve (Item 1D) is used and extends above floor surface hangers are to be bent 180 degrees on to steel sleeve and overlap on to floor a min of 1 in. (25 mm).

C. **Packing Material** – Min 1/2 in. (13 mm) thickness of 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into the annular space on top of collar between the pipe and side of opening.

D. **Fill, Void or Cavity Material – Caulk or Sealant** – Min 1/4 in. (6 mm) thickness of fill material applied within the annular space, flush with top surface of floor.

3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant, FB-1000 NS sealant, FB-1003 SL sealant or IC 15WB+ caulk. (Note: CP 25WB+ not suitable for use with CPVC pipes.)

*Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – The fire rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 series design in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf 1600-2400 kg/m³) concrete.
   B. **Welded Wire Fabric** – 6x6-W1.4xW1.4
   C. **Steel Floor and Form Units** – Composite or noncomposite 1-1/2 in. (38 mm) deep fluted galv units as specified in the individual Floor-Ceiling design. Diam of opening through floor to be 3/8 in. to 1/2 in. (10 to 13 mm) larger than outside diam of through penetrant. Max size of opening is 7-1/4 in. (184 mm).
   D. **Steel sleeve** – (Optional-Not Shown) Max 7-1/4 in. (184 mm) ID (or smaller) 28 Ga (or heavier) fabricated steel sheet sleeve cast, grouted or inserted into floor assembly, may be installed with a max of 1 in. (25 mm) extension above floor and flush with top surface of metal plate (Item 3A).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the opening. The pipe or conduit to be rigidly supported on both sides of floor assembly. The following types and sizes of nonmetallic pipe or conduit may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 6 in. (152 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Metal Plate Enclosure** – Min 16 gauge galv steel plate. Width of plate to extend a min of 3 in. (76 mm) beyond both sides of the opening. Length of plate (transverse to steel floor unit direction) to extend to steel floor unit valley beyond each side of core-drilled hole with a min lap of 1-1/2 in. (38 mm) on the floor unit valley at each end. Circular cutout in plate to be 3/8 to 1/2 in. (10 to 13 mm) larger than the outside diam of through-penetrant. Max diam of opening is 7-1/4 in. (184 mm). Plate to be cut along the length of plate to permit installation around the nonmetallic pipe. Plate to be secured to valleys of floor unit using min 1/4 in. (6 mm) diam by 1-3/4 in. (44 mm) long expansion bolts. Fasteners to be located approx 1 in. (25 mm) from edges of plate at each corner, at each plate/valley intersection and at both sides of cut made to permit installation around nonmetallic pipe. When plate seam is located beneath the crest of the steel deck, a 2 in. (51 mm) wide 16 gauge galv steel plate to be centered over seam and attached to plate with min No. 10 sheet metal screws, max 3 in. (76 mm) OC on both sides of seam.
   B. **Packing Material** – Min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into flutes of steel floor units above metal plate enclosure to completely fill cavities. Packing material to be recessed within flutes from both edges of metal plate enclosure to accommodate the required thickness of fill material. Min 1/2 in. (13 mm) thickness of fill material of 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into annular space, flush with bottom of floor.
   C. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 1/4 in. (6 mm) thickness of caulk applied into flutes of steel floor units above metal plate enclosure to completely cover packing material (Item 3C). Caukl may also be used as an option within the annular space on the top side of the floor.

**3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant or IC 15WB + caulk. (Note: CP 25WB+ not suitable for use with CPVC pipes.)
**System No. F-A-2055 continued**

D. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick flexible intumescent material supplied in 2 in. (51 mm) wide strips. Min four continuous layers of wrap strip tightly wrapped around nonmetallic pipe and butted tightly against bottom of metal plate enclosure. An additional stack of four continuous layers of wrap strip tightly wrapped around nonmetallic pipe and butted tightly against the first stack of wrap strips.

3M COMPANY – Ultra GS

E. **Steel Collar** – Two nom 2 in. (51 mm) deep collars with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (0.41 mm) (28 gauge) galv sheet steel available from wrap strip manufacturer. Collars may also be field-fabricated from min 0.016 in. thick (0.41 mm) (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collars wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seams, with anchor tabs bent outward 90 degrees for upper or inner collars for securing to metal plate. Anchor tabs for lower collars to overlap onto upper collars. Collars to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at each collar’s midheight. Upper or inner collars to be secured to floor surface with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel expansion bolts in conjunction with steel nuts and min 1-1/4 in. (32 mm) diam steel fender washers. At location that the anchor tabs are beneath the crest of the steel deck, the anchor tabs are to be secured to the metal enclosure with No. 10 by min 1/2 in. (13 mm) long self-drilling, self-tapping steel screws and min 1-1/4 in. (32 mm) diam steel fender washers. min of six anchor bolts, symmetrically located, are required.

1. **Floor Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 5-1/2 in. (140 mm) above top surface of floor.

3. **Through Penetrants** – One nonmetallic pipe or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The nom pipe or conduit size shall match the nom size of the firestop device with the exception that both nom 1-1/2 in. (38 mm) and 2 in. (51 mm) diam pipes or conduits are suitable for use with the nom 2 in. (51 mm) diam device. The following types of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Schedule 40 solid core PVC or cellular core PVC (ccPVC) pipe for use in closed (process or supply) or vented (drain, waste or vent piping systems.

   B. **Rigid Nonmetallic Conduit (RNC)** – Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Schedule 40 solid core ABS or cellular core ABS (ccABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

The hourly T rating is dependent on the size and type of penetrant as well as the direction in which the penetrant is installed through the firestop device as shown in the following table:

4. **Fill, Void or Cavity Materials – Sealant** – (Optional, Not Shown) – For W Rating, a min 1/4 in. (6 mm) bead of sealant is required at the device/concrete interface on the top surface of the floor. When nom 1-1/2 in. (38 mm) diam pipe is installed in nom 2 in. (51 mm) diam device, a min 1/2 in. (13 mm) depth of sealant is required in the annular space between the pipe and the inside of the device to attain the W and L Ratings.

   **3M COMPANY** – FB-1000 NS Sealant, FB-1003 SL Sealant or FB-3000 WT Sealant

F Rating – 3 Hr 
T Rating – 0, 1/4, and 3 Hr (See Item 3) 
L Rating at Ambient – Less Than 1 CFM/sq ft (See Item 4) 
L Rating at 400°F – Less Than 1 CFM/sq ft (See Item 4)  
W Rating – Class 1 (See Item 4)

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 3-1/2 in. (89 mm) above top surface of floor.
   - **3M COMPANY** – 3M Fire Barrier Cast-In Device 2PCID, 3PCID, 4PCID.

2A. **Firestop Device – Height Adapter** – (Not Shown) – For use in floors greater than 8 in. (203 mm) thick. Adapter snaps onto top of firestop device (Item 2).
   - **3M COMPANY** – 3M Fire Barrier Cast-In Device Height Adapter, 2HA, 3HA, 4HA.

3. **Through Penetrants** – One nonmetallic pipe or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The nom pipe or conduit size shall match the nom size of the firestop device with the exception that both nom 1-1/2 in. (38 mm) and 2 in. (51 mm) pipes or conduits are suitable for use with the nom 2 in. (51 mm) diam device. The following types of nonmetallic pipes or conduits may be used:
   - **A. Polyvinyl Chloride (PVC) Pipe** – Schedule 40 solid core PVC or cellular core PVC (ccPVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **B. Rigid Nonmetallic Conduit (RNC)+** – Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFP A) No. 70.
   - **C. Chlorinated Polyvinyl Chloride (CPVC) Pipe** – SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   - **D. Acrylonitrile Butadiene Styrene (ABS) Pipe** – Schedule 40 solid core ABS or cellular core ABS (ccABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **E. Fire Retardant Polypropylene (FRPP) Pipe** – Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

The hourly T Rating is dependent on the size and type of penetrant as well as the direction in which the penetrant is installed through the firestop device as shown in the following table:

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. **Firestop Device** – Cast in place firestop device installed flush with bottom surface of floor and trimmed to be 2 in. (51 mm) below top surface of floor.
      3M COMPANY – 3M Fire Barrier Cast-In Device, 2MCID
   B. **Firestop Device – Tub Box** – Nom 8 by 12 by 2 in. (203 by 305 by 51 mm) deep polyethylene tub box, with adjustable legs, snapped into top of Cast-In Device, 2MCID (Item 2A) and cast in concrete slab, flush with top surface of floor.
      3M COMPANY – 3M Fire Barrier Cast-In Device Tub Box, 2TB

3. **Drain Piping** – Nom 1-1/2 in. or 2 in. (38 or 51 mm) diam nonmetallic pipe and drain fittings cemented together. Drain piping rigidly supported away from tub box with suitable hangers. The following types of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Schedule 40 solid core PVC or cellular core PVC (ccPVC) pipe.
   B. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Schedule 40 solid core ABS or cellular core ABS (ccABS) pipe.

4. **Waste/Overflow Fitting** – Nom 1-1/2 in. (38 mm) diam waste/overflow fitting, formed of polyvinyl chloride (PVC).

5. **Fill, Void or Cavity Materials – Sealant** – (Optional, Not Shown) – For W Rating, a min 1/4 in. (6 mm) bead of sealant is required at the tub box/concrete interface on the top surface of the floor. For W and L Ratings, a min 1/2 in. (13 mm) depth of sealant is required in the annular space between the drain piping and the tub box throat flush with the bottom inside surface of the tub box.
   3M COMPANY – FB-1000 NS Sealant, FB-1003 SL Sealant or FB-3000 WT Sealant

1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. **Concrete** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete.
   B. **Steel Floor and Form Units** – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. **Firestop Device – Metal Deck Adapter** – Nom adapter size to match the nom penetrant size (Item 3), except that 2 in. (51 mm) adapter is suitable for both nom 1-1/2 in. and 2 in. (38 and 51 mm) diam penetrants. Adapter to be installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.
      - 3M COMPANY – 3M Fire Barrier Cast-In Device Metal Deck Adapter, 2MDA, 3MDA, 4MDA
   B. **Firestop Device** – Snapped into top of metal deck adapter in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 5-1/2 in. (140 mm) above top surface of floor.
      - 3M COMPANY – 3M Fire Barrier Cast-In Device, 2PCID, 3PCID, 4PCID

3. **Through Penetrants** – One nonmetallic pipe or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The nom pipe or conduit size shall match the nom size of the firestop device with the exception that both nom 1-1/2 in. and 2 in. (38 and 51 mm) diam pipes or conduits are suitable for use with the nom 2 in. (51 mm) diam device. The following types of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Schedule 40 solid core PVC or cellular core PVC (ccPVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit (RNC)** – Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Schedule 40 solid core ABS or cellular core ABS (ccABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. **Fill, Void or Cavity Materials – Sealant** – (Optional, Not Shown) – For W Rating, a min 1/4 in. (6 mm) bead of sealant is required at the device/concrete interface on the top surface of the floor. When nom 1-1/2 in. (38 mm) diam pipe is installed in nom 2 in. (51 mm) diam device, a min 1/2 in. (13 mm) depth of sealant is required in the annular space between the pipe and the inside of the device to attain the W and L Ratings.

F Rating – 2 Hr
T Rating – 1/4 Hr
L Rating at Ambient – Less Than 1 CFM/sq ft (See Item 5)
L Rating at 400° F – Less Than 1 CFM/sq ft (See Item 5)
W Rating – Class 1 (See Item 5)

1. Floor Assembly – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. Concrete – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete.
   B. Steel Floor and Form Units – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. Firestop Devices – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. Firestop Device – Metal Deck Adapter – Nom 2 in. (51 mm) adapter, installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.
      3M COMPANY – 3M Fire Barrier Cast-In Device Metal Deck Adapter, 2MDA
   B. Firestop Device – Snapped into top of metal deck adapter in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 5-1/2 in. (140 mm) above top surface of floor.
      3M COMPANY – 3M Fire Barrier Cast-In Device, 2MCID or 2PCID

3. Through Penetrants – A max of three nonmetallic pipes, conduit or tube installed eccentrically or concentrically within the firestop system. Annular space between the penetrants and the periphery of the opening shall be min 0 in. (0 mm) (point contact) to max 1 in. (25 mm). Annular space between penetrants is min 1/4 in. (25 mm) to max 1 in. (25 mm). Pipe or conduit to be rigidly supported on both sides of floor assembly. The following types of nonmetallic pipes or conduits may be used:
   A. Polyvinyl Chloride (PVC) Pipe – Nom 1 in. (25 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. Rigid Nonmetallic Conduit (RNC) – Nom 1 in. (25 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).
   C. Chlorinated Polyvinyl Chloride (CPVC) Pipe – Nom 1 in. (25 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. Crosslinked Polyethylene (PEX) Tubing – Nom 3/4 in. (19 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. Packing Material – (Not Shown) – Min 1/2 in. (13 mm) thickness of min 4pcf (64 kg/m³) mineral wool batt insulation firmly packed into the top of the firestop device (Item 2B) as a permanent form, flush with the top surface of the floor.

5. Fill, Void or Cavity Materials – Sealant – (Optional, Not Shown) – For W Rating, a min 1/4 in. (6 mm) bead of sealant is required at the device/concrete interface on the top surface of the floor. When nom 1-1/2 in. (38 mm) diam pipe is installed in nom 2 in. (51 mm) diam device, a min 1/4 in. (6 mm) depth of sealant atop a min 1/2 in. (13 mm) thickness of mineral wool packing material is required in the annular space between the pipe and the inside of the device to attain the W and L Ratings.
      3M COMPANY – FB-1000 NS Sealant, FB-1003 SL Sealant or FB-3000 WT Sealant

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Metallic Pipes** – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe or cast/ductile iron pipe cast or grouted into concrete. Pipe to terminate 2-1/2 to 3-1/2 in. (64 to 89 mm) below bottom surface of floor and a min 2 in. above top surface of floor.

3. **Compression Coupling** – Nonmetallic pipe (Item 4) to be secured to metallic pipe with compression type high pressure pipe coupling with elastomeric gasket and a stainless steel jacket with stainless steel band clamps.

4. **Nonmetallic Pipe** – Nom 4 in. (102 mm) diam (or smaller) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe.
   B. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe.
   C. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe.
5. Firestop System – The firestop system shall consist of the following:

A. Fill, Void or Cavity Material* – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic drain pipe (Item 4) located below floor. The top edge of the wrap strips shall abut the bottom edge of the compression coupling (Item 3). For nom 2 in. (51 mm) diam (and smaller) pipes, two layers are required. For nom 2-1/2 in. (64 mm) to 3 in. (76 mm) diam pipes, three layers are required. For nom 3-1/2 in. (89 mm) and 4 in. (102 mm) diam pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

B. Steel Collar – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs upward (unbent), wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam and compressed around wrap strip layers using a min 1/2 in. (13 mm) wide stainless steel clamp at the collar midheight.

C. Hanger Straps – Hanger straps to be fabricated out of min 0.016 in. (0.41 mm) thick (28 gauge) sheet steel. Hanger straps to be tapered from 1/4 in. (6 mm) wide to 1-1/4 in. (32 mm) wide and be of sufficient length so when attached to anchor tabs they lap onto metallic pipe above the compression coupling a min of 1 in. (25 mm) For nom max 2 in. (51 mm) (and smaller) penetrants, two hangers are required. For nom 2-1/2 and 3 in. (64 and 76 mm) penetrants, three hangers are required. For nom 3-1/2 and 4 in. (89 and 102 mm) penetrants, four hangers are required. Hangers to be secured to collar assembly by inserting 1/4 in. (6 mm) end into slot opening in collar anchor tab and bending 180°. The hangers shall be tightly compressed around the metallic pipe below the floor, directly above the compression coupling with a min 1/2 in. (13 mm) stainless steel hose clamp.

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max diam of opening is 9 in. (229 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between penetrant and periphery of opening shall be min 1/4 in. (6 mm) to max 4-1/4 in. (108 mm). Penetrant to be rigidly supported on both sides of floor assembly. The following types and sizes of pipes or conduit may be used:
   - **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   - **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electric Code (NFPA No. 70).

3. **Firestop System** – The firestop system shall consist of the following:
   - **Steel Cover Plate** – Min 24 gauge galv steel cover plate, sized to overlap opening a min of 3 in. (76 mm) on all sides. Opening in plate for penetrant to be sized to the outside diam of penetrant. Plate attached to bottom of floor with min 3/16 in. (4.8 mm) diam by 1-1/4 in. (32 mm) long steel masonry anchors spaced a max of 6 in. (152 mm) OC. Seams in plate covered with min 2 in. (51 mm) wide 28 gauge (or heavier) galv steel strip attached to cover plate with No. 10 (or larger) steel screws on each side of seam spaced a max of 3 in. (76 mm) OC.
   - **Fill, Void or Cavity Material** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic drain pipe (Item 4) located below floor. The top edge of the wrap strips shall abut the bottom edge of the compression coupling (Item 3). For nom 2 in. (51 mm) diam (and smaller) pipes, two layers are required. For nom 2-1/2 in. (64 mm) to 3 in. (76 mm) diam pipes, three layers are required. For nom 3-1/2 in. (89 mm) and 4 in. (102 mm) diam pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.
   - **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against cover plate, and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide stainless steel clamp at the collar midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along with three No. 6 by 3/8 in. (10 mm) long self-tapping steel screws. Collar to be secured to cover plate with No. 10 (or larger) by min 3/4 in. (19 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 2-1/2 to 3 in. (64 to 76 mm) diam and nom 3-1/2 to 4 in. (89 to 102 mm) diam pipes, respectively.
   - **Fill, Void or Cavity Material** – **Mortar** – Min 3 in. (76 mm) thickness of mortar applied within the annulus on top surface of cover plate, flush with bottom surface of floor.

3M COMPANY – 3M Fire Barrier Mortar

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device must be trimmed flush with top surface of floor.

   **3M COMPANY** – 3M Fire Barrier Cast-In Device 6PCID

2A. **Firestop Device** – Height Adapter* (not shown) – For use in floors greater than 8 in. (203 mm) thick. Adapter snaps onto top of firestop device (Item 2).

   **3M COMPANY** – 3M Fire Barrier Cast-In Device Height Adapter, 6HA

3. **Through Penetrant** – One nonmetallic pipe or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The following types and sizes of nonmetallic pipes or conduit may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diam Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diam Schedule 40 cellular core PVC (ccPVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   C. **Rigid Nonmetallic Conduit (RNC)**+ – Nom 6 in. (152 mm) diam Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

The hourly F and T Rating of the firestop system is 3 Hr for penetrants A and C. The hourly F and T Rating is 2 Hr for penetrant B.

1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   - **A. Concrete** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete topping.
   - **B. Steel Floor and Form Units** – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   - **A. Firestop Device** – **Metal Deck Adapter** – Adapter installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.
     - 3M COMPANY – 3M Fire Barrier Cast-In Device Metal Deck Adapter, 6MDA
   - **B. Firestop Device** – Snapped into top of metal deck adapter in accordance with accompanying installation instructions. The device shall be trimmed flush with top surface of floor.
     - 3M COMPANY – 3M Fire Barrier Cast-In Device, 6PCID

3. **Through Penetrant** – One nonmetallic pipe or conduit installed within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The following types and sizes of nonmetallic pipes or conduit may be used:
   - **A. Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diam Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **B. Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diam Schedule 40 cellular core PVC (ccPVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **C. Rigid Nonmetallic Conduit (RNC)** – Nom 6 in. (152 mm) diam Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   The hourly F and T Ratings of the firestop system are 3 Hr when Item 3A or 3C is used. The hourly F and T Ratings of the firestop system are 2 Hr when Item 3B is used.

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Max diam of opening is 6 in. (152 mm).

2. **Plastic Plumbing Fixtures** – Shower Base Receptor – One-piece molded nonmetallic shower base receptor with stainless steel drain plate. Shower base receptor to be installed in accordance with the manufacturer’s instructions.

   TILE-REDI USA LLC – Model 3360L, 3360R, 37NEO, 3737, 4837, 4837ADA, 4837MB or 4848

3. **Tile** – (Not Shown) – Ceramic or stone tile applied to shower pan floor with epoxy adhesive in accordance with shower base receptor installation instructions.

4. **Nonmetallic Pipe** – Nom 2 in. (51 mm) diam Schedule 40 solid or cellular core PVC pipe solvent welded into drain in the bottom of the shower base receptor and centered in the floor opening.

5. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly-packed into annular space as a permanent form, flush with bottom surface of concrete floor.

   B. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Single layer of wrap strip tightly wrapped around nonmetallic drain pipe (Item 4) with a butted seam and with the top edge of the wrap strip abutting the packing material. Wrap strip layer temporarily held in position using tape.

   C. Steel Collar – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and tabs to retain wrap strip layer. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against bottom of packing material, and collar to be compressed around wrap strip using a min 1/2 in. (13 mm) wide stainless steel clamp at the collar midheight. Collar to be secured to underside of concrete floor with steel concrete screws with min 1-1/4 in. (32 mm) diam steel washers in conjunction with steel extension straps. Hanger tab extension straps to be fabricated from min 0.022 in. (0.6 mm) thick galv sheet steel. Taper straps from 1/4 in. (6 mm) wide to 1 in. (25 mm) wide with sufficient length to allow 1-1/2 to 2 in. (38 to 51 mm) lap onto floor. Straps secured to collar by inserting min 1 in. (25 mm) length of 1/4 in. (6 mm) wide end into hole on mounting tab and bending 180 degrees. Min of four anchor screws, symmetrically located, are required.

System No. F-A-2268
July 25, 2016

F Rating — 2 Hr
T Rating — 1-1/2 Hr
W Rating — Class I (See Item 3)
L Rating at Ambient — Less than 1 CFM/ft²
L Rating at 400 F — Less than 1 CFM/ft²

1. **Floor Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max diam of opening is 9 in. (229 mm).

2. **Through Penetrant** — One nonmetallic pipe to be installed concentrically within the firestop system. The annular space between the pipe and the periphery of the opening shall be 1/2 in. (13 mm). Pipe to be rigidly supported on both sides of the floor assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   - **Polypropylene Pipe** — Nom 8 in. (203 mm) diam (or smaller) Polystar PP-RCT (CT-White) pipe for use in closed (process or supply) piping systems.

3. **Firestop System** — The firestop system shall consist of the following:
   - **Fill, Void or Cavity Material** — Wrap Strip — Two layers of min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Two layers of wrap strip tightly wrapped around nonmetallic pipe and secured with either aluminum foil tape or filament tape. Wrap strip is to be installed within the opening such that the top of the wrap strip is min 1/2 in. (13 mm) below the top surface of floor.
   - **Packing Material** — Min 1-1/2 in. (38 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form, flush with the bottom surface of the floor.

*(Note: W Rating only applies when FB 3000 WT Sealant is used.)*

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor Assembly** – Min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Floor may also be constructed of any min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Diam of opening shall be 1 in. (25 mm) to 1-1/4 in. (32 mm) larger than nom pipe diam.

See Precast Concrete Units (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) to 5/16 in. (8 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   C. **Rigid Nonmetallic Conduit**++ – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFP A No. 70).

   D. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   E. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   The T Rating is 2 Hr for penetrants A, C and D. The T Rating is 0 Hr for penetrant B and D.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials*** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min two continuous layers of wrap strip inserted into opening such that 1/2 in. (13 mm) of the wrap strip extended below the bottom surface of the floor and secured in position with two 1/4 in. (6 mm) bands of filament tape placed 1/2 in. (13 mm) from the bottom and top of wrap strip. Wrap strip applied at the bottom web of precast concrete unit.

   B. **Fill, Void or Cavity Materials*** – **Caulk, Putty or Sealant** – Min 1/4 in. (6 mm) thickness of caulk, putty or sealant applied within annular space, flush with top of floor.

   *Bearing the UL Classification Marking

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – Min 6 in. (152 mm) thick UL Classified hollow-core *Precast Concrete Units*. Floor may also be constructed of any min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 -2400 kg/m³) concrete. Diam of opening shall be 1 in. (25 mm) to 1-1/4 in. (32 mm) larger than nom pipe diam. 

See *Precast Concrete Units* (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – Min 28 gauge galv steel sleeve fabricated with a min 1 in. (25 mm) overlap at the seam. Length of sleeve to be the same as floor thickness. Sleeve to be friction-fitted into opening, flush with both surfaces of floor.

3. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) to 5/16 in. (8 mm) annular space between pipe or conduit and sleeve. Pipe or conduit to be rigidly supported on both sides of the floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Rigid Nonmetallic Conduit++** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – *Wrap Strip* – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and secured with two 1/4 in. (6 mm) wide bands of filament tape placed 1/2 in. (13 mm) from bottom and top of wrap strip. The layers of wrap strip and its position within the opening are dependent on the pipe size. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required, recessed within the opening 2-1/4 in. (57 mm) from the bottom surface of the floor or both surfaces of the wall. For nom 2-1/2 and 3 in. (64 and 76 mm) diam pipes, two layers are required, recessed within the opening 2 in. (51 mm) from the bottom surface of the floor or both surfaces of the wall. 

   **3M COMPANY** – Ultra GS

   **B. Fill, Void or Cavity Materials** – *Caulk Putty or Sealant* – Min 1/4 in. (6 mm) thickness of caulk putty or sealant applied within annular space, flush with top of floor.

   **3M COMPANY** – CP25WB+ caulk, FB-3000 WT sealant, MP+ Stix caulk, FB-1000 NS sealant, IC 15WB+ caulk or FireDam 150+ caulk. (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – Min 6 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete.

2. **Firestop Devices** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   
   A. **Firestop Device** – Cast in place firestop device installed flush with bottom surface of floor and trimmed to be 2 in. below top surface of floor.
      
      3M COMPANY – 3M Fire Barrier Cast-In Device, 2MCID
   
   B. **Firestop Device – Tub Box** – Nom 8 by 12 by 2 in. deep polyethylene tub box, with adjustable legs, snapped into top of Cast-In Device, 2MCID (Item 2A) and cast in concrete slab, flush with top surface of floor.
      
      3M COMPANY – 3M Fire Barrier Cast-In Device Tub Box, 2TB

3. **Drain Piping** – Nom 1-1/2 in. or 2 in. diam nonmetallic pipe and drain fittings cemented together. Drain piping rigidly supported away from tub box with suitable hangers. The following types of nonmetallic pipes may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Schedule 40 solid core PVC or cellular core PVC (ccPVC) pipe.
   
   B. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Schedule 40 solid core ABS or cellular core ABS (ccABS) pipe.

4. **Waste/Overflow Fitting** – Nom 1-1/2 in. diam waste/overflow fitting, formed of polyvinyl chloride (PVC).

System No. F-B-2018
November 22, 2004
F Rating – 3 Hr
T Rating – 1 Hr

1. Floor Assembly – Min 6-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete.

2. Aerator Adapter – Nom 14 in. by 9 in., min 4 in. deep cast-in-place galv steel adapter box provided with max 5 in. diam opening on top side. Firestop device (Item 3) mechanically fastened to the top side of box prior to placement of the concrete. The concrete thickness on top of adapter box shall be a min 2-1/2 in.

2A. Firestop Device – Aerator Adapter* – As an alternate to Item 2, a nom 10 in. by 7 in. by 4 in. deep nonmetallic adapter box may be used. Firestop device (Item 3) latched to the top side of box with snaps provided as part of the adapter prior to placement of the concrete. The concrete thickness on top of adapter box shall be a min 2-1/2 in.

3M COMPANY – 3M Fire Barrier Cast-In Device Aerator Adapter

3. Firestop Device* – The firestop device is mechanically attached to top of adapter (Item 2) with a min of four No. 8 (or larger) steel sheet metal screws or latched to the top side of nonmetallic box and cast in place and permanently embedded during concrete placement in accordance with accompanying installation instructions.

3M COMPANY – 3M Fire Barrier Cast-In Device, 3PCID, 4PCID

4. Drain Piping – Nom 3 in. or 4 in. diam schedule 40 solid core or cellular core polyvinyl chloride (PVC) pipe. Drain piping rigidly supported on both sides of floor assembly.

5. Aerator Fitting – (Not Shown) – Nom 3 in. or 4 in. diam cast iron aerator fitting attached to drain piping below floor assembly. Fitting shall not penetrate the firestop device.

1. Wall Assembly – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 5 in. (127 mm).

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. Nonmetallic Pipe – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems or SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. One pipe is centered within the firestop system. The annular space between the pipe and the edge of the through opening on each side of the wall shall be min 0 in. (0 mm, point contact) to max 1/4 in. (6 mm). When nom 3-1/2 or 4 in. (89 or 102 mm) diam pipe is used, T Rating is 0 hr. When nom 3 in. (76 mm) diam (or smaller) pipe is used, the T Rating is 2 hr.

3. Firestop System – Installed symmetrically on both sides of wall assembly. The details of the firestop system shall be as follows.

A. Fill, Void or Cavity Materials* – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 1 in. (25 mm) wide strips. Nom 1 in. (25 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) with the edges butted against the surface of the wall. Sufficient layers of wrap strip shall be installed to lap a min of 3/16 in. (5 mm) on the wall surface around the entire perimeter of the circular through opening. For nom 1/2 in. (13 mm) to nom 2 in. (51 mm) diam pipes, a min of one layer of wrap strip is required. For nom 2-1/2 in. (64 mm) and nom 3 in. (76 mm) diam pipes, a min of two layers of wrap strip is required. For nom 3-1/2 in. (89 mm) and nom 4 in. (102 mm) diam pipes, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with a butted seam, with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie or equivalent.

B. Steel Collar – Nom 1 in. (25 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long overlay at the seam. With steel collar anchor tabs pressed tightly against wall surface, compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. Secure collar to wall surface with min 3/16 in. (5 mm) diam by min 1-1/4 in. (32 mm) long steel anchor bolts in conjunction with min 3/16 in. (5 mm) diam pipes. For nom 3-1/2 and 4 in. (76 and 102 mm) diam pipes. Four bolts, symmetrically located, required for nom 3-1/2 and 4 in. (76 and 102 mm) diam pipes. As a final step, bend retainer tabs 90 degree toward pipe to lock wrap strip layers in position.

C. Fill, Void or Cavity Materials* – Caulk or Sealant – (Not Shown) – Generous bead of caulk applied to outer perimeter of wrap strip at interface with wall surface and to perimeter of pipe or conduit at its egress from the wrap strip layers.

D. Firestop Device* – (Not Shown) – As an alternate to Item A and B when nom 1-1/2, 2, 3 or 4 in. (38, 51, 76 and 102 mm) diam nonmetallic pipes are used, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of top plate or on both sides of wall in accordance with the accompanying installation instructions.

*Bearing the UL Classification Mark

Reprinted from the Online Certifications Directory with permission from Underwriters Laboratories Inc. Copyright © 2010 Underwriters Laboratories Inc®

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of opening shall be 7/8 in. to 1 in. (22 mm to 25 mm) larger than the outside diam of nonmetallic pipe or conduit (Item 2).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. The annular space for nom 1-1/4 in. (32 mm) diam and smaller between the pipe or conduit and periphery of opening shall be min 0 in. (point contact) to max 7/8 in. (0 mm to max 22 mm). The annular space for pipe or conduit greater than nom 1-1/4 in. (32 mm) diam between the pipe or conduit and periphery of opening shall be min 1/2 in. to max 1 in. (13 mm to 25 mm). Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) piping system.

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR11 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Rigid Nonmetallic Conduit**++ – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   E. **Electrical Nonmetallic Tubing (ENT)**++ – Nom 1 in. (25 mm) diam (or smaller) ENT formed of PVC, installed in accordance with the National Electrical Code (NFPA No. 70).

   F. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   See Rigid Nonmetallic Conduit (DZKT), Electrical Nonmetallic Tubing (FKHU) in UL Construction Materials Directory for names of manufacturers.

   The hourly T Rating is dependent on the hourly rating of the wall assembly, the pipe or conduit size and whether the pipe is intended for use as a closed or vented system, as shown in the following table:

<table>

3. **Packing Material** (Optional) – Mineral wool or fiberglass insulation or polyethylene backer rod firmly packed into opening as a permanent form. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of caulk fill material.

4. **Fill, Void or Cavity Materials* – Caulk, Sealant or Putty** – Min thickness of 5/8 in. and 1-1/4 in. (16 mm to max 32 mm) of caulk or putty for 1 and 2 hr rated wall assemblies, respectively, applied within annulus between pipe or conduit and periphery of the opening, flush with both surfaces of wall assembly. At the point contact location between pipe or conduit and wall, a min 1/2 in. (13 mm) diam bead of caulk or putty shall be applied at the pipe or conduit/wall interface on both surfaces of wall assembly.

   **3M COMPANY** – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

F Rating – 2 Hr
T Rating – 0 Hr

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 3-1/2 in. (89 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit installed eccentrically or concentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 1-1/8 in. (0 mm to max 29 mm). Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   
   **A. Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   **B. Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   **C. Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   
   **D. Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   **E. Electrical Nonmetallic Tubing (ENT)** – Nom 1-1/4 in (32 mm) diam (or smaller) ENT installed in accordance with Article 331 of the National Electrical Code (NFPA No. 70).

   See **Electrical Nonmetallic Tubing** (FKHU) category in the Electrical Construction Materials Directory for names of manufacturers.

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to penetrant/wall interface at the point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 4 in. (102 mm). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One or more nonmetallic pipes, conduits or tubes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Space between penetrants shall be min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit++** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Fill, Void or Cavity Material* – Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to penetrant/wall interface at point contact location on both sides of wall.

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 4-1/2 in. (114 mm).

   See [Concrete Blocks](CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit concentrically or eccentrically within the firestop system. The annular space between penetrant and sleeve shall be min 3/8 in. (10 mm) to max 5/8 in. (16 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit**++ – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min three layers of wrap strip tightly wrapped around nonmetallic pipe and completely wrapped with min 3 mil foil tape. Wrap strip to be slid into opening such that the outer edge of wrap strip extends approx 1/2 in. (13 mm) from both surfaces of wall.

   **3M COMPANY** – Ultra GS

   B. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to concrete/wrap strip interface at point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

System tested with a pressure differential of 2.5 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. **Wall Assembly** – Min 6 in. (152 mm) thick lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Diam of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Item 2).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant** – One nonmetallic pipe to be installed concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of opening shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipe may be used:

   A. **Polypropylene (PP) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Aquatherm Fusiotherm SDR 7.4 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Polypropylene (PP) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Aquatherm Climatherm SDR 11 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** – Min 1/4 in. (6 mm) thickness of fill material applied within the annular space, flush with both surfaces of wall.

   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min three layers of wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against both surfaces of the wall. Wrap strip layers temporarily held in position using aluminum filament tape, foil tape, steel wire tie, or equivalent.

   C. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against wall surfaces, and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the middle of collar. Collar to be secured to wall surfaces with min 1-1/4 in. (32 mm) long, min 3/16 in. (5 mm) diam steel masonry anchors in conjunction with steel nuts and min 1 in. (25 mm) diam steel washers. Min three anchors, symmetrically located.

System tested with a pressure differential of 50 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 5-1/2 in. (140 mm).

   See **Concrete Blocks** (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Sleeve** – Cylindrical sleeve fabricated from min 28 ga galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam friction fit into wall opening, extending nom 1 in. (25 mm) beyond both wall surfaces.

3. **Through Penetrants** – One nonmetallic pipe or conduit installed concentrically within the firestop system. The annular space between penetrant and periphery of opening shall be nom 1/2 in. (13 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits:
   - **A. Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **B. Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **C. Polyvinylidene Fluoride (PVDF) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   - **D. Rigid Nonmetallic Conduit+** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

4. **Firestop System** – The firestop system shall consist of the following:
   - **A. Fill, Void or Cavity Materials* - Wrap Strip** – Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe and secured with the adhesive closure tab. Wrap strip to be slid into sleeved opening at both sides of wall such that the outer edge of wrap strip is recessed 1/2 in. (13 mm) from both ends of sleeve.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** – Tuck-In Wrap Strip
B. **Fill, Void or Cavity Material** – Min 1/2 in. (13 mm) thickness of sealant applied within annulus flush with both ends of sleeve. Min 1/4 in. (6 mm) diam bead of sealant applied to wall/sleeve interface on both sides of wall.

**3M COMPANY 3M FIRE PROTECTION PRODUCTS** – IC 15WB+, Fire Barrier CP 25WB+ or 3000WT sealant

C. **Foil Tape (Not Shown)** – Required only when CPVC penetrant (Item 3B) is used. Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip. Foil tape is to be positioned such that it will be centered under the wrap strip material with adhesive side out.

---

*Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively. Reprinted from the Online Certifications Directory with permission from UL®*
System No. W-J-2256

F Rating — 2 Hr
T Rating — 1/2 Hr

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf) (1600-2400 kg/m^3) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6-5/8 in. (168 mm).

   See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The pipe or conduit may be installed at an angle not greater than 45 degrees from perpendicular. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular polyvinyl chloride(PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems.

   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 (or heavier) solid core or cellular core acrylonitrile butadiene styrene (ABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Metallic Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. (0.48 mm) thick (26 gauge) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Sleeve to extend a min of 2 in. (51 mm) beyond both sides of the wall. Length of sleeve to be min 4 in. (102 mm) plus the thickness of the wall. The inside diam of the sleeve shall be larger than outside diam of nonmetallic pipe or conduit such that an annular space will be present between the steel sleeve and the pipe around the entire circumference of the pipe to accommodate the layer(s) of wrap strips (Item 3B). The annular space between the outside of the wrap strip layer(s) and the inside of the sleeve shall be min 0 in. (0 mm, point contact) to max 1/4 in. (6 mm). The annular space between the outside of the sleeve and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm).

   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) and slid into sleeve on both sides of wall such that the outer edges of wrap strips are flush with the outer edges of the sleeve. For nom 1/2 in. (13 mm) to nom 1-1/2 in. (38 mm) diam pipes, a min of one layer of wrap strip is required. For nom 2 in., 2-1/2 in. and 3 in. (51 mm, 64 mm and 76 mm) diam pipes, a min of two layers of wrap strip is required. For nom 3-1/2 in. and 4 in. (89 and 102 mm) diam pipes, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam with butted seams in successive layers staggered. Wrap strip layers held in position using aluminum foil tape, steel wire tie, or equivalent. A min 1/2 in. (13 mm) wide stainless steel hose clamp shall be secured around the outside of the sleeve over the center of the wrap strips on both ends of the sleeve.

   3M COMPANY – Type FS-195+.

   C. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min thickness of 1-1/4 in. (32 mm), applied within annulus between metallic sleeve and periphery of the opening, flush with both surfaces of wall assembly. At the point contact location between sleeve and wall surface, a min 1/2 in. (13 mm) diam bead of caulk shall be applied at the sleeve/wall interface on both surfaces of wall assembly. A min 1/4 in. (6 mm) bead of caulk shall also be applied over the outer edges of the wrap strips and within the annular space between the wrap strip and sleeve on both sides of wall.

   3M COMPANY – Type CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant. (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   *Bearing the UL Classification Mark

1. **Wall Assembly** – Min 6 in. (152 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified solid filled Concrete Blocks*. Maximum diam of opening is 9 in. (229 mm).

   See **Concrete Blocks** (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between pipe and the periphery of opening shall be min 3/8 in. (9.5 mm) to a max 3/4 in. (19 mm). The following types and sizes of nonmetallic pipes may be used:

   A. **Polypropylene (PP) Pipe** – Nom 8 in. (200 mm OD) or nom 6 in. (160 mm OD) diam Orion Polystar™ PP-RCT (CT-White) SDR 17 PP pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials* – Wrap Strip** – Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Two layers of wrap strip are tightly wrapped around the nonmetallic pipe and secured with aluminum foil tape. Wrap strip is to be installed on both sides of wall and slid into the wall opening such that the outer edge of wrap strip is extending 5/8 in. (16 mm) from both surfaces of wall.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** – Tuck-In Wrap Strip WS Roll

   B. **Fill, Void or Cavity Materials* – Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of sealant applied within annular space, flush with both sides of wall.

   **3M COMPANY 3M FIRE PROTECTION PRODUCTS** – IC 15WB+ Caulk, CP 25WB+ Caulk, or 3000 WT Sealant

*Indicates such products shall bear the UL Certification Mark for jurisdictions employing the UL Certification.

Reprinted from the Online Certifications Directory with permission from UL®
**System No. W-K-2001**

**May 19, 2005**

**F Rating – 4 Hr**

**T Rating – 4 Hr**

---

1. **Wall Assembly** – Min 8-5/8 in. (219 mm) thick wall assembly constructed of any UL Classified Concrete Blocks* or common bricks, laid up with mortar. Max diam of opening is 3 in. (76 mm).

   See Concrete Blocks (CATZ) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and periphery of opening shall be min of 1/4 in. to max 7/8 in. (6 mm to max 22 mm). Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   **A. Polyvinyl Chloride (PVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   **B. Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   **C. Rigid Nonmetallic Conduit** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   
   **D. Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   **E. Fire Retardant Polypropylene (FRPP) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

   **A. Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Two continuous layers of wrap strip tightly wrapped around nonmetallic pipe and held in place with 2 in. (51 mm) wide minimum 3 mil foil tape. Wrap strip to be slid into annular space on both sides of wall such that a 1/4 in. (6 mm) of wrap strip extends beyond both surfaces of the wall.

   **3M COMPANY – Ultra GS**

   **B. Fill, Void or Cavity Materials** – Caulk or Sealant – Min thickness of 5/8 in. (16 mm) of caulk applied within annulus between wrap strip and periphery of opening, flush with both surfaces of wall assembly. An additional 1/4 in. (6 mm) diam bead of caulk applied at the wrap strip/wall interface on both sides of wall.

   **3M COMPANY – CP 25BW+, IC 15WB+ caulk or FB-3000 WT sealant**

   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

   *Bearing the UL Classification Mark

System No. W-L-2002
November 20, 2009
F Ratings – 1, 1-1/2 and 2 Hr (See Item 3)
T Ratings – 3/4, 1, 1-1/2 and 2 Hr (See Item 3)
L Rating At Ambient – 7 CFM/sq ft (See Item 3C)
L Rating At 400 F – 1 CFM/sq ft (See Item 3C)

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – 5/8 in. (16 mm) thick, 4 ft (122 cm) wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400 or V400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 7 in. (178 mm).

2. **Nonmetallic Pipe or Conduit** – One nonmetallic pipe or conduit is centered within the firestop system. Pipe or conduit to be installed near center of stud cavity width and to be rigidly supported on both sides of wall. The following types and sizes of nonmetallic pipes or conduit may be used:
   A. Nom 6 in. (152 mm) diam (or smaller) Schedule 40 solid-core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   C. Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core acrylonitrile-butadiene-styrene (ABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   D. Nom 4 in. (102 mm) diam (or smaller) Schedule 40 fire retardant polypropylene (FRPP) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. Nom 4 in. (102 mm) diam (or smaller) **Rigid Nonmetallic Conduit** formed of PVC.
   F. Nom 1 in. (25 mm) diam (smaller) **Electrical Nonmetallic Tubing** formed of PVC.
   G. Nom 6 in. (152 mm) diam (or smaller) SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – Installed symmetrically on both sides of wall assembly. The hourly F and T Ratings for the firestop system are dependent upon the type and size of nonmetallic pipe or conduit, the piping system type (closed systems such as process or supply piping or vented systems such as drain, waste or vent piping) and the hourly fire rating of the wall assembly in which it is installed, as shown in the following table.

(a) C = closed systems, V = vented systems.

The details of the firestop system shall be as follows.

---

Pipe covering material wrap required on pipe on both sides of wall.

See **Rigid Nonmetallic Conduit** (DZKT) and **Electrical Nonmetallic Tubing** (FKHU) categories in UL Electrical Construction Materials Directory for names of manufacturers.
**A. Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe or conduit (foil side exposed) with the edges butted against the surface of the wall. Sufficient layers of wrap strip shall be installed to lap a min of 3/16 in. (5 mm) on the wall surface around the entire perimeter of the circular through opening. For nom 1/2 in. (13 mm) to nom 2 in. (51 mm) diam pipes or conduits, a min of one layer of wrap strip is required. For nom 2-1/2 in. (64 mm) and nom 3 in. (76 mm) diam pipes, a min of two layers of wrap strip is required. For nom 3-1/2 in. (89 mm) and nom 4 in. (102 mm) diam pipes, a min of three layers of wrap strip is required. For nom 5 and 6 in. (127 and 152 mm) diam, two tiers (4 in. (102 mm) overall length) of three layers of wrap strip is required, with adjoining wrap strip layer edges between tiers tightly butted. Each layer of wrap strip to be installed with butted seam, with butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie or equivalent.

**3M COMPANY – Type FS-195+**

**B. Steel Collar** – Nom 2 or 4 in. (51 or 102 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (No. 30 28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (No. 30 28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer.

Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. With steel collar anchor tabs pressed tightly against wall surface, compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. As an alternate to the stainless steel band clamp, the steel collar may be compressed around nom 4 in. diam (or smaller nonmetallic pipes using two min 16 SWG (0.0625 in. (0.016 mm) diam) steel wires secured with multiple twists. As an alternate to the band clamps or steel wires, collars may be secured by a means No. 10 by 1/2 in. (13 mm) long sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. A min of three screws is required. Secure collar to wall surface with 3/16 in. (5 mm) diam steel toggle bolts in conjunction with min 1-1/2 in. (38 mm) diam steel washers.

Three bolts, symmetrically located, required for 2 in. (51 mm) deep steel collar for nom 1/2 in. (13 mm) to nom 3 in. (76 mm) diam pipes. Four bolts, symmetrically located, required for 2 in. (51 mm) deep steel collar for nom 3-1/2 and 4 in. (89 and 102 mm) diam pipes. Five to seven bolts (every other anchor tab) required for 4 in. (102 mm) deep steel collar for nom 5 and 6 in. (127 and 152 mm) diam pipes. As a final step, bend retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

**C. Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Generous bead of caulk applied to outer perimeter of wrap strip at interface with wall surface and to perimeter of pipe or conduit at its egress from the wrap strip layers.

**3M COMPANY – CP 25WB+ caulk and MP+ Stix putty, IC 15WB+ caulk, FireDam 150+ caulk, or FB-3000 WT sealant**

(Note: L Ratings apply only when CP 25WB+ caulk or FB-3000 WT sealant is used. CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

**D. Pipe Covering** – (Not Shown) – Nom 1 in. (25 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m3) glass fiber units jacketed on the outside with an all service jacket. When required (see table), min 6 in. (152 mm) length of pipe covering installed around PVC pipe at its egress from steel collar on both sides of wall. Pipe covering secured to pipe with steel wire ties spaced max 4 in. (102 mm) OC. Edge of pipe covering abutting steel collar to be sealed with a min 1/4 in (6 mm) diam bead of caulk (Item C).

See **Pipe and Equipment Covering** – **Materials** (BRGU) category in Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

**E. Firestop Device** – (Not shown) – As an alternate to Items A, B and C for nom 1-1/2, 2, 3 or 4 in. (38, 51, 76 or 102 mm) diam nonmetallic pipes, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on both sides of wall in accordance with the accompanying installation instructions.

**3M COMPANY – Types PPD 150, PPD 200, PPD 300, PPD 400**

**Note:** Systems with Nonmetallic Through Penetration(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – 5/8 in. (16 mm) thick, 4 ft (122 cm) wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400 or V400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 3-1/8 in. (79 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered in the through opening. The annular space between pipe or conduit and periphery of opening shall be min 1/4 in. (6 mm) and max 3/8 in. (10 mm). Pipe or conduit to be rigidly supported on both sides of the floor-ceiling assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   B. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller)(Schedule 40 or 80) PVC conduit installed in accordance with the National Electric Code (NFPA No. 70).
   
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   D. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   E. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   F. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – Installed symmetrically on both sides of wall assembly. The hourly F and T Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The details of the firestop system shall be as follows.
   
   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly wrapped around nonmetallic pipe (foil side out) with seam butted. Wrap strip layer securely bound with steel wire or aluminum foil tape and slid into annular space approx 1-1/4 in. (32 mm) such that approx 3/4 in. (19 mm) of the wrap strip protrudes from the wall surface.

   B. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 5/8 in. (16 mm) thickness of caulk or putty applied into annular space between wrap strip and periphery of opening. A nom 1/4 in. (6 mm) diam bead of caulk or putty to be applied to the wrap strip/wall interface and to the exposed edge of the wrap strip layers approx 3/4 in. (19 mm) from the wall surface.

   C. **Foil Tape** – (not shown) – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the wrap strip (Item 3A). Min of one wrap, flush with both sides of wall and proceeding outward. Tape is not required for pipes shown in Items 2A, 2B and 2C.

*Bearing the UL Classification Mark*
1. **Wall Assembly** – The 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening is 6-1/4 in. (159 mm).

2. **Nonmetallic Pipe or Conduit** – One nonmetallic pipe or conduit centered in firestop system. Pipe or conduit to be rigidly supported on both sides of wall. The following types and sizes of nonmetallic pipes or conduit may be used in closed (process or supply) or vented (drain, waste or vent) piping systems:
   A. Nom 4 in. (102 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe.
   B. Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core acrylonitrile butadiene-styrene (ABS) pipe.
   C. Nom 4 in. (102 mm) diam (or smaller) Schedule 40 (or heavier) fire retardant polypropylene (FRPP) pipe.
   D. Nom 4 in. (102 mm) diam (or smaller) **Rigid Nonmetallic Conduit** formed of PVC.
   E. Nom 1 in. (25 mm) diam (or smaller) **Electrical Nonmetallic Tubing** formed of PVC.
   F. Nom 2 in. (51 mm) diam (or smaller) SDR11 (or heavier) polybutylene (PB) pipe.
   G. Nom 3 in. (76 mm) diam (or smaller) SDR13.5 (or heavier) chlorinated polyvinyl chloride (CPVC) pipe (closed piping systems only). See **Rigid Nonmetallic Conduit** (DZKT) and **Electrical Nonmetallic Tubing** (FKHU) categories in Electrical Construction Materials Directory for names of manufacturers.

3. **Firestop System** – Installed symmetrically on both sides of wall assembly. The hourly T Ratings for the firestop system are dependent upon the type and size of nonmetallic pipe or conduit, as tabulated below:

+Pipe covering material wrap required on pipe on both sides of wall.
The details of the firestop system shall be as follows.
A. **Steel Sleeve** – Nom 8 in. (203 mm) long cylindrical sleeve with nom 7/8 in. (22 mm) wide by 1-3/4 in. (44 mm) long anchor tabs and nom 3/4 in. (19 mm) long tabs to retain wrap strip layers (Item B). Sheets of precut 0.016 in. (0.41 mm) thick (30 28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, cylindrical sleeve may be fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Sheet steel formed into cylindrical sleeve with inside diam of steel sleeve and diam of through opening in the gypsum board layers to be equal to outside diam of wrap strip (Item B) layers on pipe (0, +1/8 in. (0.3 mm)). Cylindrical sleeve inserted in annular space around nonmetallic pipe, centered in wall and locked in position by bending the anchor tabs outward 90 deg against the inner layer of gypsum board within the stud cavity. After installation of wrap strip layers (Item B), retainer tabs of cylindrical sleeve bent 90 deg toward pipe on both sides of wall assembly to lock wrap strip layers in position.

B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) and slid into steel sleeve on both sides of wall assembly. For nom 1/2 in. (13 mm) to nom 2 in. (51 mm) diam nonmetallic pipes, one layer of wrap strip is required. For nom 2-1/2 in. (64 mm) and nom 3 in. (76 mm) diam nonmetallic pipes, two layers of wrap strip are required. For nom 3-1/2 in. (89 mm) and nom 4 in. (102 mm) diam nonmetallic pipes, three layers of wrap strip are required. Each layer of wrap strip to be installed with butted seam, with butted seams in successive layers staggered. Wrap strip layers on each side of wall to protrude approx 3/4 in. (19 mm) from wall surface with the exposed edges abutting the retainer tabs of the steel sleeve.

C. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Generous bead applied to outer perimeter of steel sleeve at interface with wall surface and to perimeter of nonmetallic pipe at its egress from the wrap strip layers approx 3/4 in. from the wall surface. **3M COMPANY** – CP 25WB+ caulk or MP+ Stix putty, IC 15WB caulk, FireDam 150+ caulk or FB-3000 WT sealant.
(Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

D. **Pipe Covering** – (Not shown) – Nom 1 in. (25 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m³) glass fiber units jacketed on the outside with an all service jacket. When required (see table), min 6 in. (152 mm) length of pipe covering installed around PVC pipe at its egress from steel collar on both sides of the wall. Pipe covering secured to pipe with steel wire ties spaced max 4 in. (102 mm) OC. Edge of pipe covering abutting wrap strip to be sealed with a min 1/4 in. (6 mm) diam bead of caulk (Item C).

See **Pipe And Equipment Covering** – Materials (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 less and a Smoke Developed Index of 50 or less may be used.

---

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – 5/8 in. (16 mm) thick, 4 ft (122 cm) wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400 or V400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 13-3/4 in. (349 mm).

2. **Nonmetallic Pipe** – Nom 6, 8 or 10 in. (152, 203 or 254 mm) diam Schedule 40 polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste of vent) piping systems. One pipe to be centered in the firestop system. Pipe to be installed near center of stud cavity width and to be rigidly supported on both sides of wall.

3. **Firestop System** – Installed symmetrically on both sides of wall assembly. The hourly F and T Ratings for the firestop system are dependent upon the size of nonmetallic pipe and the hourly fire rating of the wall assembly in which it is installed, as tabulated below:

The details of the firestop system shall be as follows.

A. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Length of steel sleeve shall be equal to thickness of wall plus 9-1/2 in. (241 mm), 10 in. (254 mm) or 11 in. (279 mm) for the 6, 8 and 10 in. (152, 203 and 254 mm) diam pipe sizes, respectively. Inside diam of steel sleeve and diam of through opening in the gypsum wallboard layers to be equal to outside diam of wrap strip (Item B) layers on pipe. Cylindrical sleeve inserted in annular space around nonmetallic pipe and centered in wall. After installation of wrap strip (Item B) layers, min 1/2 in. (13 mm) wide by min 0.028 in. (0.71 mm) thick stainless steel band clamps installed around steel collar on both sides of wall assembly with one band clamp located near the wall surface and another located approx 1 in. (25 mm) from the outer edge of the wrap strip layers. Edges of steel sleeve to be slit approx 1 in. (25 mm) OC around circumference of sleeve on both sides of wall, with length of slits approximately equal to thickness of mat wrap layers, to form retainer tabs. Retainer tabs bent 90 deg toward pipe to lock wrap strip layer(s) in position.
B. Fill, Void or Cavity Materials* – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide by 24 in. (610 mm) long strips. Two stacks of wrap strip (nom 4 in. or 102 mm high stack) tightly-wrapped around nonmetallic pipe on each side of wall and slid into steel sleeve (Item A) such that inner edges are flush with or recessed max 1/4 in. (6 mm) into surface of wall. For nom 6 in. (152 mm) diam pipes, three layers of wrap strip are required in each stack. For nom 8 in. (203 mm) diam pipes, four layers of wrap strip are required in each stack. For nom 10 in. (254 mm) diam pipes, six layers of wrap strip are required in each stack. Each layer of wrap strip to be installed with butted seams, with the butted seams in successive layers staggered. Wrap strips temporarily held in position using aluminum foil tape, filament tape, steel wire tie, or equivalent.

3M COMPANY – Type FS-195+

C. Pipe Covering* – Nom 1 in. (25 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m³) glass fiber units jacketed on the outside with an all service jacket. Min 6 in. (152 mm) length of pipe covering installed around PVC pipe at its egress from the wrap strip layers (Item B) on both sides of the wall. Pipe covering secured to pipe with steel wire ties spaced max 4 in. (102 mm) OC. Edge of pipe covering abutting wrap strip to be sealed with a min 1/4 in. (6 mm) diam bead of caulk (Item D).

See Pipe And Equipment Covering – Materials (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

D. Fill, Void or Cavity Materials* – Caulk or Sealant – Generous bead of caulk to be applied to outer perimeter of steel sleeve at interface with wall surfaces and to perimeter of pipe covering material wrap at its interface with the wrap strip layers.

3M COMPANY – CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant

1. **Wall Assembly** – The fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 in. by 4 in. (51 mm by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall or Partition Design in the UL Fire Resistance Directory. Max diam of opening is 7 in. (178 mm).

2. **Through Penetrants** – **Glass Pipe** – 1/2 in., 3/4 in., 1 in., 1-1/2 in., 2 in., 3 in., 4 in. or 6 in. diam (13 mm, 19 mm, 25 mm, 51 mm, 76 mm, 102 mm or 152 mm) glass pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. Max one glass pipe per opening. Pipe to be rigidly supported on both sides of wall assembly. Pipe couplings to be located min 12 in. (305 mm) from wall surfaces. A clearance of 1/4 in. to 3/8 in. (6 mm to 10 mm) is required between the glass pipe and the sides of the cutouts made in the gypsum board wall.

**SCHOTT SCIENTIFIC GLASS**

3. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly wrapped around pipe (foil side out) with seam butted. Wrap strip layer securely bound with steel wire or aluminum foil tape and slid into annular space approx 1-1/4 in. (32 mm) such that approx 3/4 in. (19 mm) of the wrap strip width protrudes from the wall surface. Wrap strip installed symmetrically on both sides of the wall assembly.

**3M COMPANY – FS-195+**

4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. (6 mm) diam continuous bead applied to leading edge of wrap strip layer (Item 3) prior to insertion of wrap strip layer into annular space. After insertion of wrap strip layer in annular space, a nom 1/4 in. (6 mm) diam continuous bead is to be applied to the wrap strip/wall interface and to the exposed edge of the wrap strip layer located approx 3/4 in. (19 mm) from the wall surface. When armored glass process pipe is used, the pipe should be wrapped with a 2 to 3 mil thick pressure-sensitive aluminum foil tape to prevent contact between the caulk fill material and the armored pipe.

**3M COMPANY – CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant**

**Wall Assembly** – The fire-rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Studs** – Steel studs to be min 3-5/8 in. (92 mm) deep and spaced max 24 in. (610 mm) OC. The opening in the wall to accommodate the pipes (Item 2) shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end. The framed opening in the wall shall be max 22-1/2 in. (572 mm) wide and 8 in. (203 mm) high.

B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design.

2. **Nonmetallic Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems or SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. A min separation of 2 in. (51 mm) shall be maintained between pipes and between pipes and periphery of opening. Pipes to be rigidly supported on both sides of wall assembly.

3. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide wrap strip tightly-wrapped around each PVC pipe (foil side exposed) and secured in place with steel wire ties. Wrap strips to project approx 7/8 in. (22 mm) beyond each face of the intumescent sheet (Item 4) on each side of wall.

4. **Fill, Void or Cavity Materials** – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv sheet steel backer. Sheets cut to tightly-follow the contours of the wrap strip (Item 3) on each PVC pipe. Sheets cut to lap a min of 2 in. (51 mm) on the wall on all sides of the opening on both sides of the wall. Prior to installation, a min 1/4 in. (6 mm) diam bead of caulk (Item 6) shall be applied as a gasket approx 1 in. (25 mm) from and on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of butted seams or slits made to permit installation of the sheet around the individual pipes.

5. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (26 gauge) galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 4). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulk (Item 6). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

6. **Fill, Void or Cavity Materials** – Graphite Seal, Caulk, Sealant or Putty – One layer of 1/2 in. x 1/16 in. (13 mm x 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Generous application of caulk to be applied around base of wrap strip at its egress from the intumescent sheet on each side of wall assembly. An additional bead of caulk shall be applied to the exposed edge of each wrap strip layer.

*3M COMPANY* – E-FIS, Ultra GS seals, CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix Putty (Note: CP 25WB+ not suitable for use with CPVC pipes.)

**Note:** Systems with Nonmetallic Through Penetration(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Wall Assembly** – The fire-rated gypsum board/steel stud wall assembly shall be constructed of materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Steel Studs** – Steel studs to be min 3-5/8 in. (92 mm) deep and spaced max 24 in. (610 mm) OC. The opening in the wall to accommodate the ENT (Item 2) shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end. The framed opening in the wall shall be max 22-1/2 in. (57 mm) wide and 8 in. (203 mm) high.
   B. **Gypsum Board*** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design.

2. **Electrical Nonmetallic Tubing**# – Nom 2 in. (51 mm) diam (or smaller) ENT constructed of polyvinyl chloride (PVC). Min separation between ENT is 2 in. (51 mm) Min clearance between ENT and perimeter of framed opening in wall is 2 in. (51 mm) ENT to be rigidly supported on both sides of wall assembly. Ends of ENT to terminate in air tight junction boxes. See Electrical Nonmetallic Tubing (FKHU) category in Electrical Construction Materials Directory for names of manufacturers.

3. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (26 gauge) galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 5). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulking (Item 7). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

4. **Fill, Void or Cavity Materials*** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheets cut to tightly-follow the contours of the wrap strip (Item 4) around each ENT. Sheets cut to lap a min of 2 in. (51 mm) on the wall on all sides of the opening on both sides of the wall. Prior to installation, a min 1/4 in. (6 mm) diam bead of caulking (Item 7) shall be applied as a gasket approx 1 in. (25 mm) from and on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of batted seams or slits made to permit installation of the sheet around the ENT.

5. **Fill, Void or Cavity Materials*** – **Graphite Seal, Caulk, Sealant or Putty** – One layer of 1/2 in. x 1/16 in. (13 mm x 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulking or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Generous application of caulking to be applied around the base of each contour applied wrap strip at its egress from the intumescent sheet on both sides of the wall assembly. An additional bead of caulking shall be applied to the exposed edge of each wrap strip.

---

1. **Wall Assembly** – The fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Diam of opening cut in gypsum board layers on each side of wall assembly to be 1/2 in. to 3/4 in. (13 mm to 19 mm) larger than outside diam of ENT (Item 2) such that, when installed, a 1/4 in. to 3/8 in. (6 mm to 10 mm) annular space will be present between the ENT and the gypsum board around the entire circumference of the opening. Max diam of opening is 3 in. (76 mm).

2. **Electrical Nonmetallic Tubing** – Nom 2 in. (51 mm) diam (or smaller) ENT constructed of polyvinyl chloride (PVC). One ENT centered in circular openings in gypsum board layers and rigidly supported on both sides of the wall assembly.

3. **Fiber Optic Cable** – Multiple fiber optical communication cable jacketed with PVC and having a max outside diam of 5/8 in. (16 mm).

4. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly wrapped around (foil side out) with seam butted. Wrap strip layer securely bound with steel wire or aluminum foil tape and slid into annular space approx 1-1/4 in. (32 mm) such that approx 3/4 in. (19 mm) of the wrap strip width protrudes from the wall surface on each side of wall assembly.

   **3M COMPANY** – FS-195+

5. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/4 in. (6 mm) diam continuous bead applied to leading edge of wrap strip layer (Item 4) prior to insertion of wrap strip layer into annular space. After insertion of wrap strip layer in annular space, a nom 1/4 in. (6 mm) diam continuous bead is to be applied to the wrap strip/wall interface and to the exposed edge of the wrap strip approx 3/4 in. (19 mm) from the wall surface on each side of the wall assembly.

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
System tested with a pressure difference of 50 Pa between the exposed and unexposed surfaces with the higher pressure on the exposed surface.

1. **Wall Assembly** – The fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 51 by 102 mm (2 by 4 in.) lumber spaced 406 mm (16 in.) OC. Steel studs to be min 92 mm (3-5/8 in) wide and spaced max 610 mm (24 in.) OC.
   B. **Insulation** – R13 (or higher) glass fiber or mineral fiber batt insulation friction fitted into stud cavity.
   C. **Gypsum Board** – One layer of nom 16 mm (5/8 in.) thick gypsum board, as specified in the individual Wall and Partition Design. Max diam of openings shall be 76 mm (3 in.).

2. **Penetrants** – One nonmetallic pipe or tube per opening, for use in closed (process or supply) or vented (drain, waste or vent) piping systems, installed within stud cavity and connected to tee. Pipe, tee or tube penetrating wall on one side to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe, tee or tube and the edge of the opening shall be min 6 mm (1/4 in.) to max 10 mm (3/8 in.). The following types and sizes of nonmetallic pipes or tubes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 51 mm (2 in.) diam (or smaller) Schedule 40 solid core PVC pipe with PVC tee.
      A1. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 38 mm (1-1/2 in.) diam (or smaller) Schedule 40 solid core ABS pipe with ABS tee.
      A2. **Polyvinyl Chloride-XFR (PVC-XFR) Pipe** – Nom 51 mm (2 in.) diam (or smaller) Schedule 40 solid core PVC-XFR pipe with PVC-XFR tee.
   B. **Crosslinked Polyethylene (PEX) Tubing** – Nom 19 mm (3/4 in.) diam (or smaller) SDR 9 PEX tubing with brass, copper or polysulfone tees.
      B1. **Polyethylene/Aluminum/Polyethylene (PE/AL/PE) Tubing** – Nom 19 mm (3/4 in.) diam (or smaller) PE/AL/PE tubing with brass or copper tees.
      B2. **Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene (PEX/AL/PEX) Tubing** – Nom 19 mm (3/4 in.) diam (or smaller) SDR 9 PEX tubing with brass or copper tees.

3. **Fill, Void or Cavity Material** – **Sealant** – Min 16 mm (5/8 in.) thickness of fill material applied within the annulus, flush with surface of wall.

**3M COMPANY**

**3M FIRE PROTECTION PRODUCTS** – FB-3000 WT sealant

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening shall be a max of 1/8 in. (3.2 mm) larger than the outside diam of nom 2 in. (51 mm) diam (and smaller) nonmetallic pipes or conduits (Item 2) and a max of 1/2 in. (13 mm) larger than the outside diam of nom 2-1/2 in. (64 mm) diam (and larger) nonmetallic pipes or conduits.

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC conduit.

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   F. **Flame Retardant Polypropylene (FRPP) Pipe** – Nom 3 in. (76 mm) diam Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

When nom 3-1/2 or 4 in. (89 or 102 mm) diam pipe is used, T Rating is 0 hr. When nom 3 in. (76 mm) diam (or smaller) pipe is used, the T Rating is equal to the hourly fire rating of the wall assembly in which it is installed.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Foil Tape** – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe or conduit prior to the installation of the wrap strip (Item 3B). Min of one wrap, flush with the wall surfaces on both sides of the wall assembly. Foil tape is not required for solid core PVC and CPVC pipes and conduits.

   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – 1 in. (25 mm) wide, nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil. Wrap strip(s) tightly wrapped around pipe or conduit (foil side exposed) and butted against the wall surfaces on both sides of the wall assembly. Each layer of wrap strip to be installed with butted seam, with butted seams in successive
System No. W-L-2073 continued

layers staggered. Wrap strip(s) temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. The min number of wrap strip layers is dependent on the size of the pipe or conduit as shown below:

<table>
<thead>
<tr>

3M COMPANY – FS-195+

C. Steel Collar – Nom 1 in. (25 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip.

Coils of precut min 0.016 in. (0.41 mm) thick (No. 28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Collar, with anchor tabs bent outward 90 degree, wrapped tightly around wrap strip(s) using a min 1/2 in. (13 mm) wide by min 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. As an alternate to the band clamps, collars may be secured by a means No. 10 by 1/2 in. (13 mm) long sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. A min of three screws is required. Collar anchor tabs pressed tightly against wall surfaces, and secured to wall surfaces with 3/16 in. (5 mm) diam steel toggle bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min three anchor bolts for nom 1/2 to 2 in. (13 to 51 mm) pipes or conduits, min 4 anchor bolts for nom 2-1/2 and 3 in. (64 and 76 mm) pipes or conduits and min 5 anchor bolts for nom 3-1/2 and 4 in. (89 and 102 mm) pipes or conduits, symmetrically located. Retainer tabs bent 90 deg toward pipe to lock wrap strip(s) in position.

D. Fill, Void or Cavity Materials* – Caulk, Sealant or Putty – (Optional – Not Shown) – Generous bead of caulk or putty applied to outer perimeter of wrap strip at interface with wall surfaces and to perimeter of pipe or conduit at its egress from the wrap strip layers.

3M COMPANY – CP 25WB+, MP+ Stix, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant.
(Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

E. Firestop Device* – (Not Shown) – As an alternate to Item A and B when nom 1-1/2, 2, 3 or 4 in. (38, 51, 76 or 102 mm) diam nonmetallic pipes are used, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of top plate or on both sides of wall in accordance with the accompanying installation instructions.

3M COMPANY – PPD 150, PPD 200, PPD 300, PPD 400, PPD 1.5, PPD 2, PPD 3

1. **Wall Assembly** – The fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening to be max 1/2 in. (13 mm) larger than the outside diam of steel sleeve (Item 3A).

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The T Ratings are 0 and 1/2 hr when installed in 1 hr and 2 hr rated walls, respectively.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor or wall assembly. The pipe or conduit may be installed at an angle not greater than 45 degrees from perpendicular. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 (or heavier) solid core or cellular core acrylonitrile butadiene styrene (ABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Metallic Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. (0.48 mm) thick (26 gauge) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Sleeve to extend a min of 2 in. (51 mm) beyond both sides of the wall. The inside diam of the sleeve shall be larger than outside diam of nonmetallic pipe or conduit such that an annular space will be present between the steel sleeve and the pipe around the entire circumference of the pipe to accommodate the layer(s) of wrap strips (Item 3B). The annular space between the outside of the wrap strip layer(s) and the inside of the sleeve shall be min 0 in. (0 mm, point contact) to max 1/4 in. (6 mm). The annular space between the outside of the sleeve and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm).
   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) and slid into sleeve on both sides of wall such that the outer edges of wrap strips are flush with the outer edges of the sleeve. For nom 1/2 in. (13 mm) to nom 1-1/2 in. (38 mm) diam pipes, a min of one layer of wrap strip is required. For nom 2 in., 2-1/2 in. and 3 in. (51 mm, 64 mm and 76 mm) diam pipes, a min of two layers of wrap strip is required. For nom 3-1/2 in. and 4 in. (89 and 102 mm) diam pipes, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam with butted seams in successive layers staggered. Wrap strip layers held in position using aluminum foil tape, steel wire tie, or equivalent. A min 1/2 in. (13 mm) wide stainless steel hose clamp shall be secured around the outside of the sleeve over the center of the wrap strips on both ends of the sleeve.

3M COMPANY – Type FS-195+
System No. W-L-2087 continued

C. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min thickness of 5/8 in. (16 mm) and 1-1/4 in. (32 mm) for 1 and 2 hr rated wall assemblies, respectively, applied within annulus between metallic sleeve and periphery of the opening, flush with both surfaces of wall assembly. At the point contact location between sleeve and gypsum board, a min 1/2 in. (13 mm) diam bead of caulk shall be applied at the sleeve/wallboard interface on both surfaces of wall assembly. A min 1/4 in. (6 mm) bead of caulk shall also be applied over the outer edges of the wrap strips and within the annular space between the wrap strip and sleeve on both sides of wall.

**3M COMPANY** – Type CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant. (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   **A. Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   **B. Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening shall be 7/8 in. (22 mm) larger than the outside diam of nonmetallic pipe or conduit (Item 2).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space for max 1-1/4 in. (32 mm) diam pipe or conduit shall be min 0 in. (point contact) to max 7/8 in. (0 mm to max 22 mm). The annular space for pipe or conduit larger than nom 1-1/4 in. (32 mm), diam shall be min 1/2 in. to max 1 in. (13 mm to max 25 mm). Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   **A. Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   **B. Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) piping system.
   
   **C. Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR 11 CPVC pipe for use in closed (process or supply) piping systems.
   
   **D. Rigid Nonmetallic Conduit** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFP A No 70).
   
   **E. Electrical Nonmetallic Tubing (ENT)** – Nom 1 in. (25 mm) diam (or smaller) ENT formed of PVC, installed in accordance with Article 331 of the National Electrical Code (NFP A No. 70).

   See Rigid Nonmetallic Conduit (DZKT) and Electrical Nonmetallic Tubing (FKHU) categories in the UL Electrical Construction Equipment Directory for names of manufacturers.

   **F. Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom. 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   The hourly T Rating is dependent on the hourly rating of the wall assembly, the pipe or conduit size and whether the pipe is intended for use as a closed or vented system, as shown in the following table.

3. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min thickness of 5/8 in. and 1-1/4 in. (16 mm and 32 mm) of caulk or putty for 1 and 2 hr rated wall assemblies, respectively, applied within annulus between pipe or conduit and periphery of the opening, flush with both surfaces of wall assembly. At the point contact location between pipe or conduit and gypsum board, a min 1/2 in. (13 mm) diam bead of caulk or putty shall be applied at the pipe or conduit/wallboard interface on both surfaces of wall assembly.

**3M COMPANY** – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

F Rating – 2 Hr
T Rating – 2 Hr

1. Wall Assembly – The fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.
   B. Gypsum Board* – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max diam of opening is 1-5/8 in. (41 mm).

2. Nonmetallic Pipe – Nom 1 in. (25 mm) diam (or smaller) cross-linked polyethylene (PEX) SDR 9 tubing for use in closed (process or supply) piping systems. One pipe to be centered within the firestop system. A nom annular space of 1/4 in. (6 mm) is required within the firestop system. Pipe to be rigidly supported on both sides of wall assembly.

3. Firestop System – The firestop system shall consist of the following:
   A. Fill, Void or Cavity Materials* – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly wrapped around pipe (foil side out) with seam butted. Wrap strip layer securely bound with steel wire or aluminum foil tape and slid into annular space approx 1-1/4 in. (32 mm) such that approx 3/4 in. (19 mm) of the wrap strip width protrudes from the wall surface on each side of wall assembly.
      3M COMPANY – FS-195+
   B. Fill, Void or Cavity Material* – Caulk, Sealant or Putty – A nom 1/4 in. (6 mm) diam continuous bead is to be applied to the wrap strip/wall interface and to the exposed edge of the wrap strip approx 3/4 in. (19 mm) from the wall surface on each side of the wall assembly.
      3M COMPANY – IC 15WB+, FireDam 150+ caulk, FB-3000 WT sealant or MP+ Stix putty

1. **Wall Assembly** – The 1 or 2 h fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board*** – Nom 5/8 in. (16 mm) thick gypsum board type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of opening is 1-5/8 in. (41 mm).

2. **Nonmetallic Pipe** – For 2 hr walls, nom 1 in. (25 mm) diam (or smaller) cross-linked polyethylene (PEX) SDR 9 tubing for use in closed (process or supply) piping systems. For 1 hr walls, nom 3/8 in. (10 mm) diam cross-linked polyethylene (PEX) SDR 9 tubing for use in closed (process or supply) piping systems. One pipe to be centered within the firestop system. A nom annular space of 1/4 in. (6 mm) is required within the firestop system. Pipe to be rigidly supported on both sides of wall assembly.

3. **Fill, Void or Cavity Material*** – **Caulk, Sealant or Putty** – Fill material installed within annular space between pipe and gypsum board on both sides of wall. For 1 or 2 hr walls with a nom 3/8 in. (10 mm) diam PEX tube, the min depth of caulk or putty within the annular space is 5/8 in. (16 mm). For 2 hr walls with a nom 1 in. (25 mm) diam (or smaller) PEX tube, the min depth of caulk or putty within the annular space is 1-1/4 in. (32 mm). In all cases, a min 1/4 in. (6 mm) diam bead of caulk or putty shall be applied to perimeter of pipe at its egress from each side of wall.

   **3M COMPANY** – CP 25WB+, IC 15WB+, FireDam 150+ caulking, FB-3000 WT sealant or MP+ Stix putty

1. **Wall Assembly** – The fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening shall be a max of 1/8 in. (3.2 mm) larger than the outside diam of nom 2 in. (51 mm) diam (and smaller) nonmetallic pipes or conduits (Item 2) and a max of 1/2 in. (13 mm) larger than the outside diam of nom 2-1/2 in. (64 mm) diam (and larger) nonmetallic pipes or conduits.

   The hourly F and T Ratings of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Nonmetallic Pipe or Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core polyvinylidene fluoride (PVDF) pipe or conduit for use in closed (process or supply) or vented (drain, waste or vent) piping systems. The pipe or conduit shall be centered in the through opening and rigidly supported on both sides of wall assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Foil Tape** – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe or conduit prior to the installation of the wrap strip (Item 3B). Min of one wrap, installed flush with the wall surfaces on both sides of the wall assembly.
   
   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – 2 in. (51 mm) wide, nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil. Wrap strip(s) tightly wrapped around pipe or conduit (foil side exposed) and butted against the wall surfaces on both sides of the wall assembly. Each layer of wrap strip to be installed with butted seam with butted seams in successive layers staggered. Wrap strip(s) temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. The min number of wrap strip layers is dependent on the size of the pipe or conduit as shown below:

<table>

   3M COMPANY – FS-195+

   C. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip. Coils of precut min 0.016 in (0.4 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.4 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip with min 1 in. (25 mm) overlap at seam and compressed around wrap strip(s) using a min 1 in. (13 mm) wide by min 0.028 in. (0.71 mm) thick stainless steel band at the collar midheight. As an alternate to the band clamps, collars may be secured by a means No 10 by 1/2 in. (13 mm) long sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along
the perimeter joint of the collar. A min of three screws is required. Collar anchor tabs pressed tightly against wall surfaces and secured to wall surfaces with 3/16 in. (5 mm) diam steel toggle bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min three anchor bolts for nom 1/2 in. to 2 in. (13 mm to 51 mm) pipes or conduits, min 4 anchor bolts for nom 2-1/2 and 3 in. (64 mm and 76 mm) pipes or conduits and min 6 anchor bolts for nom 3-1/2 in. and 4 in. (89 mm and 102 mm) pipes or conduits, symmetrically located. Retainer tabs bent 90 degree toward pipe to lock wrap strip(s) in position.

D. Fill, Void or Cavity Materials* – Caulk, Sealant or Putty (Optional, Not Shown) – Generous crown of caulk or putty applied to outer perimeter of collar at interface with wall surfaces and to perimeter of pipe or conduit at its egress from wrap strip layers.

3M COMPANY – CP 25WB+, IC 15WB+, FireDam 150+ caulk, FB-3000 WT sealant or MP+ Stix putty

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 7-1/2 in. (191 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Metallic Sleeve** – Cylindrical sleeve fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall plus 1 in. (25 mm) such that, when installed, the ends of the sleeve will project approx 1/2 in. (13 mm) beyond each side of the wall. The diam of the openings cut in the gypsum board layers on each side of the wall assembly to be 1-1/4 in. to 4 in. (32 mm to 102 mm) larger than outside diam of pipe such that, when the sleeve is installed, a min 5/8 in. to max 2 in. (16 mm to 51 mm) annular space will be present between the steel sleeve and the pipe around the entire circumference of the pipe.

3. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within the firestop system. Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR 13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   C. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) piping system.
   
   D. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR 13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   E. **Rigid Nonmetallic Conduit** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   The hourly T Rating is 0 and 3/4 Hr for vented systems in 2 and 1 Hr rated wall assemblies, respectively. The hourly T Rating is equal to the hourly fire rating of the wall assembly for closed systems.

4. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Packing Material** – Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min thickness of 5/8 in. (16 mm) of caulk or putty applied within annulus between pipe or conduit and periphery of the opening, recessed from end of sleeve, flush with both surfaces of wall assembly. A nom 1/2 in. (13 mm) diam bead of caulk or putty shall be applied to the sleeve/wallboard interface around the entire perimeter of the sleeve on both sides of the wall assembly.

   **3M COMPANY** – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty
   
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 1 and 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. (51 mm) lumber spaced 16 in. (406 mm). Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diameter of opening shall be 2 in. (51 mm) larger than the outside diam of nonmetallic pipe or conduit (Item 2).

   The hourly F and T Ratings of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe installed within one nonmetallic pipe and centered within the firestop system. The space between outer pipe and metallic sleeve shall be 1 in. (25 mm). The inner pipe shall be centered within the outer pipe. Nonmetallic spacers shall be used to maintain the inner pipe within the center of the outer pipe at a distance no closer than 10 in. (254 mm) from both wall surfaces. The nom diam of the inner pipe shall be one half the nom diam of the outer pipe. The outer pipe to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes described in Item A may be used for the outer pipe and the following types and sizes of nonmetallic pipes described in Item B may be used for the inner pipe:
   
   A. **Polypropylene (PP) Pipe** – Nom 4 in. or 6 in. (102 mm or 152 mm) diam SDR 32.5 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   B. **Polypropylene (PP) Pipe** – Nom 2 in. or 3 in. (51 mm or 76 mm) diam SDR 11 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Metallic Sleeve** – Nom 28 gauge galvanized steel sleeve friction-fit in wall assembly, extending 2-1/4 in. (57 mm) beyond both wall surfaces. Each end of the sleeve to be provided with 3/4 in. (19 mm) long slits such that the ends of the sleeve are bent 90 degrees toward the pipe to lock the wrap strip layers (Item 3B) in position. A 1/2 in. (13 mm) wide stainless steel hose clamp to be secured around each end of the sleeve, approximately midway between the wall surface and the end of the sleeve.
   
   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Strips tightly wrapped around outer nonmetallic pipe (foil side exposed). Multiple stacks of multiple layers to be butted tightly together with the first layer recessed into sleeve, 3/4 in. (19 mm) from both ends of the sleeve. The min number of layers and stacks of layers required is dependent upon the nom diam of the outer pipe, as shown in the following table:

<table>
<thead>
<tr>
<th>Outer Pipe Nom Diam In. (mm)</th>
<th>No. of Wrap Stack</th>
<th>No. of Wrap Strip Layers For 1st Stack</th>
<th>No. of Wrap Strip Layers For 2nd Stack</th>
<th>No. of Wrap Strip Layers For 3rd Stack</th>

   **3M COMPANY** – FS-195+
**System No. W-L-2099 continued**

C. **Steel Collars** – Nom 2 in. (51 mm) deep collars with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collars, with anchor tabs bent outward 90 degrees, wrapped tightly around second and third stack (if third stack is required) of wrap strip layers and pressed tightly against preceding collar or sleeve with min 1 in. overlap at seam. Anchor tabs for collar to be pressed tightly against preceding collar or sleeve and compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the collar midheight. Anchor tabs to be bent 90 degrees outward and then 90 degrees toward wall, tightly against the preceding collar or sleeve, and secured to the preceding collar or sleeve using 1/2 in. (13 mm) long No. 10 sheet metal screws. Anchor screws to be used with every anchor tab. Retainer tabs 90 degrees toward pipe to lock wrap strip layers in position.

D. **Foil Tape** – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the last stack of wrap strip (Item 3B). Min of one wrap, flush with the next to last stack of wrap strip and proceeding outward.

E. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** (Not Shown/Optional) – Generous bead of caulk or putty may be applied to outer perimeter of sleeve at its interface with wall surfaces.

**3M COMPANY** – CP 25WB+, IC 15WB+, FireDam 150+ caulk, FB-3000 WT sealant or MP+ Stix putty

1. **Wall Assembly** – The fire rated gypsum board/stud wall assembly shall be constructed of the material and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

   **The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.**

2. **Through Penetrating Products** – Glass Pipe – Nom 3 in. (76 mm) diam (or smaller) glass pipe installed concentrically or eccentrically in opening, for use in closed (process or supply) or vented (drain, waste or vent) piping systems. The annular space between pipe and periphery of opening shall be min 5/8 in. to max 1 in. (16 mm to max 25 mm). Pipe to be rigidly supported on both sides of wall assembly. Pipe connections to be located a min 3 in. (76 mm) from wall surfaces.

   **SCHOTT SCIENTIFIC GLASS**

3. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min thickness of 5/8 in. and 1-1/4 in. (16 mm and 32 mm) for 1 and 2 hr rated wall assemblies, respectively, applied within annulus between pipe or conduit and periphery of the opening, flush with both surfaces of wall assembly.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulking or FB-3000 WT sealant

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 3 in. (76 mm).

   The hourly F and T Ratings of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Crosslinked Polyethylene (PEX) Tubing** – Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping systems. Max three tubes per opening, tightly bundled. The annular space between tubing and periphery of opening shall be min 0 in. (0 mm) (point contact) to max 1 in. (25 mm). Tubing to be rigidly supported on both sides of wall assembly.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with each surface of wall. Min 5/8 in. (16 mm) thickness of fill material applied into interstices of tubes on both sides of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the tubing/wallboard interface at the point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

System No. W-L-2147
November 20, 2009
F Rating – 1 And 2 Hr (See Item 1)
T Rating – 1 And 2 Hr (See Item 1)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

   The hourly F and T Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (32 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).
   
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against both surfaces of the wall. The min number of layers required is dependent upon the nom diam of the pipe. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. (64 and 76 mm) diam pipes, two layers are required. For nom 3-1/2 in. and 4 in. (89 and 102 mm) diam pipes, three layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.
   
   B. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against wall surfaces, and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (.71 mm) thick stainless steel band clamp at the
non-Metallic Pipes

Through Penetrations

2000 Series

Gypsum

middle of collar. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (152 by 10 mm) long self-tapping steel screws. Collar to be secured to wall surfaces with 3/16 in. (5 mm) diam steel toggle bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam (and smaller) and nom 4 in. (102 mm) diam (and smaller), pipes, respectively.

C. Fill, Void or Cavity Materials* – Caulk, Sealant or Putty – (Not Shown) – Min 1/2 in. (13 mm) diam bead of caulk or putty shall be applied to outer perimeter of collar at its interface with wall surface(s).

3M COMPANY – CP 25WB+ caulk, MP+ putty, IC 15WB caulk, FireDam 50+ caulk or FB-3000 WT sealant.
(Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

D. Firestop Device* – As an alternate to Items 3A and 3B, firestop device to be installed in accordance with the accompanying installation instructions. Firestop device to be installed and latched around pipe and secured to both sides of wall with Ultra Fast Anchors Straps or with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel toggle bolts in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor straps or anchor bolts symmetrically located, for nom 2 in., 3 in. and 4 in. (51 mm, 76 mm, and 102 mm) diam pipe respectively.

3M COMPANY – Ultra RC Pack 2.0, 3.0, 4.0

1. **Wall Assembly** – The 1 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 2-3/4 in. (70 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 3/16 in. (5 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – Wrapping Strip – Nom 1/8 in. (3 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. One layer of wrap strip tightly wrapped around nonmetallic pipe with end tightly butted and held in place with 2 in. (51 mm) wide min 3 mil foil tape. Wrap strip to be slid into annular space on both sides of wall such that 1/2 to 3/4 in. (13 to 19 mm) of wrap strip extends beyond both surfaces of the wall. Min 18 gauge steel wire tie to be secured around middle of extending portion of wrap strip.
   B. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk shall be applied within annular space on both sides of wall. An additional min 1/8 in. (3 mm) bead of caulk shall be applied at the exposed end of wrap strip at the pipe/wrap strip interface on both sides of wall.

*Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.*

1. **Wall Assembly** – The 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 3 in. (76 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 3/8 in. (10 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Two continuous layers of wrap strip tightly wrapped around nonmetallic pipe and held in place with 2 in. (51 mm) wide min 3 mil foil tape. Wrap strip to be slid into annular space on both sides of wall such that 3/8 (10 mm) to 1/2 in. (13 mm) of wrap strip extends beyond both surfaces of the wall. Min 18 gauge steel wire tie to be secured around middle of extending portion of wrap strip.

   3M COMP ANY – Ultra GS

   B. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk shall be applied within annular space on both sides of wall. An additional min 1/4 in. (6 mm) bead of caulk shall be applied at the exposed end of wrap strip at the pipe/wrap strip interface on both sides of wall.

   3M COMP ANY – CP 25WB+ caulk, IC 15WB+ caulk, FireDam 150+ caulk or FB-3000 WT sealant.

   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diameter of opening is 6-3/4 in. (171.5 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/8 in. (3.2 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 6 in. (152 mm) diameter (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit** – Nom 6 in. (152 mm) diameter (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 6 in. (152 mm) diameter (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 6 in. (152 mm) diameter (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 6 in. (152 mm) diameter (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Min 1/2 in. (13 mm) thickness of caulk or putty shall be applied within annular space on both sides of wall, flush with both wall surfaces.

   3M COMPANY – CP 25WB+ caulk, MP+ Stix putty, IC 15WB+ caulk, FireDam 150+ caulk or FB-3000 WT sealant.

   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

   B. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips.

   Min four continuous layers of wrap strip tightly wrapped around nonmetallic pipe on both sides of the wall and butted tightly against the wall surfaces. An additional stack of four continuous layers of wrap strip tightly wrapped around nonmetallic pipe on both sides of the wall and butted tightly against the first layers of wrap strip.

   3M COMPANY – Ultra GS

   C. **Steel Collar** – Two nom 2 in. (51 mm) deep collars with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tab to retain wrap strip layers. Coils of precut 0.016 in. (.41 mm) thick (28 gauge) galvanized sheet steel available from wrap strip manufacturer. As an alternate, collars may be field-fabricated from min 0.016 in. (.41 mm) thick (28 gauge) galvanized sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collars wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seams, with anchor tabs bent outward 90 degrees for inner collars for securement to wall. Anchor tabs for outer collars to overlap onto inner collars. Collars to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (.71 mm) thick stainless steel band clamp at each collar’s midheight. An additional min 1/2 in. (13 mm) wide by 0.028 in. thick stainless steel band clamp to be tightly fastened around collars at the point where anchor tabs of outer collars overlap onto inner collars. Inner collars to be secured to wall surfaces with 3/16 in. (5 mm) diameter steel toggle bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diameter steel fender washers. Min of six anchor bolts, symmetrically located, required.

1. **Wall Assembly** — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** — Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diameter of opening is 7-3/4 in. (196.9 mm).

   The hourly F and T Ratings of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** — One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 6 in. (152 mm) diameter (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit**++ — Nom 6 in. (152 mm) diameter (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 6 in. (152 mm) diameter (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** — The details of the firestop system shall be as follows:

   A. **Steel Sleeve** — Minimum 26 gauge galvanized steel cut 6 in. (152 mm) longer than overall width of wall with a min 1 in. (25 mm) overlap along longitudinal seam. Sleeve placed in wall opening such that 3 in. (76 mm) extends beyond both sides of wall. Edges of sleeve to be provided with 1/2 in. (13 mm) long slits to form retaining tabs.

   B. **Fill, Void or Cavity Materials*** — **Wrap Strip** — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min four continuous layers of wrap strip tightly wrapped around nonmetallic pipe on both sides of the wall, and recessed within steel sleeve 2-1/2 in. (64 mm) from the end of sleeve on both sides of wall. An additional stack of four continuous layers of wrap strip tightly wrapped around nonmetallic pipe on both sides of the wall and butted tightly against the first layers of wrap strip and recessed 1/2 in. (13 mm) from each end of sleeve. The slit edges of sleeve to be bent 90 degrees toward pipe. Two min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamps shall be tightly fastened around sleeve on both sides of wall, approximately 1/2 in. (13 mm) from the wall surfaces and 3/4 in. (19 mm) from each end of sleeve.

3M COMPANY — **Ultra GS**

   C. **Fill, Void or Cavity Materials*** — **Caulk or Sealant** — Min 1/2 in. (13 mm) diameter bead of caulk shall be applied to outer perimeter of sleeve on both sides of wall at sleeve/wall interface. Min 1/4 in. (6 mm) diameter bead of caulk shall be applied to outer perimeter of penetrant on both sides of wall at penetrant/wrap strip interface (not shown).

3M COMPANY — CP 25WB+ caulk, IC 15WB+ caulk, FireDam 150+ caulk or FB-3000 WT sealant. (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 1, 2 or 3 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC. When wood studs are used, the assembly is limited to 1 and 2 hr. ratings.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be centered within opening with a nom 1/4 in. (6 mm) annular space between pipe or conduit and periphery of opening. Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit**++ – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   F. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom. 4 in. (102 mm) diam (or smaller) Schedule 40 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   The T Ratings are 1, 2 and 3 Hr for pipes A, B and C in 1, 2 and 3 Hr rated wall assemblies, respectively. The T Ratings for pipe D, E and F are 1 Hr in 1 and 2 Hr rated wall assemblies and 2 Hr in 3 Hr rated wall assemblies.

3. **Firestop Device** – **Collar** – Collar to be installed in accordance with the accompanying installation instructions. Collar to be installed and latched around pipe and secured to both sides of wall with 3M Ultra Fast Anchor Straps or with 1/4 in. (6 mm) diam by min 1-1/2 in. (38 mm) long steel toggle bolts in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor straps or anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam and nom 4 in. (102 mm) diam pipes, respectively.

   **3M COMPANY** – Ultra PPD 1.5, 2.0, 3.0 and 4.0

4. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – (Optional, Not Shown) – Generous bead of caulk or putty may be applied to outer perimeter of collar at its interface with wall surfaces.

   **3M COMPANY** – CP 25WB+ caulk, MP+ Stix putty, IC 15WB+ caulk, FireDam 150+ caulk or FB-3000 WT sealant.

   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. lumber spaced 16 in. OC. Steel studs to be min 2-1/2 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – One layer of 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening is 2-1/4 in.

2. **Through Penetrants** – One nonmetallic pipe or conduit for use in closed (process or supply) or vented (drain, waste or vent) piping systems, installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and the edge of the opening shall be min 3/8 in. to max 13/16 in. Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3/4 in. diam (or smaller) Schedule 40 solid core PVC pipe.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3/4 in. diam (or smaller) SDR13.5 CPVC pipe.

3. **Fill, Void or Cavity Material** – **Sealant** – Min thickness of 5/8 in. of fill material applied within annulus between pipe or conduit and periphery of the opening, flush with both surfaces of wall assembly.
   - **3M COMPANY** – FB-1000 NS or FB-3000 WT sealant

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   **A. Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   **B. Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

   The hourly F Rating and T Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** – Nom 2 in. (51 mm) diam (or smaller) SDR 11, or nom 4 in. (102 mm) diam (or smaller) SDR 32.5 polyvinylidene fluoride (PVDF) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. One pipe to be centered within opening with a nom 1/4 in. (6 mm) annular space between pipe and periphery of opening. Pipe to be rigidly supported on both sides of the wall assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:
   
   **A. Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against both surfaces of the wall. The min number of layers required is dependent upon the nom diam of the pipe. For nom 2 in. (51 mm) diam (and smaller) pipes, two layers are required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes, three layers are required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes, four layers are required. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

   **3M COMPANY – Ultra GS**

   **B. Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90°, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against wall surfaces, and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the middle of collar. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (10 mm) long self-tapping steel screws. Collar to be secured to wall surfaces with 3/16 in. (5 mm) diam steel toggle bolts in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam (and smaller) and nom 4 in. (102 mm) diam (and smaller), pipes, respectively.

   **C. Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Min 1/2 in. (13 mm) diam bead of caulk or putty shall be applied to outer perimeter of collar at its interface with wall surface(s).

   **3M COMPANY – CP 25WB+, IC 15WB+, FireDam 150+ caulk, FB-3000 WT sealant or MP+ Stix putty**

1. **Wall Assembly** – The 1 and 2 hr fire rated gypsum board/stud wall assemblies shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening shall be 1 in. (25 mm) larger than nom pipe diam.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and periphery of opening shall be min of 0 in. (0 mm, point contact) to max 5/8 in. (16 mm). Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller). Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   C. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller). Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller). Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   The hourly T Rating of the firestop system is 0 Hr when pipes are used in vented (drain, waste or vent) piping systems. The hourly T Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed when pipes are used in closed (process or supply) piping systems.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min thickness of 5/8 in. (16 mm) of caulked applied within annulus between pipe or conduit and periphery of the opening, flush with both surfaces of wall assembly. At the point contact location between pipe or conduit and gypsum board, a min 1/2 in. (13 mm) diam bead of caulk or putty shall be applied at the pipe or conduit/gypsum board interface on both surfaces of wall assembly.

   **3M COMPANY** – FireDam 150+, CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.

   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 4 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of min 3-1/2 in. (89 mm) wide steel channel studs spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 3 in.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and periphery of opening shall be min of 1/4 in. to max 7/8 in. (4 mm to max 22 mm). Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   C. **Rigid Nonmetallic Conduit** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller). Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Two continuous layers of wrap strip tightly wrapped around nonmetallic pipe and held in place with 2 in. (51 mm) wide min 3 mil foil tape. Wrap strip to be slid into annular space on both sides of wall such that a 1/4 in. (6 mm) of wrap strip extends beyond both surfaces of the wall.
   3M COMPANY – Ultra GS
   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min thickness of 5/8 in. (16 mm) of caulk applied within annulus between wrap strip and periphery of the opening, flush with both surfaces of wall assembly. An additional 1/4 in. (6 mm) diam bead of caulk applied at the wrap strip/gypsum board interface on both sides of wall.
   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant (Note: CP 25WB+ not suitable for use with CPVC pipes.)

F Rating – 4 Hr
T Rating – 4 Hr

1. **Wall Assembly** – The 4 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. The annular space between the pipe or conduit and periphery of opening shall be min of 0 in. (point contact) to max 1/2 in. (0 mm to max 13 mm). In all cases, the firestop device (Item 3) shall entirely cover the annular space. Pipe or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   C. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller). Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   F. **Polyvinylidene Fluoride (PVDF) Pipe** – Nom. 4 in. (102 mm) diam (or smaller) Schedule 40 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop Device - Collar** – Collar to be installed in accordance with the accompanying installation instructions. Collar to be installed and latched around pipe and secured to both sides of wall with 3M Ultra Fast Anchor Straps. Min of two, three or four anchor straps symmetrically located, for nom 2 in. diam (and smaller), nom 3 in. diam and nom 4 in. (51 mm, 76 mm and 102 mm) diam pipes, respectively.

4. **Fill, Void or Cavity Materials** – **Caulk or Sealant** (Optional, not shown) – As an option, caulk may be applied within annulus between the pipe and the periphery of the opening prior to the installation of the collar (Item 3). An additional bead of caulk may be applied at the collar/gypsum board interface on both sides of wall.

System No. W-L-2299
May 19, 2005
F Ratings – 1 & 2 Hr (See Item 1)
T Rating – 0 Hr

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. wide (89 mm) spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 3-1/2 in. (89 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe or conduit installed eccentrically or concentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 1-1/8 in. (0 mm to max 29 mm). Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   C. **Rigid Nonmetallic Conduit+** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   E. **Electrical Nonmetallic Tubing (ENT)+** – Nom 1-1/4 in (32 mm) diam (or smaller) ENT installed in accordance with Article 331 of the National Electrical Code (NFPA No. 70).

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.

   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 4 in. (102 mm).

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 1/2 Hr for 1 and 2 Hr rated assemblies, respectively.

2. **Through Penetrants** – One or more nonmetallic pipes, conduits or tubes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Space between penetrants shall be min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit++** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.
   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing to consist of nom 2 in. by 6 in. (51 mm by 152 mm) (or larger) wood studs or doubled or staggered non 2 in. by 4 in. (51 mm by 102 mm) (or larger) wood studs spaced in accordance with the individual U300 Series Wall and Partition Designs.
   B. **Insulation** – R13 (or higher) glass fiber or mineral fiber batt insulation friction fitted into stud cavity.
   C. **Gypsum Board** – One layer of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

2. **Piping System** – One Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe with PVC tee clean-out for use in closed (process or supply) or vented (drain, waste or vent) piping systems, installed within stud cavity. PVC clean-out to be located behind opening in gypsum board.

3. **Fill, Void or Cavity Material** – Caulk, Sealant or Putty – Min 1/2 in. (13 mm) diam of fill material applied completely around perimeter of opening.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk, FB-3000 WT sealant or MPP+ putty

4. **Cover Plate** – Min 6-1/2 in. (165 mm) diam 24 gauge (or heavier) stainless steel cover plate secured to PVC clean-out with stainless steel screw through center of plate. Cover plate to be tightened squarely to wall and shall overlap surface of gypsum board a min 3/4 in. (19 mm) around entire perimeter of opening.

System No. W-L-2356

May 19, 2005

F Rating – 2 Hr

T Rating – 0 Hr

1. **Wall Assembly** – The 2 hr fire-rated shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Steel Studs** – C-H-shaped studs, 2-1/2 in. wide by 1-1/2 in. (64 mm wide by 38 mm) deep, spaced 24 in. (610 mm) OC.

   B. **Gypsum Board** – 1 in. (25 mm) thick gypsum board liner panels, supplied in nom 24 in. (610 mm) widths as specified in the individual Wall and Partition Design. Max diam of opening is 3 in. (76 mm).

   C. **Gypsum Board** – Two layers of 5/8 in. (16 mm) thick gypsum board as specified in the individual Wall and Partition Design. Max diam of opening is 3 in. (76 mm).

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. (0.49 mm) thick (28 gauge) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall or up to 2 in. (51 mm) longer than the thickness of wall such that, when installed, the ends of the sleeve will be flush with wall surface or project up to 1 in. (25 mm) beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the max 3 in. (76 mm) diam through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers.

3. **Through Penetrants** – One nonmetallic pipe or conduit concentrically or eccentrically within the firestop system. The annular space between penetrant and sleeve shall be min 1/8 in. to max 1/2 in. (3.2 mm to 13 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit++** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min one layer of wrap strip tightly wrapped around nonmetallic pipe and held in position using foil tape. Wrap strip to be recessed from finished surface of wall (Item 1C) approx 1-3/4 in. (44 mm) such that the leading edge of wrap strip is flush with inner surface of gypsum board liner panel (Item 1B).

   3M COMPANY – Ultra GS

   B. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from finished surface of wall to accommodate the required thickness of fill material.

   C. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with finished surface of wall assembly.

   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 4-1/2 in. (114 mm).

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 2 hr for one and 2 hr rated assemblies, respectively.

2. **Through Penetrants** – One nonmetallic pipe or conduit concentrically or eccentrically within the firestop system. The annular space between penetrant and sleeve shall be min 3/8 in. (10 mm) to max 5/8 in. (16 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** - The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min three layers of wrap strip tightly wrapped around nonmetallic pipe and completely wrapped with min 3 mil foil tape. Wrap strip to be slid into opening such that the outer edge of wrap strip extends approx 1/2 in. from both surfaces of wall.
   **3M COMPANY** – Ultra GS
   B. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to gypsum board/wrap strip interface at point contact location on both sides of wall.
   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) (or larger) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 5 in. (127 mm).

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed concentrically or eccentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 1/2 in. (13 mm). Pipe or conduit to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Rigid Nonmetallic Conduit** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply).
   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   E. **Fire Retardant Polypropylene (FRPP) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Nonmetallic Pipe Coupling** – Pipe coupling to be of the same size and type of pipe or conduit and installed such that one end of the coupling is flush with either side of the wall assembly and extending outward.

4. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against both surfaces of the wall. Min number of layers required is dependent upon the nom diam of the pipe. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. (64 and 76 mm) diam pipes, two layers are required. For nom 3-1/2 in. and 4 in. (89 and 102 mm) diam pipes, three layers are required. The min number of layers required shall be increased by one layer for the wrap strip installed over the pipe coupling (Item 3). Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.
   B. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against wall surfaces, and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the middle of collar. Collar to be secured to wall surfaces with min 3/16 in. (5 mm) diam steel toggle bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel washers. Min of two, three or four anchor bolts, symmetrically located, for nom 2 in. (51 mm) diam (and smaller), nom 3 in. (76 mm) diam (and smaller) and nom 4 in. (102 mm) diam (and smaller), pipes, respectively.
   C. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 1/2 in. (13 mm) diam bead of caulk or putty shall be applied to outer perimeter of collar at the collar/gypsum board interface on both sides of wall.

Reprinted from the Online Certifications Directory with permission from Underwriters Laboratories Inc. Copyright © 2011 Underwriters Laboratories Inc.®
1. **Wall Assembly** — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing may consist of either wood or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 98.5 in.² (635 cm²) with a max dimension of 12-1/8 in. (308 mm) for square devices. Max diam of opening is 2-1/4 in. (57 mm) for nom 2 in. (51 mm) round devices and 4-1/4 in. (108 mm) for 4 in. (102 mm) round devices.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** — One or more nonmetallic pipes, conduits or tubes, as described in a single line item below, may be installed concentrically or eccentrically within each firestop device (Item 3A) without any limitations on annular space. If multiple through penetrations are installed within the firestop device, the through penetrants may be bundled together. Through penetrants to be rigidly supported on both sides of wall assembly. The following types and sizes of through penetrants may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** — One nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit** — One nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   See **Rigid Nonmetallic, Schedule 40 and 80 PVC Conduit** (DZYR) category in the Electrical Construction Equipment Directory for names of manufacturers.

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — One nom 2 in. (51 mm) diam (or smaller) SDR11 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Crosslinked Polyethylene (PEX) Tubing** — One nom 2 in. (51 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping systems.

   E. **Electrical Nonmetallic Tubing (ENT)** — Max four nom 1-1/4 in. (32 mm) diam (or smaller) ENT installed in accordance with the National Electrical Code (NFPA No. 70).

   See **Electrical Nonmetallic Tubing** (FKHU) category in the Electrical Construction Equipment Directory for names of manufacturers.

   F. **Optical Fiber/Communications/Signaling/Coaxial Cable Raceways** — Max four nom 1-1/4 in. (32 mm) diam (or smaller) plenum rated raceways installed in accordance with the National Electrical Code (NFPA No. 70).

   See **Optical Fiber/Communications/Signaling/Coaxial Cable Raceway** (QAZM) category in the Electrical Construction Equipment Directory for names of manufacturers.

   G. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid or cellular core ABS for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
System No. W-L-2448 continued

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Firestop Device**— A max of six square firestop devices may be ganged together. As an alternate, one round device may be centered within a round opening. Each device consists of a nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), a nom 4 by 4 by 10 in. (102 by 102 by 254 mm), a nom 2 in. (51 mm) diam by 10 in. (254 mm) or a nom 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device(s) to be installed within opening with ends projecting an equal distance beyond each surface of wall assembly in accordance with the accompanying installation instructions. The annular space between device(s) and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1/8 in. (3 mm). Firestop device(s) secured in place by means of fill material (Item 3B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of wall after installation of fill material, and secured together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the through penetrant(s) and installed flush with each end of device on both sides of wall assembly. The foam plug in one or both ends of the device is optional except when L Rating is required (See Item 3B).

   **3M COMPANY** — 3M Fire Barrier Pass-Through Device

   B. **Fill, Void or Cavity Materials** — Putty or Caulk — Min 1/8 in. (3 mm) bead of fill material shall be applied at interface of gypsum board and firestop devices immediately prior to the installation of the mounting flanges. As an option, foam plugs may be recessed into device and the recess filled with fill material flush with the ends of the device. If three or less devices (Item 3A) are ganged together, the fill material may be optional. L Rating applies only when fill material is applied at interface of gypsum board and device(s) prior to mounting flanges and with both ends of firestop device(s) filled with nominal 1/8 in. (3.2 mm) of Moldable Putty+.

   **3M COMPANY** — Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT. CP 25WB+ not suitable for use with CPVC pipes.

* Bearings the UL Listing Mark

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall incorporate the following construction features:

   A. **Steel Studs** – “C-H” or “C-T” shaped studs, min 2-1/2 in. (64 mm) wide by 1-1/2 in. (38 mm) deep, fabricated from min No. 25 gauge (0.6 mm thick) galv steel, spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board*** – 1 in. (25 mm) thick, 24 in. (610 mm) wide gypsum liner panels installed vertically. Max diam of circular cutout in gypsum liner panel is 4-1/2 in. (114 mm).

   C. **Gypsum Board*** – 1/2 in. or 5/8 in. (13 or 16 mm) thick, 48 in. (1.2 m) wide gypsum boards. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of circular cutout in gypsum board is 4-1/2 in. (114 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One or more nonmetallic pipes, conduits or tubes installed concentrically or eccentrically within opening. Annular space between penetrants and periphery of opening to be min 1/4 in. (6 mm) to max 1 in. (25 mm). Space between penetrants shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Penetrants to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 1 in. (25 mm) diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit**++ – Nom 1 in. (25 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1 in. (25 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping systems.

3. **Fill, Void or Cavity Materials*** – Caulk or Sealant – Caulk or sealant applied within annulus at a thickness equal to the total thickness of the gypsum board on both sides of the wall.

   **3M COMPANY** – CP 25WB+ or FB-3000 WT sealant (Note: CP 25WB+ Caulk not suitable for use with CPVC pipes)

   *Bearing the UL Classification Mark

1. **Wall Assembly** – The 1 or 2 Hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Wallboard, Gypsum** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 3 in. (76 mm).
   
   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through-Penetrants** – One nonmetallic pipe, conduit or tubing to be centered within the firestop system. A nom annular space of 5/16 in. (8 mm) is required within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes, conduits or tubing may be used:
   
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   
   C. **Rigid Nonmetallic Conduit** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).
   
   D. **Crosslinked Polyethylene (PEX) Tubing** – Nom 2 in. (51 mm) diam (or smaller) SDR 7.3 PEX tubing or nom 2 in. (51 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   
   E. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   
   F. **Electrical Nonmetallic Tubing (ENT)** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall electrical nonmetallic tubing (ENT) constructed of PVC and installed in accordance with Article 331 of the National Electrical Code (NFPA 70).

   See Electrical Nonmetallic Tubing (FKHU) category in the Electrical Construction Materials Directory for names of manufacturers.

   G. **Flexible Nonmetallic Conduit, Liquid-Tight (FNMC)** – Nom 2 in. (51 mm) diam (or smaller) corrugated-wall flexible nonmetallic conduit (FNMC) constructed of PVC and installed in accordance with Article 351 of the National Electrical Code (NFPA 70).

   See Flexible Nonmetallic Conduit, Liquid-Tight (DIOQ) category in the Electrical Construction Materials Directory for names of manufacturers.

   The T Rating is 0 Hr and 1-1/2 Hr for 1 and 2 Hr rated assemblies, respectively, for Penetrants A, B and C. The T Rating is 0 Hr and 2 Hr for 1 and 2 Hr rated assemblies, respectively, for Penetrants D, F and G. The T Rating is 0 Hr for Penetrant E.

3. **Fill, Void or Cavity Material** – Sealant – Min 5/8 in. (16 mm) and 1-1/4 in. (32 mm) thicknesses of fill material required for 1 and 2 Hr rated assemblies, respectively, applied within the annulus, flush with both surfaces of wall.

   **3M COMPANY**

   **3M FIRE PROTECTION PRODUCTS** – FB-3000 WT sealant

August 04, 2009
F Ratings – 1 and 2 Hr (See Item 1)
T Ratings – 0 and 1-3/4 Hr (See Item 1)

1. **Wall Assembly** – The 1 and 2 hr fire rated gypsum board/stud wall assemblies shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 1-3/4 hr for 1 and 2 hr rated assemblies, respectively.

2. **Crosslink Polyethylene (PEX) Tubing** – Nom 2 in. (51 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping system. Tubing installed concentrically or eccentrically within opening. Annular space between tubing and edge of opening to be min 0 in. to max 1-1/2 in. (38 mm). Tubing to be rigidly supported on both sides of wall assembly.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall assembly. An additional min 1/2 in. (13 mm) bead of fill material applied at the tubing/gypsum board interface at point contact location on both surfaces of wall assembly.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – CP 25WB+, IC 15WB+ or FB-3000 WT

System No. W-L-2551
July 09, 2015

F Ratings — 1 and 2 Hr (See Item 1)
T Ratings — 0, 1 and 2 Hr (See Item 1)

1. Wall Assembly — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. Studs — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

B. Gypsum Board* — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 5 in. (127 mm).

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 1 and 2 hr for 1 and 2 hr rated assemblies, respectively, except that when FRPP pipe (Item 2C) is used together with steel sleeve (Item 1A), T Rating is 0 hr.

1A. Sleeve — (Optional. Not Shown) — Cylindrical sleeve fabricated from min 28 ga galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam friction fit into wall opening, installed flush with or extending max 5/8 in. (16 mm) beyond both wall surfaces.

2. Through Penetrants — One nonmetallic pipe or conduit concentrically or eccentrically within the firestop system. The annular space between penetrant and periphery of opening or sleeve shall be min 3/8 in. (10 mm) to max 5/8 in. (16 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits:

A. Polyvinyl Chloride (PVC) Pipe — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

B. Chlorinated Polyvinyl Chloride (CPVC) Pipe — Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. (See Item 3C below.)

C. Fire Retardant Polypropylene (FRPP) Pipe — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

D. Rigid Nonmetallic Conduit† — Nom 4 in.(102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

3. Firestop System — The firestop system shall consist of the following:

A. Fill, Void or Cavity Materials* - Wrap Strip — Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe and secured with the adhesive closure tab. Wrap strip to be slid into opening or sleeve such that the outer edge of wrap strip extends nom 5/8 in. (16 mm) from both surfaces of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — Tuck-In Wrap Strip WS 200, WS 300 or WS 400

B. Fill, Void or Cavity Material* - Caulk or Sealant — Min 1/4 in. (6 mm) diam bead of sealant applied to gypsum board or sleeve/wrap strip interface on both sides of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+, CP 25WB+ or FB-3000 WT sealant (CP 25WB+ not suitable for use with CPVC pipes).
System No. W-L-2551 continued

C. **Foil Tape (Not Shown)** — Required only when CPVC penetrant (Item 2B) is used. Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip. Foil tape is to be positioned such that it will be centered under the wrap strip material with adhesive side out.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 8 in. (203 mm).
   
   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** – One nom 6 in. (152 mm) diam nonmetallic pipe centered in the firestop system. The annular space between the penetrant and the periphery of opening shall be min 3/8 in. (10 mm) to max 5/8 in. (16 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipe may be used:
   
   A. **Solid Core Polyvinyl Chloride (scPVC) Pipe** – Nom 6 in. (152 mm) diam Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. The hourly T Rating is 1 hr and 2 hr for 1 hr and 2 hr fire rated assemblies, respectively, when Item 2A is used.
   
   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 6 in. (152 mm) diam Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. The hourly T Rating is 1/2 hr and 1 hr for 1 hr and 2 hr fire rated assemblies, respectively, when Item 2B is used.

3. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 3/16 in. (5 mm) thick intumescent material supplied in nom 2-1/2 in. (64 mm) wide strips. Two layers of wrap strip tightly wrapped around nonmetallic pipe and secured with glass fiber-reinforced strapping tape. Wrap strip to be slid into opening such that the outer edge of wrap strip protrudes approx 5/8 in. (16 mm) from both surfaces of wall.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Fire Barrier Tuck-In WS Roll

   B. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 1/4 in. (6 mm) diam bead of sealant applied to gypsum board/wrap strip interface on both sides of wall.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – IC 15WB+, CP 25WB+ or FB-3000 WT sealant

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
System No. W-L-2572
August 16, 2012

ANSI/UL1479 (ASTM E814)
F Ratings – 1 and 2 Hr (See Item 1)
T Ratings – 1 and 2 Hr (See Item 1)

CAN/ULC S115
F Ratings – 1 and 2 Hr (See Item 1)
FT Ratings – 1 and 2 Hr (See Item 1)
FH Ratings – 1 and 2 Hr (See Item 1)
FTH Ratings – 1 and 2 Hr (See Item 1)

System tested with a pressure differential of 2.5 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400, V400 or W400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 5 in. (127 mm).

   The hourly Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrant** – One nonmetallic pipe to be installed concentrically or eccentrically within the firestop system. The annular space between the penetrant and the periphery of opening shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipe may be used:
   A. **Polypropylene (PP) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Aquatherm Fusiotherm SDR 7.4 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Polypropylene (PP) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Aquatherm Climatherm SDR 11 PP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 1/4 in. (6 mm) thickness of fill material applied within the annular space, flush with both surfaces of wall.
   B. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Min three layers of wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against both surfaces of the wall. Wrap strip layers temporarily held in position using aluminum filament tape, foil tape, steel wire tie, or equivalent.
   C. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 1/2 in. (13 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against wall surfaces, and collar to be compressed around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (0.71 mm) thick stainless steel band clamp at the middle of collar. Collar to be secured to wall surfaces with min 3/16 in. (5 mm) diam steel toggle bolts, or equivalent, in conjunction with min 1 in. (25 mm) diam steel washers. Min three anchor bolts, symmetrically located.

System No. W-L-2580
August 07, 2015

ANSI/UL1479 (ASTM E814)
F Ratings — 1 and 2 Hr (See Item 1)
T Ratings — 1 and 2 Hr (See Item 1)

CAN/ULC S115
F Ratings — 1 and 2 Hr (See Item 1)
FT Ratings — 1 and 2 Hr (See Item 1)
FH Ratings — 1 and 2 Hr (See Item 1)
FTH Ratings — 1 and 2 Hr (See Item 1)

System tested with a pressure differential of 50 Pa between the exposed and the unexposed surfaces with the higher pressure on the exposed side.

1. Wall Assembly — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400, V400 or W400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   B. Gypsum Board* — The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 5-1/2 in. (140 mm).
   The hourly F, T, FT, FH and FTH Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. Sleeve — Cylindrical sleeve fabricated from min 28 ga galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam friction fit into wall opening, extending nom 1 in. (25 mm) beyond both wall surfaces.

3. Through Penetrants — One nonmetallic pipe or conduit installed concentrically within the firestop system. The annular space between penetrant and periphery of opening shall be nom 1/2 in. (13 mm). Penetrant to be rigidly supported on both sides of wall assembly. The following types and sizes of nonmetallic pipes or conduits:
   A. Polyvinyl Chloride (PVC) Pipe — Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. Chlorinated Polyvinyl Chloride (CPVC) Pipe — Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   C. Polyvinylidene Fluoride (PVDF) Pipe — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVDF pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   D. Rigid Nonmetallic Conduit+ — Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).

4. Firestop System — The firestop system shall consist of the following:
   A. Fill, Void or Cavity Materials* - Wrap Strip — Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe and secured with the adhesive closure tab. Wrap strip to be slid into sleeved opening at both sides of wall such that the outer edge of wrap strip is recessed 1/2 in. (13 mm) from both ends of sleeve.
   3M COMPANY 3M FIRE PROTECTION PRODUCTS — Tuck-In Wrap Strip
   B. Fill, Void or Cavity Material* — Min 1/2 in. (13 mm) thickness of sealant applied within annulus flush with both ends of sleeve. Min 1/4 in. (6 mm) diam bead of sealant applied to gypsum board/sleeve interface on both sides of wall.
   3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+, Fire Barrier CP 25WB+ or 3000WT sealant. CP 25WB+ not suitable for use with CPVC pipes.
   C. Foil Tape (Not Shown) — Required only when CPVC penetrant (Item 3B) is used. Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape installed around pipe prior to installation of wrap strip. Foil tape is to be positioned such that it will be centered under the wrap strip material with adhesive side out.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** – The fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL fire Resistance Directory and shall include the construction features noted below:

   **A. Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   **B. Gypsum Board** – Nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Maximum diam of opening is 9 in. (229 mm).

   The hourly F and T Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants** – One nonmetallic pipe to be installed either concentrically or eccentrically within the firestop system. The annular space between pipe and the periphery of opening shall be min 3/8 in. (9.5 mm) to a max 3/4 in. (19 mm). The following types and sizes of nonmetallic pipes may be used:

   **A. Polypropylene (PP) Pipe** – Nom 8 in. (200 mm OD) or nom 6 in. (160 mm OD) diam Orion Polystar™ PP-RCT (CT-White) SDR 17 PP pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The firestop system shall consist of the following:

   **A. Fill, Void or Cavity Materials** – **Wrap Strip** – Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Two layers of wrap strip are tightly wrapped around the nonmetallic pipe and secured with aluminum foil tape. Wrap strip is to be installed on both sides of wall and slid into the wall opening such that the outer edge of wrap strip is extending 5/8 in. (16 mm) from both surfaces of wall.

   **B. Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of sealant applied within annular space, flush with both sides of wall.

   *Indicates such products shall bear the UL Certification Mark for jurisdictions employing the UL Certification.

Non-Metallic Pipes
Through Penetrations

System No. F-C-2002
November 20, 2009
F Rating – 2 Hr
T Rating – 2 Hr
L Rating At Ambient – 7 CFM/sq ft
L Rating At 400 F – Less Than 1 CFM/sq ft

1. **Floor-Ceiling Assembly** – The fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design No. L505, L511 or L536 in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening in flooring is 4-3/4 in. (121 mm).
   B. **Wood Joists** – Nom 2 by 10 in. (51 by 254 mm) lumber joists spaced 16 in. OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.
   C. **Furring Channels** – (Not shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) and spaced max 24 in (610 mm) OC.
   D. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. First layer of gypsum board nailed to wood joists. Second layer of gypsum board screw-attached to furring channels. The secondary firestop system (Items 3, 4 and 5) must be installed in the joist cavity prior to installation of the gypsum board ceiling.

2. **Nonmetallic Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core polyvinyl chloride (PVC) pipe for use in closed (process or supply) or vented (drain, waste, vent) piping systems or nom 4 in. (102 mm) diam (or smaller) SDR 13.5 chlorinated polyvinyl chloride (CPVC) pipe for use in closed (process or supply) piping systems. Diam of circular openings hole-sawed through flooring system and through two-layer gypsum board ceiling to be no greater than 1/8 in. (3.2 mm) larger than outside diam of pipe. Pipe to be installed approx midway between wood joists and centered in circular openings.

3. **Fill, Void, or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strips tightly wrapped around nonmetallic pipe (foil side exposed) with the edges butted against the underside of the subfloor (secondary firestop system) and against the finished gypsum wallboard ceiling (primary firestop system). Wrap strips for primary and secondary firestop systems to be installed identically. Fornom 1/2 in. to nom 2 in. (13 to 51 mm) diam pipes, a min of one layer of wrap strip is required. For nom 2-1/2 in. and nom 3 in. (64 mm and 76 mm) diam pipes, a min of two layers of wrap strip is required. For nom 3-1/2 in. and nom 4 in. (89 mm and 102 mm) diam pipes, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butt ed seam, with butted seams in successive layers staggered. Wrap strip layer(s) temporarily held in position using aluminum foil tape, steel wire tie, or equivalent.

4. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (.41 mm) thick (30 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (.41 mm) thick (30 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. With steel anchor tabs pressed tightly against the subfloor (secondary firestop system) or the finished gypsum wallboard ceiling (primary firestop system), compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. As an alternate to the band clamps, collars may be secured by a means No 10 by 1/2 in. (13 mm) long sheet metal screws installed in the vertical axis at the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. A min of three screws is required.

3M COMPANY – Type FS-195+

3M Fire Protection Products
www.3m.com/firestop

F-C-2002 • 1 of 2
Secure collar to subfloor (secondary firestop system) using min 3/4 in. (19 mm) long steel screws in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Secure collar to finished gypsum wallboard ceiling (primary firestop system) using 3/16 in. (5 mm) diam steel toggle bolts (1-7/8 in. (48 mm) grip) in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Min of three fasteners, symmetrically located, required for nom 1/2 in. to nom 3 in. (13 mm to 76 mm) diam pipes. Min of four fasteners, symmetrically located, required for nom 3-1/2 in. and nom 4 in. (89 and 102 mm) diam pipes. As a final step, bend wrap strip retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

5. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Generous bead of caulk to be applied around the perimeter of the steel collar (Item 4) at its interface with the subfloor (secondary firestop system) and gypsum wallboard ceiling (primary firestop system). A nom 1/4 in. (6 mm) diam bead of caulk shall be applied around the perimeter of the nonmetallic pipe at its interface with the wrap strip layers.

   **3M COMPANY** – CP 25 WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant.
   (Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

6. **Firestop Device** – (Not shown) – As an alternate to Items 3 and 4 for nom 1-1/2, 2, 3 or 4 in. (38, 51, 76, 102 mm) diam nonmetallic pipes, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of subfloor and against the finished gypsum wallboard ceiling in accordance with the accompanying installation instructions.

   **3M COMPANY** – PPD 150, PPD 200, PPD 300, PPD 400

**Note:** Systems with Nonmetallic Through Penetration(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – The fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Trusses** – Min 12 in. (305 mm) deep parallel chord trusses fabricated from 2 by 4 in. (51 mm by 102 mm) lumber in conjunction with galv steel truss plates or **Structural Wood Members** with bridging as required.
   B. **Flooring** – Nom 3/4 in. (19 mm) thick plywood flooring with or without **Floor Topping Mixture**. Diam of hole-sawed opening in flooring to be 1/2 in. to 3/4 in. (13 mm to 19 mm) larger than diam of pipe. Max diam of opening in flooring is 3 in. (76 mm).
   C. **Furring Channels** – Rigid or resilient galv steel furring channels installed perpendicular to bottom chord of trusses.
   D. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick, screw-attached to furring channels. Diam of hole-sawed opening in gypsum wallboard ceiling to be 1/2 in. to 3/4 in. (13 mm to 19 mm) larger than diam of pipe. Max diam of opening in ceiling is 3 in. (76 mm).

2. **Nonmetallic Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC), SDR13.5 chlorinated polyvinyl chloride (CPVC) or solid-core Schedule 40 acrylonitrile-butadiene-styrene (ABS) pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems. One pipe to be installed approx midway between trusses and centered in circular openings in flooring and in ceiling. A nom 1/4 in. to 3/8 in. (6 mm to 10 mm) annular space is required in the firestop system. Pipe to be rigidly supported on both sides of Floor-Ceiling assembly.

2A. **Electrical Nonmetallic Tubing** – Nom 1 in. (25 mm) diam (or smaller) corrugated wall ENT constructed of polyvinyl chloride. ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code. Max one ENT per through opening. ENT to be centered in opening and rigidly supported on both sides of Floor-Ceiling assembly.

   See **Electrical Nonmetallic Tubing** (FKHU) category in Electrical Construction Materials Directory for names of manufacturers.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied to 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly-wrapped around nonmetallic pipe (foil side exposed), secured with two steel tie wires and slid into hole-sawed opening in flooring (Item 1B) and in gypsum wallboard ceiling (Item 1D). Bottom edge of wrap strip to project 9/16 to 11/16 in. (14 mm to 17.5 mm) below bottom surface of flooring and below bottom (ceiling) surface of gypsum wallboard.

   **3M COMPANY** – **FS-195+**

   B. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Nom 1/4 in. (6 mm) thickness of caulk or putty to be applied to the exposed edge of the wrap strip layer (top of flooring and bottom of gypsum wallboard ceiling). Generous application of caulk or putty to be applied to fill all gaps at the wrap strip/flooring and wrap strip/gypsum wallboard ceiling interfaces.

   **3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant or MP+ Stix putty.

   (Note: L Ratings apply only when CP 25WB+ caulk or FB-3000 WT sealant is used. CP 25WB+ not suitable for use with CPVC pipes.)

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design Nos. L505, L511 or L536 in the UL Fire Resistance Directory. **The F Rating of the firestop system is equal to the rating of the floor-ceiling assembly.** The general construction features of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design.

   B. **Wood Joists** – For 1 hr fire-rated floor-ceiling assemblies nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses and **Structural Wood Members** with bridging as required and with ends firestopped. For 2 hr fire-rated floor-ceiling assemblies, nom 2 by 10 in. (51 by 254 mm) lumber joists spaced 16 in. (406 mm) OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.

   C. **Furring Channels** – (Not Shown) – Resilient galv steel furring installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 hr fire-rated assembly. Furring channels spaced max 24 in. (610 mm) OC.

   D. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard (2 hr fire-rated assembly) screw-attached to furring channels.

2. **Through Penetrants** – One nonmetallic pipe, conduit or tubing to be installed approx midway between wood joists. Diam of openings holesawed through flooring system and through two layers gypsum wallboard ceiling to be 0 to 1/4 in. (0 to 6 mm) larger than the outside diam of through-penetrant. Pipe or conduit to be rigidly supported on both sides of the floor-ceiling assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Cellular-Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid-core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   E. **Cellular-Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 1 and 2 in. (25 and 51 mm) wide strips. Strips tightly wrapped around nonmetallic pipe (foil side exposed) with the edges butted against the bottom surface of the gypsum wallboard ceiling. The min wrap strip width, the number of layers of wrap strip required, the type of pipe and the nom diam, as well as the F and T Rating of the system are shown in the following table:

(a) – Requires use of aluminum tape detailed in Item 3D

**3M COMPANY** – FS-195+
B. Steel Collar – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (.41 mm) thick (30 gauge) galv sheet steel are available from wrap strip manufacturer. As an alternate, collar may be field fabricated from min 0.016 in. (.41 mm) thick (30 gauge) galv sheet steel in accordance with instruction sheet applied by wrap strip manufacturer Steel collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. With steel anchor tabs pressed tightly against underside of gypsum wallboard ceiling, compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (.71 mm) thick stainless steel band clamp at the collar midheight. As an alternate to the band clamps, collars may be secured by a means No. 10 by 1/2 in. (13 mm) long sheet metal screws installed in the vertical axis of the center of the 1 in. (25 mm) overlap along the perimeter joint of the collar. A min of three screws is required.

Secure collar to gypsum wallboard ceiling using 3/16 in. (5 mm) diam steel toggle bolts (5/8 in. (16 mm) grip) in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Min of three fasteners, symmetrically located, required for nom 1/2 in. to nom 3 in. (13 mm to 76 mm) diam pipes. Min of four symmetrically located fasteners required for nom 3-1/2 in. and 4 in. (89mm and 102 mm) diam pipes. As a final step, bend wrap strip retainer tabs 90 degrees toward pipe to lock wrap strip layers in position.

C. Fill, Void or Cavity Materials* – Caulk or Sealant – Generous application of caulk to be applied around the perimeter of the steel collar at its interface with the gypsum wallboard ceiling and around the perimeter of the pipe at its interface with the wrap strip layers. Caulk also applied around perimeter of pipe to fill annular space to max extent possible, flush with top surface of floor.

3M COMPANY – CP25 WB+, IC 15WB+ caulk, FireDam 150+ caulk or FB-3000 WT sealant.
(Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

D. Foil Tape (not shown) – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the wrap strip (Item 3A). Min of one wrap, flush with the ceiling and proceeding downward. Tape is required only for nom 3-1/2 in. to 4 in. (89 mm to 102 mm) diam ABS pipes and for all ABS pipes.

E. Firestop Device* – (Not Shown) – As an alternate to Item A and B when nom 1-1/2 in. (32 mm), 2 in. (51 mm), 3 in. (76 mm), or 4 in. (102 mm) diam nonmetallic pipes are used, a firestop device consisting of a sheet-steel split collar lined with intumescent material and provided with steel clips for attachment may be used in accordance with the table below. Firestop device to be installed on underside of ceiling in accordance with the accompanying installation instructions.

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor-Ceiling Assembly** – The fire-rated solid or trussed lumber joist Floor-Ceiling assembly shall be constructed of the materials and in the manner specified in the individual L.500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or Structural Wood Members* with bridging as required and with ends firestopped.

   B. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Rectangular cutout in flooring to accommodate the bathtub drain piping (Item 2) to be max 8 by 12 in. (203 mm by 305 mm).

   C. **Furring Channels** – Rigid or resilient galv steel furring channels installed perpendicular to joists.

   D. **Gypsum Board*** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick. Wallboard screw-attached to furring channels as specified in the individual Floor-Ceiling Design. Two pieces of gypsum wallboard, each min 4 in. (102 mm) longer and wider than the cutout in the flooring, screw-attached to bottom of flooring concentric with cutout. Diam of opening hole-sawed through both layers of the gypsum wallboard patch to be 1/2 in. to 5/8 in. (13 mm to 16 mm) larger than outside diam of bathtub drain piping (Item 2).

2. **Drain Piping** – Nom 1-1/2 in. (38 mm) diam Schedule 40 PVC pipe and drain fittings cemented together and provided with PVC bathtub waste/overflow fitting.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials*** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly-wrapped around PVC drain piping (foil side exposed), secured with two steel wire ties, and slid into hole-sawed opening in gypsum wallboard patch (Item 1D). Bottom edge of wrap strip to project approx 1/2 in. (13 mm) below bottom surface of gypsum wallboard patch.

      **3M COMPANY** – FS-195+

   B. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Nom 1/4 in. (6 mm) diam bead of caulk to be applied to perimeter of wrap strip at its egress from the underside of the gypsum wallboard patch. Nom 1/4 in. (6 mm) thickness of caulk to be applied to the exposed edge of the wrap strip layer and to fill all gaps between the wrap strip layer and the tee of the drain fitting on the top surface of the gypsum wallboard patch.

      **3M COMPANY** – CP 25WB+, IC 15 WB+, FireDam 150+ caulk or FB-3000 WT sealant

**Note:** Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor Assembly** – The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** as specified in the UL Fire Resistance Directory and shall include the following construction features:
   B. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Diameter of opening shall be 5/8 in. (16 mm) larger than the outside diam of nonmetallic pipe or conduit (Item 2).
   C. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick, screw-attached to furring channels. Diameter of opening shall be 5/8 in. (16 mm) larger than the outside diam of nonmetallic pipe or conduit (Item 2).

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item 2) may be routed through a 1 hr fire-rated single, double or staggered wood stud/gypsum wallboard chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 2 in. by 6 in. (51 mm by 152 mm) or double nom 2 in. by 4 in. (51 mm by 102 mm) lumber studs.
   B. **Sole Plate** – Nom 2 in. by 6 in. (51 mm by 152 mm) or parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted.
   C. **Top Plate** – The double top plate shall consist of two nom 2 in. by 6 in. (51 mm by 152 mm) or two sets of parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Diameter of opening shall be 5/8 in. (16 mm) larger than outside diam of nonmetallic pipe or conduit.
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One nonmetallic pipe, tubing or conduit to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipes, tubing or conduit may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Rigid Nonmetallic Conduit** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR11.5 CPVC pipe for use in closed (process or supply) piping systems.
   D. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   E. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   F. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   G. **Crosslink Polyethylene (Pex) Tube** – Nom 1 in. (25 mm) diam (or smaller) SDR9 PEX tube for use in closed (process or supply) piping system.
   H. **Electrical Nonmetallic (ENT) Tubing** – Nom 1-1/4 in. (32 mm) diam (or smaller) corrugated wall electrical nonmetallic tubing constructed of polyvinyl chloride. ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code.

The hourly T Rating is 1 Hr when pipes/conduits A, B, C, G or H are used. The hourly T Rating is 0 Hr when pipes D, E or F are used.

3. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling or top plate. An additional min 1/4 in. (6 mm) crown of fill material applied to perimeter of penetrant at its egress from the top of flooring and underside of ceiling or from top of sole plate and underside of top plate.

**3M COMPANY** – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory, as summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of floor opening is 4-1/2 in. (114 mm).

   B. **Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.

   C. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Gypsum board nailed to wood joists. Max diam of ceiling opening is 4-1/2 in. (114 mm).

1.1 **Chase Wall** – (Optional, not shown) – The through penetrants (Item 2) may be routed through a 1 hr fire-rated single, double or staggered wood stud/gypsum wallboard chase wall constructed of the material and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted.

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in (51 by 102 mm) lumber plates, tightly butted. Max diam of opening is 4-1/2 in. (114 mm).

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed approx midway between wood joists. Diam of openings hole-sawed through flooring system and through gypsum board ceiling or top plates of optional chase wall to be 1/2 to 5/8 in. (13 mm to 16 mm) larger than the outside diam of through-penetrant. Pipe or conduit to be rigidly supported on both sides of the floor-ceiling assembly. The following types and sizes of nonmetallic pipes or conduits may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Rigid Nonmetallic Conduit**+ – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   C. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   D. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Foil Tape** – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the wrap strip (Item 3B). Min of one wrap, flush with the ceiling and extending downward.

   B. **Fill, Void or Cavity Materials**+ – Nom 1/4 in. (6 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. One wrap strip tightly wrapped around perimeter of penetrant (foil side exposed) and held in position using two steel wire ties. Wrap strip recessed into opening such that 1/2 to 3/4 in. (13 to 19 mm) extends below the bottom surface of the gypsum board ceiling or top plate when optional chase wall is used.

   C. **Fill, Void or Cavity Materials**+ – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annular space between wrap strip and periphery of opening flush with bottom surface of ceiling or top plate. Min 1/2 in. (13 mm) crown of caulk applied around the perimeter of the wrap strip at its interface with the gypsum board ceiling or top plate. Min 1/4 in. (6 mm) crown of caulk applied around the perimeter of penetrant at its interface with the wrap strip. Min 3/4 in. (19 mm) thickness of caulk applied to completely fill annular space, flush with top surface of floor.

**System No. F-C-2064**

November 20, 2009

F Rating – 1 Hr

T Rating – 1 Hr
1. **Floor-Ceiling Assembly** — The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Design in the UL Fire Resistance Directory. The 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design Nos. L505, L511 or L536 in the UL Fire Resistance Directory. The F and T Ratings of the firestop system are equal to the rating of the floor-ceiling assembly. The general construction features of the floor-ceiling assembly are summarized below:

   A. **Flooring System** — Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Diameter of opening shall be max 1 in. (25 mm) larger than the nom diam of pipe (Items 2 and 3). As an option, the opening for the branch piping (Item 3) may be rectangular, 8 in. by 12 in. (203 by 305 mm) max for 1 hr rated assemblies only.

   B. **Wood Joists** — For 1 hr fire-rated floor-ceiling assemblies, nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or Structural Wood Members* with bridging as required and with ends firestopped. For 2 hr fire-rated floor-ceiling assemblies, nom 2 by 10 in. (51 by 254 mm) lumber joists spaced 16 in. (406 mm) OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.

   C. **Gypsum Board*** — Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick, as specified in the individual Floor-Ceiling Design. First layer of gypsum board nailed to wood joists. Second layer of gypsum board (2 hr fire-rated assembly) screw-attached to furring channels. Diam of opening shall be max 1 in. (25 mm) larger than the nom diam of pipe (Item 2). Gypsum board plate for rectangular floor opening in 1 hr rated assemblies to be one or two piece, sized to overlap opening a min of 2 in. (51 mm) on all sides and shall be screw attached to underside of flooring with drywall or wood screws a max of 4 in. (102 mm) OC. Diam of opening to be 1 in. (25 mm) larger than nom diam of branch piping.

1.1 **Chase Wall** — (Optional, not shown) — The through penetrant (Item 2) may be routed through a 1 or 2 hr fire-rate single, double or staggered wood stud/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** — Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be max 1 in. (25 mm) larger than the nom diam of pipe (Item 2).

   C. **Top Plate** — The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be max 1 in. (25 mm) larger than the nom diam of pipe (Item 2).

   D. **Gypsum Board*** — Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrant** — One nonmetallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min of 0 in. (point contact) to max 1/2 in. (0 to max 13 mm). Pipe may be installed with continuous point contact. The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
3. **Branch Piping** — (Optional) One nonmetallic pipe with or without nom 3 in. (76 mm) diam (or smaller) toilet flange (not shown) to be connected to through penetrator (Item 2) and installed within opening in subfloor or gypsum board plate. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (0 to max 13 mm) Pipe may be installed with continuous point contact. Branch piping may terminate in a max 3 in. diam toilet flange, which corresponds to the type of branch piping. The following types and sizes of nonmetallic pipes may be used:

(a) — Requires use of aluminum tape detailed in Item 4A.

4. **Firestop System** — The details of the firestop system shall be as follows:

A. **Foil Tape** — Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the wrap strip (Item 4B). Min of one wrap, flush with the ceiling or top plate and proceeding downward. Not required when wrap strip Item 4B2 is used. Required only on pipes noted in table shown in Item 4B1.

B1. **Fill, Void or Cavity Materials** — **Wrap Strip** — Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 1 in. and 2 in. (25 and 51 mm) wide strips. Strips tightly wrapped around nonmetallic pipe (foil side exposed) with the edges butted against the bottom surface of the gypsum wallboard ceiling. The min wrap strip width and the number of layers of wrap strip required are dependent upon the type of pipe and the diam as shown in the following table:

(a) — Requires use of aluminum tape detailed in Item 4A.

3M COMPANY — FS-195+

B2. **Fill, Void or Cavity Materials** — **Wrap Strip** — (Alternate material to Item 4B1) Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and batted tightly against the bottom surface of the gypsum board ceiling or top plate. The min number of layers required is dependent upon the nom diam of the pipe and the hourly F Rating of the system. For 1 hr rated assemblies, the number of wrap strip layers are as follows. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. (64 and 76 mm) diam pipes, two layers are required. For nom 3-1/2 in. and 4 in. (89 and 102 mm) diam pipes, three layers are required. For 2 hr rated assemblies, the number of wrap strip layers are as follows. For nom 2 in. (51 mm) diam (and smaller) pipes, two layers are required. For nom 2-1/2 in. and 3 in. (64 and 76 mm) diam pipes, three layers are required. For nom 3-1/2 in. and 4 in. (89 and 102 mm) diam pipes, four layers are required.

3M COMPANY — Ultra GS

C. **Steel Collar** — Nom 1 or 2 in. (25 or 51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut min 0.016 in. (41 mm) thick (28 gauge) galv sheet are available from wrap strip manufacturer. As an alternate, collar may be field fabricated from min 0.016 in. (41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. A min 1/2 in. (13 mm) wide by min 0.028 in. (.71 mm) thick stainless steel band clamp secured around collar at midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (10 mm) long self-tapping steel screws. Collar secured to gypsum board ceiling using 3/16 in. (5 mm) diam steel toggle bolts (5/8 in. (16 mm) grip) in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Collar secured to top plate when chase wall is used using min 1 in. (25 mm) long No. 12 (or larger) steel wood screws in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Min of two fasteners, symmetrically located, required for nom 1/2 in. to nom 2 in. (13 mm to 51 mm) diam pipes. Min of three fasteners, symmetrically located, required for nom 2-1/2 in. to nom 3 in. (64 mm to 76 mm) diam pipes. Min of four symmetrically located fasteners required for nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes. Wrap strip retainers tabs to be bent 90 degrees toward pipe to lock wrap strip layers in position.

D. **Fill, Void or Cavity Materials** — **Caulk or Sealant** — Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant and branch piping (Items 2 and 3), flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/floor interface and the pipe/gypsum board or plate interface and at the seams in the gypsum board plate.
System No. F-C-2115 continued

3M COMPANY — CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant. CP 25WB+ not suitable for use with CPVC pipes.

E. Firestop Device* — As an alternate to Items 4B1, 4B2 and 4C, firestop device to be installed in accordance with the accompanying installation instructions. Firestop device to be installed and a latched around pipe and secured to underside of ceiling with Ultra Fast Anchors or with 3/16 in. (5 mm) diam steel toggle bolts (5/8 in. (16 mm) grip) in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Collar secured to top plate when chase wall is used with Ultra Fast Anchor Straps or 1/4 in. by 2 in. (6 by 51 mm) long steel screws in conjunction with 3/4 in. (19 mm) diam steel washers. Min of two fasteners, symmetrically located, required for nom 2 in. (51 mm) diam pipes. Min of three symmetrically located fasteners required for nom 3 in. (76 mm) diam pipes. Min of four symmetrically located fasteners required for nom 4 in. (102 mm) diam pipes.

3M COMPANY — Ultra RC Pack 2.0, 3.0, 4.0

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor-Ceiling Assembly** – The 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the Design No. L505, L511 or L536 in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Max diam of opening in flooring is 1-3/4 in. 
   B. **Wood Joists** – Nom 2 by 10 in. lumber joists spaced 16 in. OC with nom 1 by 3 in. lumber bridging and with ends firestopped. 
   C. **Furring Channels** – (Not Shown) – Resilient galv steel furring installed perpendicular to wood joists between first and second layers of wallboard (Item 1D). Furring channels spaced max 24 in. OC. 
   D. **Gypsum Board*** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard screw-attached to furring channels. Max diam of ceiling opening is 1-3/4 in. 

2. **Through Penetrant** – One nonmetallic pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems, centered within the firestop system. Pipe to be rigidly supported on both sides of the floor or wall assembly. The following type and size of nonmetallic pipe may be used:
   A. **Polyethylene/Aluminum/Polyethylene Composite Pressure Pipe (PE-AL-PE)** – Nom 1 in. diam (or smaller) PE-AL-PE pipe. The annular space shall be 1/4 in. 
   B. **Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene Composite Pressure Pipe (PEX-AL-PEX)** – Nom 1 in. diam (or smaller) PEX-AL-PEX pipe. The annular space shall be 1/8 in. 

3. **Firestop System** – The details of the firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material* – Caulk or Sealant** – At top of assembly, min 1/2 in. thickness of fill material applied within the annulus. Additional fill material to be installed such that a min 1/4 in. crown is formed around the through-penetrant on the top surface of the floor. At bottom of assembly, min 1-1/4 in. thickness of fill material applied within the annulus, flush with bottom surface of ceiling. 

   **3M COMPANY** – CP 25WB+ or FB-3000 WT

F Ratings – 1 And 2 Hr (See Item 1)
T Ratings – 1 And 2 Hr (See Item 1)

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design Nos. L505, L511 or L536 in the UL Fire Resistance Directory. The F and T Ratings of the firestop system are equal to the rating of the floor-ceiling assembly. The general construction features of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber of plywood subfloor with finish floor of lumber plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than nom diam of nonmetallic pipe or conduit (Item 2) and branch piping (Item 3).

   B. **Wood Joists*** – For 1 hr fire-rated floor-ceiling assemblies nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped. For 2 hr fire-rated floor-ceiling assemblies, nom 2 (51 mm) by 10 in. (254 mm) lumber joists spaced 16 in. (406 mm) OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.

   C. **Furring Channels** – (Not Shown) – Resilient galv steel furring installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 hr fire-rated assembly. Furring channels spaced max 24 in. (610 mm) OC.

   D. **Gypsum Board*** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. First layer of gypsum board nailed to wood joists. Second layer of gypsum board (2 hr fire-rated assembly) screw-attached to furring channels. Diam of opening shall be 1 in. (25 mm) larger than nom diam of nonmetallic pipe or conduit (Item 2).

1.1 **Chase Wall** – (Optional, not shown) – The through penetrant (Item No. 2) may be routed through a 1 or 2 hr fire-rated single, double or staggered wood stud/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted.

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be 1 in. (25 mm) larger than the nom diam of nonmetallic pipe or conduit (Item 2).

   D. **Gypsum Board*** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrant** – One nonmetallic pipe to be centered within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Branch Piping** – (Optional) One nonmetallic pipe connected to through penetrant (Item 2) and centered within opening in subfloor. The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
**System No. F-C-2129 continued**

B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

4. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Firestop Device – Collar** – Collar to be installed in accordance with the accompanying installation instructions. Collar to be installed and latched around pipe and secured to underside of ceiling with 3M Ultra Fast Anchor Straps or with 1/4 in. diam by min 1-1/2 in. (6 mm by 38 mm) long steel toggle bolts in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Min of two, three or four anchor straps or anchor bolts, symmetrically located, for nom 2 in. diam (and smaller), nom 3 in. diam and nom 4 in. (51 mm, 76 mm, 102 mm) diam pipes, respectively.

   **3M COMPANY** – Ultra PPD 1.5, 2.0, 3.0 and 4.0

   B. **Fill, Void or Cavity Materials – Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant and branch piping (Items 2 and 3), flush with top surface of floor.

   **3M COMPANY** – CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant

1. **Floor Assembly** — The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:

   A. **Flooring System** — Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1/2 in. to 1 in. (13 to 25 mm) larger than the outside diam of nonmetallic pipe (Items 3 and 4).

   B. **Joists** — Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and ends firestopped.

   C. **Gypsum Board** — Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick, attached as described in the individual Floor-Ceiling Design.

2. **Chase Wall** — The through penetrant (Item No. 3) shall be routed through a 1 hr fire-rated single, double or staggered wood studs/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber studs.

   B. **Sole Plate** — Nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in sole plate to be 1/2 in. to 1 in. (13 to 25 mm) larger than outside diam of pipe.

   C. **Top Plate** — The double top plate shall consist of two nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in top plate to be 1/2 in. to 1 in. (13 to 25 mm) larger than outside diam of pipe.

   D. **Gypsum Board** — Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

3. **Through Penetrant** — One nonmetallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (0 to max 13 mm). The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   E. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

4. **Branch Piping** — (Optional) - One nonmetallic pipe to be connected to through penetrant (Item 3) and installed within opening in subfloor. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13 mm). The following types and sizes of nonmetallic pipes may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
System No. F-C-2134 continued

D. Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

5. Fill, Void or Cavity Materials* — Caulk or Sealant — Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant (Item 3), flush with top surface of floor or sole plate and flush with bottom surface of top plate. Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of branch piping (Item 4), flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/floor interface and the pipe/plate interface.

3M COMPANY — CP 25WB+ caulk, IC 15WB+ caulk or FB-3000 WT sealant. CP 25WB+ not suitable for use with CPVC pipes.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor-Ceiling Assembly** – The fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 3/4 in. (19 mm) larger than the nom diam of penetrant (Item 2).
   B. **Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.
   C. **Gypsum Board*** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Wallboard nailed to wood joists. Diam of opening shall be 3/4 in. (19 mm) larger than the nom diam of penetrant (Item 2).

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum wallboard chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 2 by 6 in. (51 mm by 152 mm) or double nom 2 by 4 in. (51 mm by 102 mm) lumber studs.
   B. **Sole Plate** – Nom 2 by 6 in. (51 mm by 152 mm) or parallel 2 by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Diam of opening shall be 3/4 in. (19 mm) larger than the nom diam of penetrant (Item 2).
   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 mm by 152 mm) or two sets of parallel 2 by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Diam of opening shall be 3/4 in. (19 mm) larger than the nom diam of penetrant (Item 2).
   D. **Gypsum Board*** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrants** – One nonmetallic pipe or conduit to be installed either concentrically or eccentrically within the firestop system. Pipe or conduit to be rigidly supported on both sides of floor assembly. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 1/8 in. to max 1/4 in. (3.2 mm to max 6 mm) The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   C. **Rigid Nonmetallic Conduit*** – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFP A No. 70).
   D. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Materials*** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. One wrap strip tightly wrapped around perimeter of penetrant and held in position using 2 in. (51 mm) wide, 3 mil thick aluminum tape wrapped completely around wrap strip. Wrap strip recessed into opening such that 1/2 to 3/4 in. (13 mm to 19 mm) extends below the bottom surface of the gypsum wallboard ceiling or top plate when optional chase wall is used.

3M COMPANY – Ultra GS
System No. F-C-2141 continued

B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annular space between wrap strip and periphery of opening flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) crown of caulk applied around the perimeter of the wrap strip at its interface with the gypsum wallboard ceiling or top plate. Min 3/4 in. (19 mm) thickness of caulk applied to completely fill annular space, flush with top surface of floor.

**3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 2 in. (51 mm).
   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.
   C. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max diam of opening is 2 in. (51 mm).

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 2 in. by 6 in. (51 mm by 152 mm) or double nom 2 in. by 4 in. (51 mm by 102 mm) lumber studs.
   B. **Sole Plate** – Nom 2 in. by 6 in. (51 mm by 152 mm) or parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 2 in. (51 mm).
   C. **Top Plate** – The double top plate shall consist of two nom 2 in. by 6 in. (51 mm by 152 mm) or two sets of parallel 2 by 4 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 2 in. (51 mm).
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Crosslinked Polyethylene (PEX) Tubing** – One nom 1 in. (25 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping systems. Tubing installed concentrically or eccentrically within opening. Annular space between tubing and periphery of opening to be min 0 in. (point contact) to max 3/4 in. (0 mm to max 19 mm). Tubing to be rigidly supported on both sides of floor-ceiling.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at tubing/floor or sole plate interface on top surface of floor or sole plate and at tubing/ceiling or top plate interface.

**3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

1. Floor-Ceiling Assembly – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. Flooring System – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Diam of opening shall min 5/8 in. (16 mm) to max 1-1/8 in. (29 mm) larger than nom pipe diam.

   B. Wood Joists – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or Structural Wood Members* with bridging as required and with ends firestopped.

   C. Gypsum Board* – Nom 4 ft (122 mm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Diam of opening shall min 5/8 in. (16 mm) to max 1-1/8 in. (29 mm) larger than nom pipe diam.

1.1 Chase Wall – (Optional, not shown) - The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. Studs – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. Sole Plate – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall min 5/8 in. (16 mm) to max 1-1/8 in. (29 mm) larger than nom pipe diam.

   C. Top Plate – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall min 5/8 in. (16 mm) to max 1-1/8 in. (29 mm) larger than nom pipe diam.

   D. Gypsum Board* – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. Through Penetrants – One nonmetallic pipe or conduit installed eccentrically or concentrically within opening. Annular space between penetrant and periphery of opening to be min 0 in. (point contact) to max 1-1/8 in. (0 to max 29 mm) Penetrant to be rigidly supported on both sides of wall. The following types and sizes of penetrants may be used:

   A. Polyvinyl Chloride (PVC) Pipe – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. Chlorinated Polyvinyl Chloride (CPVC) Pipe – Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

   C. Rigid Nonmetallic Conduit+ – Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

   D. Acrylonitrile Butadiene Styrene (ABS) Pipe – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

3. Fill, Void or Cavity Materials* - Caulk or Sealant – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface.

   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant
   (Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than nom pipe diam. Max diam of opening is 1-1/2 in. (38 mm).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.

   C. **Gypsum Board** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than nom pipe diam. Max diam of opening is 1-1/2 in. (38 mm).

1.1. **Chase Wall** – (Optional, not shown) - The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be 1 in. (25 mm) larger than nom pipe diam. Max diam of opening is 1-1/2 in. (38 mm).

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm), or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be 1 in. (25 mm) larger than nom pipe diam Max diam of opening is 1-1/2 in. (38 mm).

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Crosslinked Polyethylene (PEX) Tubing** – Nom 1/2 in. (13 mm) diam (or smaller) SDR 9 PEX tubing for use in vented (drain, waste or vent) or closed (process or supply) piping systems. Tubing installed concentrically or eccentrically within opening. Annular space between tubing and periphery of opening to be min 0 in. (point contact) to max 7/8 in. (22 mm). Tubing to be rigidly supported on both sides of floor-ceiling assembly.

3. **Fill, Void or Cavity Materials** – **Caulk** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface on bottom surface of ceiling or top plate.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:
   
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or *Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe bundle. Max diam of opening is 2-1/2 in. (64 mm).
   
   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or *Structural Wood Members* with bridging as required and with ends firestopped.
   
   C. **Gypsum Board** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe bundle. Max diam of opening is 2-1/2 in. (64 mm).

1.1. **Chase Wall** – (Optional, not shown) - The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.
   
   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe bundle. Max diam of opening is 2-1/2 in. (64 mm).
   
   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm). or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe bundle. Max diam of opening is 2-1/2 in. (64 mm).
   
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Crosslinked Polyethylene (PEX) Tubing** – Max two nom 1/2 in. (13 mm) diam (or smaller) SDR 9 PEX tubing and max two 3/4 in. (19 mm) for use in vented (drain, waste or vent) or closed (process or supply) piping systems. Tubing installed concentrically or eccentrically within opening. Annular space between tubing and periphery of opening to be min 0 in. (point contact) to max 7/8 in. (22 mm). Tubing to be rigidly supported on both sides of floor-ceiling assembly.

3. **Fill, Void or Cavity Materials** – *Caulk* – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at penetrant/floor or sole plate interface on top surface of floor or sole plate and at penetrant/ceiling or top plate interface on bottom surface of ceiling or top plate.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1 in. (25 mm) larger than diam of pipe. Max diam of opening is 5-1/2 in. (140 mm).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.

   C. **Gypsum Board*** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design.

2. **Nonmetallic Pipe** – One nonmetallic drain pipe with max 4 in. (102 mm) diam toilet flange installed within the firestop system. The annular space between drain pipe and periphery of opening shall be min 0 in. (point contact) to max 1 in. (25 mm). Pipe to be rigidly supported on lower side of floor assembly. Pipe to be rigidly supported on lower side of floor assembly. The following types and sizes of nonmetallic pipes, fittings and flanges may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core or cellular core PVC pipe for use in vented (drain, waste or vent) piping system.

   B. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core or solid core ABS pipe for use in vented (drain, waste or vent) piping systems.

3. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within annular space around perimeter of pipe (Item 2), flush with top surface of floor.

   **3M COMPANY** – IC 15WB+, CP 25WB+, FB-3000WT

4. **Water Closet** – Floor mounted vitreous china water closet.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Rectangular cutout in flooring to accommodate the bathtub drain piping (Item 2) to be max 8 by 12 in. (203 by 305 mm). Cutout to be patched using one layer of min 3/4 in. (19 mm) thick plywood or min 5/8 in. (16 mm) thick gypsum board (Item 1C). One piece of plywood or gypsum board, min 2 in. (51 mm) longer and wider than the cutout in the flooring, cut in half in short dimension at opening hole-sawed for bathtub drain piping (Item 2). Two halves positioned below flooring, concentric with cutout, with cut edges tightly butted with no visible openings, and screw attached by means of 1-1/2 in. (38 mm) long laminate screw spaced max 4-1/2 in. (114 mm) OC. Diam of opening hole-sawed through patch to be 3/8 in. (10 mm) larger than outside diam of bathtub drain piping. Max diameter opening is 2-1/2 in. (63.5 mm)

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or Structural Wood Members* with bridging as required and with ends firestopped.

   C. **Gypsum Board*** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design.

2. **Drain Piping** – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe and drain fittings cemented together and provided with PVC bathtub waste/overflow fittings. The annular space shall be min 0 in. (point contact) to max 1 in. (25 mm).

3. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of sealant applied within annular space around perimeter of Drain Piping, flush with top surface of plywood or gypsum wallboard patch.

   3M COMPANY – IC 15WB+ Sealant, CP 25WB+ Caulk, FB-3000 WT Sealant

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Designs in the UL Fire Resistance Directory, as summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 6 in. (152 mm).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.

   C. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Floor-Ceiling Design.

2. **Plastic Plumbing Fixtures** – **Shower Base Receptor** – One-piece molded nonmetallic shower base receptor with stainless steel drain plate. Shower base receptor to be installed in accordance with the manufacturer’s instructions.

   **TILE-REDI USA L L C** – Model 3360L, 3360R, 37NEO, 3737, 4837, 4837ADA, 4837MB or 4848

3. **Tile** – (Not Shown) - Ceramic or stone tile applied to shower pan floor with epoxy adhesive in accordance with shower base receptor installation instructions.

4. **Nonmetallic Pipe** – Nom 2 in. (51 mm) diam Schedule 40 solid or cellular core PVC pipe solvent-welded into drain in the bottom of the shower base receptor and centered in the floor opening.

5. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Single layer of wrap strip tightly wrapped around nonmetallic drain pipe (Item 4) with a butted seam and with the top edge of the wrap strip abutting the hub of the shower drain. Wrap strip layer temporarily held in position using tape.

   **3M COMPANY**

   **3M FIRE PROTECTION PRODUCTS** – Ultra GS

   B. **Steel Collar** – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and tabs to retain wrap strip layer. Coils of precut 0.016 in. (0.41 mm) thick (28 gauge) galv sheet steel available from wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip with min 1 in. (25 mm) overlap at seam. Anchor tabs to be pressed tightly against hub of shower drain and collar to be compressed around wrap strip using a min 1/2 in. (13 mm) wide stainless steel clamp at the collar midheight. Collar to be secured to underside of flooring system with steel screws with min 1-1/4 in. (32 mm) diam steel washers in conjunction with steel extension straps. Hanger tab extension straps to be fabricated from min 0.022 in. (0.6 mm) thick galv sheet steel. Taper straps from 1/4 in. (6 mm) wide to 1 in. (25 mm) wide with sufficient length to allow 1-1/2 to 2 in. (38 to 51 mm) lap onto floor. Straps secured to collar by inserting min 1 in. (25 mm) length of 1/4 in. (6 mm) wide end into hole on mounting tab and bending 180 degrees. Min of two anchor screws, diametrically opposed, are required.

---

1. **Floor Assembly** — The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** — Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1/2 in. to 1 in. (13 to 25 mm) larger than the outside diam of nonmetallic pipe (Items 3 and 4).
   B. **Joists** — Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and ends firestopped.
   C. **Gypsum Board** — Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick, attached as described in the individual Floor-Ceiling Design.

2. **Chase Wall** — The through penetrant (Item No. 3) shall be routed through a 1 hr fire-rated single, double or staggered wood studs/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** — Nom 2 by 6 in. (51 by 152 mm) lumber studs.
   B. **Sole Plate** — Nom 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in sole plate to be 1/2 in. (13 mm) larger than outside diam of pipe.
   C. **Top Plate** — The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in top plate to be 1/2 in. (13 mm) larger than outside diam of pipe.
   D. **Gypsum Board** — Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

3. **Through Penetrant** — One nonmetallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (0 to 13 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** — Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   E. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** — Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

4. **Branch Piping** — (Optional) - One nonmetallic pipe to be connected to through penetrant (Item 3) and installed within opening in subfloor. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
System No. F-C-2369 continued

B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** — Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

5. **Firestop System** — The details of the firestop system shall be as follows:

A. **Fill, Void or Cavity Materials* — Caulk or Sealant** — Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant (Item 3), flush with top surface of floor or sole plate and flush with bottom surface of top plate. Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of branch piping (Item 4), flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/floor interface and the pipe/plate interface. 3M COMPANY 3M FIRE PROTECTION PRODUCTS — CP 25WB+ caulk, IC 15WB+ caulk or FB-3000 WT sealant. CP 25WB+ not suitable for use with CPVC pipes.

B. **Fill, Void or Cavity Materials* — Wrap Strip** — Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe and butted tightly against the bottom surface of the top plate. Two continuous layers and two partial layers of wrap strip are required. The two partial layers of wrap strip shall each be installed on opposing sides of the pipe, in line with the direction of the top plate. The ends of the partial layers shall be on a line tangent to the periphery of the continuous layers and parallel with the edge of the top plate. Layers of wrap strip temporarily held in place with tape. 3M COMPANY 3M FIRE PROTECTION PRODUCTS — Ultra GS

C. **Steel Collar** — Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. With steel anchor tabs pressed tightly against the top plate, compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. Secure collar to top plate with four anchor tabs, two on each side of pipe, using min 1-1/4 in. (32 mm) long steel screws in conjunction with 1 1/4 in. (32 mm) diam steel fender washers. As a final step, bend wrap strip retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Floor Assembly** – The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1/2 in. to 1 in. (13 to 25 mm) larger than the outside diam of nonmetallic pipe (Items 3 and 4).
   B. **Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and ends firestopped.
   C. **Gypsum Board*** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick, attached as described in the individual Floor-Ceiling Design.

2. **Chase Wall** – The through penetrant (Item No. 3) shall be routed through a single, double or staggered wood studs/gypsum board chase wall and shall include the following construction features:
   A. **Studs** – Nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber studs.
   B. **Sole Plate** – Nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in sole plate to be 1/2 in. to 1 in. (13 to 25 mm) larger than outside diam of pipe.
   C. **Top Plate** – The single or double top plate shall consist of one or two nom 2 by 4 in. (51 by 102 mm) or 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in top plate to be 1/2 in. to 1 in. (13 to 25 mm) larger than outside diam of pipe.
   D. **Gypsum Board** – Min ½ in. thick rated or nonrated gypsum board.

3. **Through Penetrant** – One nonmetallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (0 to max 13 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   E. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

4. **Branch Piping** – (Optional) – One nonmetallic pipe to be connected to through penetrant (Item 3) and installed within opening in subfloor. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
System No. F-C-2387 continued

B. Cellular Core Polyvinyl Chloride (ccPVC) Pipe – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

C. Acrylonitrile Butadiene Styrene (ABS) Pipe – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

D. Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

5. Fill, Void or Cavity Materials* – Caulk or Sealant – Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant (Item 3), flush with top surface of floor or sole plate and flush with bottom surface of lower top plate. Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of branch piping (Item 4), flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/floor interface.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – CP 25WB+ caulk, IC 15WB+ caulk or FB-3000 WT sealant
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

1. **Floor Assembly** – The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Diam of opening shall be 1/2 in. to 1 in. (13 to 25 mm) larger than the outside diam of nonmetallic pipe (Items 3 and 4).
   B. **Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or Structural Wood Members* with bridging as required and ends firestopped.
   C. **Gypsum Board*** – Nom 4 ft (1.2 m) wide by 5/8 in. (16 mm) thick, attached as described in the individual Floor-Ceiling Design.

2. **Chase Wall** – The through penetrant (Item No. 3) shall be routed through a single, double or staggered wood studs/gypsum board chase wall and shall include the following construction features:
   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) lumber studs.
   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in sole plate to be 1/2 in. (13 mm) larger than outside diam of pipe.
   C. **Top Plate** – The single or double top plate shall consist of one or two nom 2 by 6 in. (51 by 152 mm) lumber plates. Diam of opening or length of notch-out in top plate to be 1/2 in. (13 mm) larger than outside diam of pipe.
   D. **Gypsum Board** – Min ½ in. (13 mm) thick rated or nonrated gypsum board.

3. **Through Penetrant** – One nonmetallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (0 to 13 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   E. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

4. **Branch Piping** – (Optional) – One nonmetallic pipe to be connected to through penetrant (Item 3) and installed within opening in subfloor. The annular space between pipe and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13 mm). The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
System No. F-C-2388 continued

B. Cellular Core Polyvinyl Chloride (ccPVC) Pipe – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

C. Acrylonitrile Butadiene Styrene (ABS) Pipe – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

D. Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

5. Firestop System – The firestop system shall consist of the following:

A. Fill, Void or Cavity Materials* – Caulk or Sealant – Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant (Item 3), flush with top surface of floor or sole plate and flush with bottom surface of lower top plate. Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of branch piping (Item 4), flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/floor interface.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – CP 25WB+ caulk, IC 15WB+ caulk or FB-3000 WT sealant
(Note: CP 25WB+ not suitable for use with CPVC pipes.)

B. Fill, Void or Cavity Materials* – Wrap Strip – Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe and butted tightly against the bottom surface of the top plate. Two continuous layers and two partial layers of wrap strip are required. The two partial layers of wrap strip shall each be installed on opposing sides of the pipe, in line with the direction of the top plate. The ends of the partial layers shall be on a line tangent to the periphery of the continuous layers and parallel with the edge of the top plate. Layers of wrap strip temporarily held in place with tape.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – Ultra GS

C. Steel Collar – Nom 2 in. (51 mm) deep collar with 1-1/4 in. (32 mm) wide by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut 0.016 in. (0.41 mm) thick galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. (0.41 mm) thick galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. With steel anchor tabs pressed tightly against the top plate, compress collar around wrap strip layers using a min 1/2 in. (13 mm) wide by 0.028 in. (.71 mm) thick stainless steel band clamp with worm drive tightening mechanism at the collar midheight. Secure collar to top plate with four anchor tabs, two on each side of pipe, using min 1-1/4 in. (32 mm) long steel screws in conjunction with 1 1/4 in. (32 mm) diam steel fender washers. As a final step, bend wrap strip retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture*** as specified in the individual Floor-Ceiling Design. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members*** with bridging as required and with ends firestopped.

   C. **Gypsum Board*** – Nom 4 ft (1219 mm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2).

1.1 **Chase Wall** – (Optional, not shown) - The tubing (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2)

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2).

   D. **Gypsum Board*** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Crosslink Polyethylene (PEX) Tubing** – Nom 2 in. (51 mm) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) piping system. Tubing installed concentrically or eccentrically within opening. Annular space between tubing and edge of opening to be min 0 in. to max 1-1/2 in. (38 mm). Tubing to be rigidly supported on both sides of floor-ceiling assembly.

3. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling. An additional min 1/2 in. (13 mm) bead of fill material applied at the tubing/floor interface at point contact location on top surface of floor and at the tubing/ceiling interface at point contact location on lower surface of floor.

1. **Floor-Ceiling Assembly** – The 1 hr fire rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Designs in the UL Fire Resistance Directory, as summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or *Floor Topping Mixture* as specified in the individual Floor-Ceiling Design. Max diam of opening is 6 in. (152 mm).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or *Structural Wood Members* with bridging as required and with ends firestopped.

   C. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Floor-Ceiling Design. Max diam of opening is 6 in. (152 mm).

1.1 **Chase Wall** – (Optional, not shown) – The tubing (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2).

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Diameter of opening shall be 1-1/2 in. (38 mm) larger than the outside diam of tubing (Items 2).

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrant** – One nonmetallic pipe or conduit to be centered within the opening. Annular space between the pipe or conduit and the periphery of the opening shall be nom 3/4 in. (19 mm). Penetrant to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipe or conduit may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Rigid Nonmetallic Conduit (RNC)** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA 70).

3. **Fill, Void or Cavity Material** – *Wrap Strip* – Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe and secured with the adhesive closure tab. Wrap strip is to be recessed within the opening in the gypsum board ceiling such that the bottom of the wrap strip layer is 7/8 in. (22 mm) below the bottom plane of the ceiling.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Fire Barrier Tuck-In Wrap Strip WS 200, WS 300 or WS 400

4. **Fill, Void or Cavity Material** – *Sealant* – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with the top surface of the floor. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with the bottom surface of the gypsum board ceiling.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – IC 15WB+, CP 25WB+ or FB-3000 WT Sealant

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring** – Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete as specified in the individual G500 Series Design. Diam of opening shall be max 1 in. (25 mm) larger than the nom diam of pipe (Items 2 and 3).
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of opening is 5-1/2 in. (140 mm).

2. **Through Penetrants** – One nonmetallic pipe to be installed within the firestop system. Pipe to be rigidly supported on both sides of floor-ceiling assembly. The annular space between pipe and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm). Pipe may be installed with continuous point contact. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.

3. **Branch Piping** – One nonmetallic pipe with or without nom 3 in. (76 mm) diam (or smaller) toilet flange (not shown) to be connected to through penetrant (Item 2) and installed within opening in floor. The annular space between pipe and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm). Pipe may be installed with continuous point contact. Branch piping may terminate in a max 3 in. (76 mm) diam toilet flange, which corresponds to the type of branch piping. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Cellular Core Polyvinyl Chloride (ccPVC) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   D. **Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe** – Nom 3 in. (76 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
System No. F-E-2001 continued

4. **Firestop System** – The details of the firestop system shall be as follows:

A. **Foil Tape** – Nom 4 in. (102 mm) wide, 3 mil thick aluminum tape wrapped around pipe prior to the installation of the wrap strip (Item 4B). Min of one wrap, flush with the ceiling and proceeding downward. Not required when wrap strip in Item 4.B2 is used. Required only on pipes noted in table shown in Item 4.B1.

B1. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 1 and 2 in. (25 and 51 mm) wide strips. Strips tightly wrapped around nonmetallic pipe (foil side exposed) with the edges butted against the bottom surface of the gypsum board ceiling. The min wrap strip width and the number of layers of wrap strip required are dependent upon the type of pipe and the nom diam as shown in the following table:

<table>

(a) - Requires use of aluminum tape detailed in Item 4A.

**3M COMPANY** – FS-195+

B2. **Fill, Void or Cavity Materials** – **Wrap Strip** – (Alternate material to Item 4.B1) Nom 1/8 in. (3.2 mm) thick intumescent material supplied in 2 in. (51 mm) wide strips. Wrap strip tightly wrapped around nonmetallic pipe with continuous layers and butted tightly against the bottom surface of the gypsum board ceiling. The min number of layers required is dependent upon the nom diam of the pipe and the hourly F Rating of the system. The number of wrap strip layers are as follows. For nom 2 in. (51 mm) diam (and smaller) pipes, one layer is required. For nom 2-1/2 in. and 3 in. (64 mm and 76 mm) diam pipes, two layers are required. For nom 3-1/2 in. and 4 in. (89 mm and 102 mm) diam pipes, three layers are required.

**3M COMPANY** – Ultra GS

C. **Steel Collar** – Nom 1 or 2 in. (25 or 51 mm) deep collar with 1-1/4 in. (32 mm) deep by 2 in. (51 mm) long anchor tabs and min 3/4 in. (19 mm) long tabs to retain wrap strip layers. Coils of precut min 0.016 in. (41 mm) thick (28 gauge) galv sheet steel are available from wrap strip manufacturer. As an alternate, collar may be field fabricated from min 0.016 in. (41 mm) thick (28 gauge) galv sheet steel in accordance with instruction sheet applied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 degrees, wrapped tightly around wrap strip layers with min 1 in. (25 mm) overlap at the seam. A min 1/2 in. (13 mm) wide by min 0.028 in. (71 mm) thick stainless steel band clamp secured around collar at midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (152 by 10 mm) long self-tapping sheet screws. Collar secured to gypsum wallboard ceiling using 3/16 in. (5 mm) wide by 0.028 in. (71 mm) thick stainless steel band clamp applied to collar at midheight. As an alternate to the band clamp, collar for systems with three or more layers of wrap strip may be fastened together along the overlapping seam with three No. 6 by 3/8 in. (152 by 10 mm) long self-tapping sheet screws. Collar secured to gypsum wallboard ceiling using 3/16 in. (5 mm) diam steel toggle bolts (5/8 in. (16 mm) grip) in conjunction with 1-1/4 in. (32 mm) diam steel fender washers. Min of three symmetrically located fasteners required for nom 2-1/2 in. to nom 3 in. (64 mm to 76 mm) diam pipes. Min of four symmetrically located fasteners required for nom 3-1/2 in. and 4 in. (89 mm to 102 mm) diam pipes. Wrap strip retainer tabs to be bent 90 degrees toward pipe to lock wrap strip layers in position.

D. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annular space around perimeter of through penetrant and branch piping (Items 2 and 3). flush with top surface of floor. Min 1/2 in. (13 mm) diam bead applied at the pipe/roof interfaces at point contact locations on the top surface of floor.

**3M COMPANY** – CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant

(Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

Note: Systems with Nonmetallic Through Penetration(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
1. Floor-Ceiling Assembly – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. Flooring – Lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete as specified in the individual G500 Series Design. Diameter of opening shall be 5/8 in. (16 mm) larger than the outside diam of nonmetallic pipe or conduit (Items 2).
   B. Joists – Steel joists or Structural Steel Members* as specified in the individual G500 Series Design.
   C. Gypsum Board* – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Diameter of opening shall be 5/8 in. (16 mm) larger than the outside diam of nonmetallic pipe or conduit (Item 2).

2. Through Penetrants – One nonmetallic pipe or conduit to be installed concentrically or eccentrically within the firestop system. Annular space between pipe or conduit and edge of opening to be min 0 in. (0 mm, point contact) to max 5/8 in. (16 mm). Pipe or conduit to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. Polyvinyl Chloride (PVC) Pipe – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. Rigid Nonmetallic Conduit++ – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
   C. Chlorinated Polyvinyl Chloride (CPVC) Pipe – Nom 1-1/2 in. (38 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping system.
   D. Cellular Core Polyvinyl Chloride (ccPVC) Pipe – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   E. Acrylonitrile Butadiene Styrene (ABS) Pipe – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   F. Cellular Core Acrylonitrile Butadiene Styrene (ccABS) Pipe – Nom 1-1/2 in. (38 mm) diam (or smaller) Schedule 40 cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   G. Crosslink Polyethylene (PEX) Tube – Nom 1 (25 mm) in. diam (or smaller) SDR 9 PGX tube for use in closed (process or supply) piping system.
   H. Electrical Nonmetallic (ENT) Tubing++ – Nom 1-1/4 in. (32 mm) diam (or smaller) corrugated wall electrical nonmetallic tubing constructed of polyvinyl chloride. ENT to be installed as a complete system with all terminations in junction boxes, outlet boxes or other approved enclosures as specified in the National Electrical Code. Max one ENT centered in firestop system with an annular space of 1 in. (25 mm) ENT rigidly supported on both sides of the floor-ceiling assembly.

The hourly T Rating is 1 Hr when pipes/conduits A, B, C, G or H are used. The hourly T Rating is 0 Hr when pipes D, E or F are used.

3. Fill, Void or Cavity Materials* – Caulk, Sealant or Putty – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling. An additional min 1/4 in. (6 mm) bead of fill material applied at the pipe/floor interface at point contact location on top surface of floor and at the pipe/ceiling interface at point contact location on lower surface of floor.

3M COMPANY – CP 25WB+ caulk, MP+ Stix putty, IC 15WB+ caulk, FireDam 150+caulk or FB-3000 WT sealant.

(Note: CP 25WB+ and FireDam 150+ not suitable for use with CPVC pipes.)

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Concrete Floor** – Normal weight or lightweight (100-150 pcf or 1600-2400 kg/m³) concrete over metal lath or steel deck as specified in the individual G500 Series Design. Max diam of floor opening is 6 in. (152 mm).
   B. **Joists** – Steel joists or Structural Steel Members* as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to steel furring channels as specified in the individual G500 Series Design. Max diam of ceiling opening is 6 in. (152 mm).

2. **Through Penetrant** – One nonmetallic pipe or conduit to be centered within the opening. Annular space between the pipe or conduit and the periphery of the opening shall be nom 3/4 in. (19 mm). Penetrant to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipe or conduit may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Rigid Nonmetallic Conduit (RNC)†** – Nom 4 in. (102 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA 70).

3. **Fill, Void or Cavity Material** – **Wrap Strip** – Min 3/16 in. (5 mm) thick intumescent material supplied in 2-1/2 in. (64 mm) wide strips. Single layer of pre-cut wrap strip tightly wrapped around nonmetallic pipe and secured with the adhesive closure tab. Wrap strip is to be recessed within the opening in the gypsum board ceiling such that the bottom of the wrap strip layer is 7/8 in. (22 mm) below the bottom plane of the ceiling.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – Fire Barrier Tuck-In Wrap Strip WS 200, WS 300 or WS 400

4. **Fill, Void or Cavity Material** – **Sealant** – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with the top surface of the floor. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with the bottom surface of the gypsum board ceiling.

Note: Systems with Nonmetallic Through Penetrant(s) have not been evaluated with a pressure differential of 50 Pa between the exposed and unexposed surfaces as required by the National Building Code of Canada.
System No. F-E-2044
June 11, 2012
F Rating – 1 Hr
FT Rating – 0 Hr
FH Rating – 1 Hr
FTH Rating – 0 Hr
Leakage Rating at Ambient – Less Than 1 CFM/ft²
Leakage Rating at 204° C – 5 CFM/ft²

1. **Floor-Ceiling Assembly** – The 1 Hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Joists** – Steel joists or Structural Steel Members* as specified in the individual G500 Series Design.
   B. **Flooring** – Normal weight or lightweight concrete as specified in the individual G500 Series Design. Diam of opening to be 25 mm (1 in.) larger than nom size of penetrant.
   C. **Gypsum Board*** – Min 5/8 in. (10 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Diam of opening to be 25 mm (1 in.) larger than nom size of penetrant.

1.1 **Chase Wall** – (Optional, Not Shown) – The through penetrant (Item 2) may be routed through a 1 hr fire rated single, double or staggered wood stud/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 51 by 102 mm (2 by 4 in.) (or larger) or double nom 51 by 102 mm (2 by 4 in.) lumber studs.
   B. **Sole Plate** – Nom 51 by 102 mm (2 by 4 in.) (or larger) or parallel nom 51 by 102 mm (2 by 4 in.) lumber plates, tightly butted. Diam of opening to be 25 mm (1 in.) larger than nom size of penetrant.
   C. **Top Plate** – The double top plate shall consist of two nom 51 by 102 mm (2 by 4 in.) (or larger) or two sets of parallel nom 51 by 102 mm (2 by 4 in.) (or larger) lumber plates, tightly butted. Diam of opening to be 25 mm larger than nom size of penetrant.
   D. **Gypsum Board*** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Through Penetrant** – One nonmetallic pipe, conduit or tubing to be centered within the firestop system. Annular space between pipe and edge of opening to be min 6 mm (1/4 in.) to max 10 mm (3/8 in.). Pipe to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipes may be used:
   A. **Polyvinyl Chloride (PVC) Pipe** – Nom 51 mm (2 in.) diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** – Nom 51 mm (2 in.) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.
   C. **Acrylonitrile Butadiene Styrene (ABS) Pipe** – Nom 51 mm (2 in.) diam (or smaller) Schedule 40 solid or cellular core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping system.
   D. **Rigid Nonmetallic Conduit+** – Nom 51 mm (2 in.) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA No. 70).
   E. **Electrical Nonmetallic Tubing (ENT)+** – Nom 51 mm (2 in.) diam (or smaller) corrugated-wall electrical nonmetallic tubing (ENT) constructed of polyvinyl chloride (PVC) and installed in accordance with the National Electrical Code (NFPA No. 70).
   F. **Flexible Nonmetallic Conduit, Liquid-Tight (FNMC)+** – Nom 51 mm (2 in.) diam (or smaller) corrugated-wall flexible nonmetallic conduit, liquid-tight (FNMC) constructed of polyvinyl chloride (PVC) and installed in accordance with the National Electrical Code (NFPA No. 70).
   G. **Crosslinked Polyethylene (PEX) Tubing** – Nom 51 mm (2 in.) diam (or smaller) SDR 7.3 or SDR 9 PEX tubing for use in closed (process or supply) piping systems or nom 51 mm (2 in.) diam (or smaller) SDR 9 PEX tubing for use in closed (process or supply) or vented (drain, waste or vent) piping system.
3. **Fill, Void or Cavity Materials** – **Sealant** – Min 19 mm (3/4 in.) thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 16 mm (5/8 in.) thickness of fill material applied within the annulus, flush with bottom surface of ceiling or lower top plate.

Sleeve flush with each side of wall or may extend a maximum 18 in. beyond each side of wall. Mineral wool required inside sleeve. 1 & 2 hour F rating. Also known as WJ3177. |
| W-J-3185      | 1, 2       | 3M™ Fire Barrier Sealant CP 25WB+  
3M™ Fire Barrier Packing Material PM4 | Max 5 in. diameter 161 KV 20000MM power cables. Max 3 per opening. Min 8 in. concrete wall. Max diam of opening 14 in. 14 in. PVC sleeve cast in place extending 1 in. past wall face. Metal enclosure attached to one side of wall. 3M Packing Material PM4 rolled into cylinders. 2 hour F and T rating. Sealant on one side of wall only. Also known as WJ3185. |
1. **Floor or Wall Assembly** – Lightweight or normal weight (100-150pcf) (1601 - 2400 kg/m³) concrete. Min thickness of concrete floor or wall is 2-1/2 in. (64 mm) for 1 hr F Rating and 4-1/2 in. (114 mm) for 2 and 3 hr F Ratings. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 36 sq ft (232 cm²) with one dimension of opening being 36 in. (914 mm) or less. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cables** – Nom 4 in. (102 mm) diam (or smaller) tight bundle of cable. Cable bundle rigidly supported on both sides of floor or wall assembly. The following types and sizes of cables may be used:
   A. Max 150 pair No. 24 AWG telephone cable; polyvinyl chloride (PVC) insulation and jacket materials. When telephone cable is used, F Rating is 1 or 2 hr, depending on floor or wall thickness.
   B. Max No. 2/0 AWG multiconductor power/control cable; cross-linked polyethylene (XLPE) insulation, PVC jacket. When power/control cable is used, F Rating is 1 or 3 hr, depending on floor or wall thickness.
   C. Max 350 kcmil single-conductor power cable; XLPE insulation. When power cable is used, F Rating is 1 or 3 hr, depending on floor or wall thickness.

3. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in strips. Min 2 in. (51 mm) wide strip wrapped around cable bundle (foil side exposed) and secured in place with steel wire or aluminum foil tape. Wrap strip to extend approx 7/8 in. (22 mm) beyond each face of the intumescent sheet (Item 4). Prior to installation of the wrap strip on cable bundle, caul (Item 5) to be forced into cable bundle to fill all interstices between cables throughout 2 in. (51 mm) height of wrap strip layer.
   3M COMPANY – FS-195+

4. **Fill, Void or Cavity Materials** – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheet cut to tightly follow the contours of the cable wrap strip and with a min lap of 2 in. (51 mm) on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface). Sheet secured to top surface of floor and both sides of wall using min 3/16 in. diam x 1-1/4 in. (5 mm by 32 mm) long steel masonry fasteners with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. OC.
   3M COMPANY – CS-195+

5. **Fill, Void or Cavity Materials** – Graphite Seal, Caulk or Putty – One layer of 1/2 in. x 1/16 in. (13 mm by 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caul or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of opening. Generous application of caul or putty to be applied around the base of the intumescent sheet (Item 4). Prior to installation of the wrap strip on cable bundle, caul (Item 5) to be forced into cable bundle to fill all interstices between cables throughout 2 in. (51 mm) height of wrap strip layer.
   3M COMPANY – E-FIS or Ultra GS seals, CP 25WB+ caulk, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty (Note: L Ratings apply only when CP-25 WB+ or FB-3000 WT is used.)

6. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.015 in. (4 mm) thick (30 gauge) galv steel centerd over entire length of slit made in intumescent sheet (Item 4) to permit installation about the cable bundle. Prior to installation of the steel strip, slit in intumescent sheet covered with nom 1/4 in. (6 mm) diam bead of caul (Item 5). Steel cover strip secured to galv steel backer of intumescent sheet with steel sheet-metal screws or steel rivets spaced max 2 in. (51 mm) OC on each side of slit.

7. **Support Channel** – (Not Shown) – When area of through opening exceeds 1440 sq in. (9290 cm²), an intermediate support channel shall be installed flush with top surface of floor or both surfaces of wall. Support channels to be min 1-5/8 by 1-5/8 in. (41 mm by 41 mm) and formed of min 0.093 in. (2.4 mm) thick (No. 12 gauge) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. When support channels are centered beneath butted seams of intumescent sheets, no steel cover strip (Item 6) is required over butted seam. Intumescent sheet secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. (76 mm) OC. on each side of butted seam. When support channel is located away from intumescent sheet seam, fasteners spaced max 6 in. (152 mm) OC. Prior to installation of the intumescent sheet(s), a nom 1/4 in. (6 mm) diam continuous bead of caul (Item 5) shall be applied as gasket over the steel support channel.

F Rating – 2 Hr
FT Rating – 0 Hr
FH Rating – 2 Hr
FTH Rating – 0 Hr

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6-1/4 in. (159 mm).

   See Concrete Blocks* (CAZT) category in the Fire Resistance Directory for names of manufacturers.

1A. **Steel Sleeve** – (Optional, Not Shown) – Nom 4 in. (102 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe sleeve cast into floor or wall assembly. Sleeve to be flush with floor or wall surfaces.

2. **Cables** – Min 12 percent to max 40 percent fill area per max 4 in. (102 mm) diam steel sleeved through opening. Min 20 percent to max 40 percent fill area per max 6-1/4 in. (159 mm) diam non-sleeved through opening. Cables to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of cables may be used:

   A. Max 7/C No. 12 AWG multiple copper conductor power and control cables with polyvinyl chloride (PVC) insulation and jacket materials.

   B. Multiple fiber optical communication cables jacketed with PVC and having a max outside diam of 3/4 in.

   C. Max 200 pair No. 24 AWG copper conductor telephone cables with PVC insulation and jacket materials.

   D. Max 350 kcmil power cables with PVC insulation and jacket material.

3. **Packing Material** – Nom 1 in. (25 mm) thickness of ceramic (aluminum silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. (25 mm) from top surface of floor or sleeve or from both surfaces of wall.

3A. **Forming Material** – As an alternate to the packing material in Item 3, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. As an option, the strips of min 1/2 in. (13mm) thick compressible mat may be folded in half, lengthwise, and stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 2 in. (51 mm) depth. Top of forming material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material.

   **3M COMPANY**

   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Packing Material

4. **Fill, Void, or Cavity Materials** – **Putty** – Moldable putty material kneaded by hand and applied to fill annular space (and interstices between cables to max extent possible) to a min depth of 1 in. (25 mm), flush with top surface of floor or sleeve In wall assemblies, required putty depth to be installed symmetrically on both sides of wall.

   **3M COMPANY**

   **3M FIRE PROTECTION PRODUCTS** – Type MPS-2+

*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 1 in. (25 mm). See **Concrete Block** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable** – One max 25 pair No. 24 AWG telephone cable with polyvinyl chloride (PVC) insulation and jacket.

3. **Packing Material** – Min 3 in. (76 mm) thickness of min 4.0pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.

4. **Fill, Void or Cavity Material** – **Sealant** – Min 1/2 in. (13 mm) thickness of fill material to be applied within the annulus, flush with the top surface of floor or with both surfaces of wall.

**3M COMPANY** – Type FB-1000 NS, FB-1003SL (floors only), FB-2000 or FB-2000+.

*Bearing the UL Classification Mark*
1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 8 in. (203 mm).

   See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Sleeve** – (Optional) – Nom 8 in. (203 mm) diam (or smaller) Schedule 40 (or heavier) steel pipe or nom 6 in. (152 mm) diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe cast into floor or wall assembly. Sleeve to be flush with or project max 2 in. (51 mm) from top surface of floor or both surfaces of wall. When PVC sleeve is used, max cable conductor size is No. 12 AWG. As an alternate, nom 8 in. (203 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

3. **Cables** – Aggregate cross-sectional area of cables to be min 10 percent to max 40 percent of the cross-sectional area of the opening. Cables to be rigidly supported on both sides of the floor or wall assembly. Any combination of the following types and sizes of cables may be used:

   A. Max 1000 kcmil single-conductor copper or aluminum power cable; cross-linked polyethylene insulation.
   B. Max No. 2/0 AWG multiconductor copper or aluminum power cables; cross-linked polyethylene, polyvinyl chloride, neoprene rubber, hypalon or silicone rubber insulation and jacket materials.
   C. Max No. 12 AWG multiconductor copper control cables; cross-linked polyethylene, polyvinyl chloride, neoprene rubber, hypalon or silicone rubber insulation and jacket materials.
   D. Max 400 pair No. 24 AWG copper telephone cables; polyvinyl chloride insulation and jacket materials.
   E. Multiple fiber optical communication cable jacketed with PVC and having a max outside diam of 5/8 in.
   F. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   G. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   H. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   I. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   J. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   K. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   L. Max 3/C No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   M. Through Penetrating Product* – Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category. See Through Penetrating Product (XHLY) category in the Fire Resistance Directory for names of manufacturers.

4. **Packing Material** – Min 1 in. (25 mm) thickness of 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or sleeve or from both surfaces of wall or ends of sleeve as required to accommodate the required thickness of fill material (Item 5).
5. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Applied to fill the through opening to a min thickness of 1 in. (25 mm) flush with the top surface of the floor or sleeve or both surfaces of wall or ends of sleeve. Caulk to be forced into interstices of cable group to max extent possible. F Rating of firestop systems is dependent upon the through opening size, the thickness of the concrete, the sleeve type and percent cable fill, as tabulated below:

**System No. C-AJ-3031**

January 9, 1996  
(Formerly System No. 337)

F Rating – 2 Hr  
T Ratings – 0, 3/4 and 2 Hr (See Item 2)

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of circular through opening in floor or wall assembly to be 3/4 in. to 1-1/2 in. larger than diam of through penetrating product (Item 2) installed in through opening. Max diam of opening is 3 in.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Product*** – Max four copper conductor No. 2 AWG (or smaller) aluminum or steel Armored Cable+ or Metal – Clad Cable+. Max one armored cable or metal clad cable installed near center of circular through opening in floor or wall assembly. Through penetrating product to be rigidly supported on both sides of floor or wall assembly. **When max No. 2 AWG armored cable or metal clad cable is used in floor assembly, T Rating is 0 hr. When max No. 2 AWG armored cable or metal clad cable is used in wall assembly less than 6 in. thick, T Rating is 0 hr. When max No. 2 AWG armored cable or metal clad cable is used in min 6 in. thick wall assembly, T Rating is 3/4 hr. When max No. 12 AWG armored cable or metal clad cable is used in min 6 in. thick wall assembly, T Rating is 2 hr.**

   AFC CABLE SYSTEMS INC

3. **Packing Material** – Nom 1 in. thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. from top surface of floor or from both surfaces of wall.

4. **Fill, Void or Cavity Material*** – Caulk – Applied to fill the annular space around the through penetrating product. In floors, a min 1 in. depth of fill material to be installed flush with top surface of floor. In walls, a min 1 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly.

F Rating – 3 Hr
FT Rating – 0 and 1/2 Hr (See Item 2)
FH Rating – 3 Hr
FTH Rating – 0 and 1/2 Hr (See Item 2)

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 5 in. (127 mm).

   See **Concrete Block** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Products** – Max four aluminum conductor 1000 kcmil (or smaller) **Metal Clad Cable** (jacketed or unjacketed). Max one metal clad cable to be installed near center of circular opening in floor or wall assembly. The annular space between the cable and periphery of the opening shall be min 3/4 to max 1-1/4 in. (19 to 32 mm). Through penetrating product to be rigidly supported on both surfaces of floor or wall assembly.

   **GENERAL CABLE INDUSTRIES INC** – Stabiloy MC Cable

   The T, FT and FTH Rating for the firestop system is 1/2 hr except that for cable sizes greater than 750 kcmil, the T, FT and FTH Rating is 0 hr.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4.0 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. In floors, forming material is recessed min 1/2 in. (13 mm) below top surface of floor. In walls, forming material is centered in the wall’s mid-depth and recessed a min of 1/2 in. (13 mm) from both surfaces of the wall.
   B. **Fill, Void or Cavity Material** – **Sealant** – Min 1/2 in. (13 mm) thick layer of fill material applied within the annulus, flush with top surface of floor and with both surfaces of wall.

   **3M COMPANY** – Type FB-1000 NS, FB-1003SL (floors only), FB-2000 or FB-2000+.

*Bearing the UL Classification Mark

Reprinted from the Online Certifications Directory with permission from UL
© 2013 UL LLC
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening not to exceed 240 sq in. (1548 cm²) with max dimension of 30 in. (762 mm).

   See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Telephone Riser Cable** – Multi conductor telephone riser cable with max No. 22 AWG copper conductors insulated with PVC skinned expanded polyethylene. Conductors encased in an overlapped corrugated aluminum shield with a PVC jacket. Outside diam of riser cable not to exceed 3.25 in. (82.6). Aggregate cross-sectional area of copper conductors within riser cable not to exceed 1.14 sq in. (735 mm²).

   When aggregate cross-sectional area of copper conductors within riser cable is equal to or less than 0.905 sq in. (23 mm²), T Rating is 1/2 hr. When aggregate cross-sectional area of copper conductors with in riser cable is greater than 0.905 sq in. (23 mm²), T Rating is 0 hr. When more than one riser cable is installed in through opening, the min separation between cables is 2 in. (51 mm). Cables to be rigidly supported on both sides of floor or wall assembly.

3. **Fill, Void or Cavity Materials** – Intumescent Sheet – Rigid aluminum foil-faced sheet with a galv steel sheet backer. Diam of circular cutout in sheet to accommodate each riser cable to be 1 in. (25 mm) larger than diam of cable such that the cutout closely follows the contours of the wrap strip layers (Item 5) on the cable. Sheet cut to lap a min of 2 in. (51 mm) on the concrete on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface). Sheet secured to top surface of floor (or both surfaces of wall) using min 3/16 in. (5 mm) diam by 1-1/2 in. (38 mm) long steel expansion bolts, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) OC with additional fasteners located on each side of butted seam or slit made to permit installation of the sheet around individual riser cables. When a single riser cable is installed in a circular through opening with a diam 1 to 1-1/2 in. (25 mm to 38 mm) larger than the diam of the riser cable, the intumescent sheet is not required.

   **3M COMPANY** – CS-195+

4. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (0.51 mm) thick (No. 26 gauge) galv steel centered over entire length of seam or slit made in intumescent sheet (Item 3) to permit installation about the riser cable(s). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws spaced max 2 in. (51 mm) OC on each side of seam or slit.

5. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nominal 2 in. (51 mm) wide by 24 in. (610 mm) long strips. Two layers of nom 2 in. (51 mm) wide strips tightly wrapped around individual riser cables with the foil face exposed. Each layer of wrap strip to be installed with butted seams in layers staggered. Wrap strip layers to be secured in place with two steel wire ties. When intumescent sheet (Item 3) is used, the wrap strip layers are to extend approx 7/8 in. (22 mm) beyond each face of the intumescent sheet(s). When no intumescent sheet is used (see conditions under Item 3), the wrap strip layers shall be slid into annular space such that the top edges are recessed min 1/4 in. (6 mm) from the top surface of floor. In wall assemblies, the wrap strip layers shall be installed in the same manner used for floor assemblies but shall be installed symmetrically on both sides of the wall.

   **3M COMPANY** – FS-195+

6. **Fill, Void or Cavity Materials** – Graphite Seal, Caulk, Sealant or Putty – One layer of 1/2 in. x 1/16 in. (13 mm by 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulking or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Nom 1/4 diam (6 mm) bead of caulking or putty applied to perimeter of wrap strip around riser cable at interface with intumescent sheet. Additional caulking or putty applied to cover exposed edges of wrap strip around perimeter of riser cable. When riser cable is centered in circular through opening and intumescent sheet is used, a min 2 in. (51 mm) depth of caulking or putty is required in annular space between wrap strip layers and concrete and a min 1/4 in. (6 mm) depth of caulking or putty is required over edges of wrap strip layers flush with surface of floor or wall.

   **3M COMPANY** – E-FIS or Ultra GS seals, CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty.

*Bearing the UL Classification Marking

Reprinted from the Online Certifications Directory with permission from Underwriters Laboratories Inc.

Copyright © 2010 Underwriters Laboratories Inc.
1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Floor may also be constructed of any min 6 in. thick UL Classified hollow core **Precast Concrete Units**. Wall may also be constructed of any UL Classified **Concrete Block**.

   See [Concrete Blocks (CAZT)](https://www.3m.com/firestop) and [Precast Concrete Units (CFTV)](https://www.3m.com/firestop) categories in the Fire Resistance Directory for names of manufacturers.

2. **Nonmetallic Sleeve** – Nom 4 in. diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe or **Rigid Nonmetallic Conduit** + formed of PVC. Length of sleeve to be equal to thickness of floor or wall plus 12 in. such that, when installed, the ends of the sleeve will project min 6 in. beyond each surface of the floor or wall assembly. Sleeve to be cast in place during concrete placement or grouted into oversized through opening using hydraulic cement or sand-cement grout throughout the thickness of the floor or wall assembly. Diam of oversized through opening to be 1/2 in. to 1-1/2 in. larger than outside diam of sleeve. Breeched cores in precast concrete units and concrete blocks shall be plugged with pieces of mineral wool batt insulation prior to installation of the sleeve and grout to ensure that the grout completely fills the annular space around the sleeve throughout the thickness of the floor or wall.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be min 0 percent to max 33 percent of the cross-sectional area of the sleeve. Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cable may be used:
   - Max 150 pair No. 24 AWG copper conductor telephone cables with PVC insulation and jacket materials.
   - Multiple fiber optical communication cables jacketed with PVC or PE and having a max outside diam of 3/4 in.

4. **Fill, Void or Cavity Materials** – **Putty** – Moldable putty material kneaded by hand and packed tightly into end of sleeve (and interstices between cables to max extent possible) on each side of floor or wall assembly. Min putty depth at each end of sleeve is 1 in.

   **3M COMPANY** – **MP+** Six, Cable Wrap putty

5. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. wide strips. Nom 2 in. wide strips tightly-wrapped around nonmetallic sleeve (foil side exposed) with the top edges butted against the underside of the concrete floor. For nom 2 in. diam (or smaller) sleeves, a min of one layer of wrap strip is required. For nom 2-1/2 and 3 in. diam sleeves, a min of two layers of wrap strip is required. For nom 3-1/2 and 4 in. diam sleeves, a min of three layers of wrap strip is required. Each layer of wrap strip to be installed with butted seam. Butted seams in successive layers staggered. Wrap strip layers temporarily held in position using aluminum foil tape, steel wire tie, or equivalent. In wall assemblies, the wrap strip is to be installed in the same manner used for floor assemblies, but it shall be installed symmetrically on both sides of the wall assembly.

   **3M COMPANY** – **FS-195, FS-195+**

6. **Steel Collar** – Nom 2 in. deep collar with 1-1/4 in. wide by 2 in. long anchor tabs and min 1/2 in. long tabs to retain wrap strip layers. Coils of precut 0.016 in. thick (30 gauge) galv sheet steel available from wrap strip manufacturer. As an alternate, collar may be field-fabricated from min 0.016 in. thick (30 gauge) galv sheet steel in accordance with instruction sheet supplied by wrap strip manufacturer. Steel collar, with anchor tabs bent outward 90 deg, wrapped tightly around wrap strip layers with min 1 in. overlap at seam. With steel collar anchor tabs pressed tightly against floor or wall surface(s), compress collar around wrap strip layers using a min 1/2 in. wide by 0.028 in. thick stainless steel band clamp with wrought drive tightening mechanism at the collar midheight. Secure collar to floor or wall surface(s) with 1/4 in. diam by min 1-1/2 in. long steel expansion bolts, or equivalent, in conjunction with steel nuts and min 1-1/4 in. diam steel fender washers. Three anchor bolts, symmetrically located, required for nom 1-1/2 in. to nom 3 in. diam pipes. Four anchor bolts, symmetrically located, required for nom 3-1/2 and 4 in. diam pipes. As a final step, bend retainer tabs 90 deg toward pipe to lock wrap strip layers in position.

7. **Firestop Device** (Not Shown) – An alternate to Item 5 and 6 for nom 1-1/2, 2, 3 or 4 in. diam nonmetallic sleeves, a firestop device consisting of a sheet-steel split collar lines with intumescent material and provided with steel clips for attachment may be used. Firestop device to be installed on underside of floor or on both sides of wall in accordance with the accompanying installation instructions.

   **3M COMPANY** – **PPD 150, PPD 200, PPD 300, PPD 400**

*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. When individual cable (Item 2) is installed in through opening, diam of opening to be 3/4 in. to 1-1/2 in. (19 mm to 38 mm) larger than diam of cable. When more than one cable is installed in opening, diam of opening to be sufficient to allow separation between cables for installation of caulk fill material (Item 4). Max diam of opening is 6 in. (152 mm).

See Concrete Block (CAZT) category in the Fire Resistance Directory for names of manufacturers.

1A. **Sleeve** – (Optional) – Nom 6 in. (152 mm) diam (or smaller) Schedule 40 PVC pipe or Schedule 10 (or heavier) steel pipe cast into concrete floor or wall. Sleeve to be flush with or project max 1-1/2 in. (38 mm) from top surface of floor or both surfaces of wall.

2. **Through Penetrating Products** – Aggregate cross-sectional area of cables to be 15 to 30 percent of the cross-sectional area of the opening. Min annular space between cable and edge of through opening is zero in. (point contact). Through penetrating products to be rigidly supported on both sides of floor or wall assembly. The following types of through-penetrating products may be used:

   A. Max four copper conductors No. 4/0 AWG (or smaller) aluminum or steel Armored Cable# or Metal-Clad Cable+.

   AFC CABLE SYSTEMS INC

   B. Two or more twisted copper conductor No. 6 AWG (or smaller) Power Limited Circuit Cable+ with or without a jacket under a metal armor.

   AFC CABLE SYSTEMS INC

   C. Two or more twisted copper conductor No. 10 AWG (or smaller) Power Limited Fire Alarm Cable+ with or without a jacket under a metal armor.

   AFC CABLE SYSTEMS INC

   D. Two or more twisted copper conductor No. 12 AWG (or smaller) Non Power Limited Fire Alarm Cable+ with or without a jacket under a metal armor.

   AFC CABLE SYSTEMS INC

3. **Packing Material** – Polyethylene backer rod or nom 1 in. (25 mm) thickness of mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material (Item 4).

4. **Fill, Void or Cavity Material** – **Caulk** – Applied to fill the annular space around the through penetrating product. When an individual cable is installed in a max 3 in. (76 mm) diam through opening, a min 1/2 in. (13 mm) depth of caulk fill material is required. When more than one cable is installed in through opening or through opening is larger than 3 in. (76 mm) diam, a min 1 in. (25 mm) depth of caulk fill material is required. Caulk fill material to be installed flush with top surface of floor. In walls, caulk fill material to be installed flush with wall surface on both sides of wall assembly.

F Rating – 2 Hr
T Ratings – 0, 3/4 and 2 Hr (See Item 2)

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Diam of circular through opening in floor or wall assembly to be 3/4 in. to 1-1/2 in. larger than diam of through penetrating product (Item 2) installed in through opening. Max diam of opening is 3 in.

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Product*** – Max four copper conductor No. 2 AWG (or smaller) aluminum Metal–Clad Cable+. Max one metal clad cable installed near center of circular through opening in floor or wall assembly. Through penetrating product to be rigidly supported on both sides of floor or wall assembly. **When max No. 2 AWG metal clad cable is used in floor assembly, T Rating is 0 hr. When max No. 2 AWG metal clad cable is used in wall assembly less than 6 in. thick, T Rating is 0 hr. When max No. 2 AWG metal clad cable is used in min 6 in. thick wall assembly, T Rating is 3/4 hr. When max No. 12 AWG metal clad cable is used in min 6 in. thick wall assembly, T Rating is 2 hr.**

NEXANS CANADA INC

3. **Packing Material** – Nom 1 in. thickness of ceramic (alumina silica) fiber blanket or mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1 in. from top surface of floor or from both surfaces of wall.

4. **Fill, Void or Cavity Material** – Caulk – Applied to fill the annular space around the through penetrating product. In floors, a min 1 in. depth of fill material to be installed flush with top surface of floor. In walls, a min 1 in. depth of fill material to be installed flush with wall surface on both sides of wall assembly.

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Floor may also be constructed of any min 6 in. thick UL classified hollow-core **Precast Concrete Units**. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 4 in.

   See **Concrete Blocks (CAZT)** and **Precast Concrete Units (CFTV)** categories in the Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** (Optional) – Nom 4 in. diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in sleeve or opening to be min 11 percent to max 60.5 percent of the cross-sectional area inside the sleeve or opening. The annular space between cables and periphery of opening shall be min of 0 in. (point contact) to max 2-3/4 in. Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cable may be used:
   
   A. Max 1/C 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 200 pair No. 24 AWG copper conductor telecommunication cables; polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables; XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/0 AWG copper or aluminum conductor cables; PVC insulation and jacket.
   E. Max 3/C No. 2/0 (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TEK cable.
   F. Max 1-10/125 Fiber Optic (F.O.) cable; PVC insulation and jacket.
   G. Max 3/C with ground No. 12 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.

4. **Firestop System** – The details of the firestop system shall be as follows:
   
   A. **Packing Material** – Min 1 in. thickness of min 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material. When floor is constructed of hollow-core precast concrete units, packing material to be recessed from both surfaces of floor as required to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 1/2 in. thickness of fill material applied into interstices of cables on the top surface of floor or both surfaces of wall. When floor is constructed of hollow-core precast concrete units, fill material to be installed symmetrically on both sides of the floor, flush with floor surfaces.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

F Rating – 3 Hr
T Ratings – 0 and 1 Hr (See Item 3)
W Rating – Class I

1. **Floor or Wall Assembly** – Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6 in.
See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Sleeve** (Optional) The following sleeves may be used:
   A. **Metallic Sleeve** – Nom 6 in. diam (or smaller) steel Schedule 40 (or heavier) pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces.
   B. **Nonmetallic Sleeve** – Nom 6 in. diam (or smaller) Schedule 40 polyvinyl chloride (PVC) pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be max 45 percent of the cross-sectional area of the opening. Min separation between cables and between cables and periphery of opening is 1/8 in. Cables to be rigidly supported on both sides of floor or wall assembly.
The following types and sizes of copper conductor cables may be used:
   A. Max 1/C 500 kcmil cable with cross linked polyethylene (XLPE) jacket.
   B. Max 8/C No. 12 AWG or max 12/C No. 14 AWG cable with XLPE insulation and jacket.
   C. Max 100 pair No. 24 AWG cable with PVC insulation and jacket.
   
   **T Rating** is 1/2 Hr for cables A and B. **T Rating** is 0 Hr for cable C.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3-3/4 in. thickness of min 4.5 pcf mineral wool batt insulation firmly packed into opening as a permanent form so that the width of the wool is compressed at least 50 percent. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – **Sealant** – Min 1/4 in. thickness of sealant applied within the annulus, flush with the top surface of floor or with both surfaces of wall. Sealant to be forced into interstices of cable group to max extent possible.

*Bearing the UL Classification Marking

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 4 in. (102 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cables** – Aggregate cross-sectional area of cables in opening to be min 24 percent to max 60 percent of the cross-sectional area inside the opening. The annular space between cables and periphery of opening shall be min 0 in. (point contact) to max 2 in. (0 mm to 51 mm). Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cable may be used:

   A. Max 1/C 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 250 pair No. 24 AWG copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TEK cable.
   F. Max 1-10/125 Fiber Optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 12 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. Max 3/C No. 2/0 AWG copper conductor XHHW-2 w/grd aluminum interlocked armor cable with or without PVC jacket.

   **SERVICE WIRE CO**

   I. Max 3/C No. 2/0 AWG copper conductor XHHW-2 w/grd tray cable.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material.

   B. **Fill Void or Cavity Materials* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 1/2 (13 mm) diam bead of caulking applied to the cable/concrete interface at the point contact location on the top surface of floor or both surfaces of wall.

   **3M COMPANY** – FD-150+, CP 25WB+, IC 15WB+ caulking or FB-3000 WT sealant

   *Bearing the UL Classification Mark
1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. thick UL Classified hollow-core Precast Concrete Units*. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening 6 in. (152 mm).

See Concrete Blocks (CAZT) and Precast Concrete Units (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) - Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces. As an alternate, nom 6 in. (152 mm) diam (or smaller) sleeve fabricated from nom 0.019 in. (0.48 mm) thick galv steel cast or grouted into floor or wall assembly flush with floor or wall surfaces.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the sleeve or opening. Annular space between cables and periphery of opening or sleeve shall be min of 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cable may be used:
   
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   
   F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   
   K. Through Penetrating Product* - Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category. See Through Penetrating Product (XHLY) category in the Fire Resistance Directory for names of manufacturers.

4. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall or both ends of sleeve as required to accommodate the required thickness of fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.

      A1. **Forming Material** – As an alternate to the packing material in Item 4A, nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat to be stacked to a thickness greater than the width of the annular space and compression-fitted, edge-first, to fill the annular space to a min 4 in. (102 mm) depth. Top of forming material to be recessed from top surface of floor or top edge of sleeve or from both surfaces of wall as necessary to accommodate the required thickness of caulk fill material. In floors constructed of hollow-core concrete, packing material to be recessed from top and bottom surfaces of floor or sleeve as required to accommodate the required thickness of fill material.

   3M COMPANY – Fire Barrier Packing Material

   B. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top surface of floor or top edge of sleeve or with both surfaces of wall or both ends of sleeves. In floors constructed of hollow-core concrete, min 1/2 in. (13 mm) thickness of caulk applied within the annulus, flush with top and bottom surfaces of floor or sleeves. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the top surface of floor or both surfaces of wall or hollow-core concrete.

   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant.

Wall may also be constructed of any UL Classified **Concrete Blocks**. Max area of opening is 50 in² (323 cm²) with a max dimension of is 12-1/8 in. (308 mm) for square devices. Max diam of opening is 2-1/2 in. (64 mm) for 2 in. (51 mm) round devices. Max diam of opening is 4-1/2 in. (114 mm) for 4 in. (114 mm) round devices. **When thickness of floor or wall assembly is less than 4-1/2 in. (114 mm), F Rating is 2 hr.**

   See **Concrete Blocks (CAZT)** category in Fire Resistance Directory for names of manufacturers.

2. **Cables** – Within the loading area of each firestop device module the cables may represent a 0 to 100 percent visual fill. Cable bundle to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cables may be used:
   
   A. Max 2/C No. 18 AWG copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   B. Max 4 pair No. 24 AWG copper conductor Cat5e or Cat 6 telephone cable with PVC insulation and jacket materials.
   C. Max RG/U (or smaller) coaxial cable with foam high density polyethylene insulation and PVC jacket materials.
   D. Max 3/C (with ground) No. 14 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   E. Max 1/C No. 8 AWG copper conductor cable with PVC insulation and nylon jacket materials.
   F. Max 12 core No. 26 AWG shielded multi cox cable with foam high density polyethylene insulation and PVC jacket.
   G. Max 48MM62.5 micron fiber optic cables with having a min FT-6 rating.
   H. Max 62.5/125 micron fiber optic cables with having a min Riser rating.
   I. Max 1/C 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
   J. Max three copper conductors (with ground) No. 12 AWG **Metal Clad Cable**.
   K. Max four copper conductors No. 2 AWG **Metal Clad Cable**.

   **AFC CABLE SYSTEMS INC**
   L. Max 1/C 2/0 AWG non halogen copper conductor cable.
   M. Max 300 pair No. 24 AWG copper conductor telephone cable with PVC insulation and jacket materials.
   N. Max 30 pair No. 22 copper conductor shielded switchboard cable with PVC insulation and jacket materials.
   O. Max RG/6 (or smaller) coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket materials.
   P. Max RG/U (or smaller) coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket materials.
   Q. Max 7/C No. 12 AWG copper conductors with PVC insulation and jacket materials.
   R. Max 4 pair No. 23 AWG copper conductor Cat 6 telephone cable with PVC insulation and jacket materials.
   S. Max three copper conductors (with ground) No. 12 AWG steel **Armored Cable**.
   T. Max 04-02 2 5M fiber optic cables having a max diameter of 0.450 in. (11.4 mm).
   U. Max 1/C No. 750 kcmil copper conductors with PVC insulation and fabric jacket materials.
   V. Max 3/C with ground No. 4/0 AWG copper or aluminum conductor SER cable with cross linked polyethylene (XLPE) or PVC insulation and jacket.

   When min floor or wall thickness is 4-1/2 in. (114 mm) and when cable fill is comprised of Item 2B, T Rating is 1 Hr. Otherwise, T Rating is 0 Hr.
3. **Firestop System** – The firestop system shall consist of the following:

A. **Firestop Device** – A max of three square firestop devices may be ganged together. As an alternate, one round device may be centered within a round opening. Each device consists of a nom 4 by 4 by 10 in. (102 by 102 by 254 mm) or 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device to be centered within opening and installed with ends projecting an equal distance beyond each surface of the floor or wall assembly in accordance with the accompanying installation instructions. The annular space between the firestop device(s) and the periphery of the opening shall be nom 1/8 in. (3 mm). Firestop devices secured in place by means of fill material (Item 4B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of floor or wall after installation of fill material and secured to together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the cable bundle and installed flush with each end of device on both sides of floor or wall assembly. When installed in a wall assembly the foam plug in one or both ends of the device is optional except when L Rating is required (See Item 3B). When foam plugs are omitted in wall assembly, T Rating is 0 hr.

**3M COMPANY** – 3M Fire Barrier Pass-Through Device

B. **Fill, Void or Cavity Materials** – **Caulk or Putty** – Min 1 in. (25 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall prior to the installation of the mounting flanges. When the annular space is 1/8 in. (3.2 mm) or less, the fill material in the annulus is optional. Also, as an option, the foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device. When annulus around firestop device module(s) is filled with caulk or putty and when both ends of each firestop device module are filled with a nominal 1/8 in. (3.2 mm) depth of caulk or putty the following L Ratings apply:

<table>

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening 6 in. (152 mm). See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Steel Sleeve** – (Optional) – Nom 6 in. (152 mm) diam (or smaller) Schedule 10 (or heavier) steel sleeve cast or grouted into floor or wall assembly. Steel sleeve may be installed flush or may project max 2 in. (51 mm) beyond the floor or wall surfaces.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be max 44 percent of the cross-sectional area inside the sleeve or opening. Annular space between cables and periphery of opening or sleeve shall be min of 0 in. (0 mm, point contact) to max 2 in. (51 mm). Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cable may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product*** – Any aluminum or steel jacketed **Armored Cable**+ or **Metal Clad Cable**+ currently Classified under the **Through Penetrating Product** category. See **Through Penetrating Product** (XHLY) category in the Fire Resistance Directory for names of manufacturers.

4. **Fill, Void or Cavity Materials*** – **Caulk or Sealant** – Min 1-1/2 in. (38 mm) thickness of caulk applied within the annulus, flush with bottom or top surface of floor or with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to the penetrant/concrete or penetrant/sleeve interface at the point contact location on the bottom or top surface of floor or both surfaces of wall.

**3M COMPANY** – IC 15WB+ Caulk, CP 25WB+ Caulk or FB-3000 WT Sealant

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 5 in. (127 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrating Products** – Nom 3 in. (76 mm) diam (or smaller), jacketed or unjacketed aluminum or steel Metal Clad (Type MC) cable with max four 750 kcmil (or smaller) aluminum or copper Type THHN or XHHW conductors. Max one metal clad cable to be installed near center of circular opening in floor or wall assembly. For 3 Hr F Rating, the annular space between the cable and periphery of the opening shall be min 1/2 in. (13 mm) to max 1-1/2 in. (38 mm). For 2 hr F Rating, the annular space between cable and periphery of opening shall be min 0 in. (point contact) to max 2 in. (51 mm). Through penetrating product to be rigidly supported on both sides of floor or wall assembly.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form. In floors, forming material is recessed min 1/4 in. (6 mm) below top surface of floor. In walls, forming material is centered in the mid-depth of wall and recessed a min of 1/4 in. (6 mm) from both surfaces of the wall to accommodate the fill material.

   B. **Fill Void or Cavity Materials** – Sealant – Min 1/4 in. (6 mm) thickness of fill material applied within the annulus, flush with top surface of floor and with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of fill material applied to the penetrant/concrete interface at the point contact location on the top surface of floor or both sides of wall.

   **3M COMPANY**

   **3M FIRE PROTECTION PRODUCTS** – FB-1000 NS, FB-1003SL or FB-3000 WT

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Floor assembly may also be constructed of any min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening 6 in. (152 mm).

   See **Concrete Blocks** (CAZT) and **Precast Concrete Units** (CFTV) categories in Fire Resistance Directory for names of manufacturers.

2. **Cables** – Aggregate cross-sectional area of cables in opening to be max 48 percent of the cross-sectional area inside the sleeve or opening. Annular space between cables and periphery of opening or sleeve shall be min of 0 in. (point contact) to max 2 in. (51 mm). Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cable may be used;
   - A. Max 400 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   - B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   - C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   - D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   - E. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   - F. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   - G. Max No. 18 AWG RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   - H. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   - I. Max 4 Pair No. 22 AWG (or smaller) Cat 6 copper conductor with PVC insulation and jacket.
   - J. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   - K. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   - L. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   - M. **Through Penetrating Product** – Any cables, **Armored Cable**+ or **Metal Clad Cable**+ currently Classified under the Through Penetrating Product category.

3. **Firestop System** – The firestop system shall consist of the following:
   - A. **Firestop Device** – One firestop device module centered within the opening. The firestop device module consists of a 12 in. (305 mm) long galv steel split sleeve with galv steel flange plates. Firestop device module to be installed in accordance with the accompanying installation instructions. The space between the firestop device module and the periphery of the opening shall be min 0 in. (point contact) to max 1 in. (25 mm). Firestop device module secured in place by means of steel flange plates sized to accommodate the firestop device module. Steel flange plate installed on top sides of concrete floor or both sides of a wall or hollow core floor and secured around firestop device module with steel screws. The steel flange plate is then secured to both sides of the floor or wall assembly with masonry screws. The firestop device module is to be installed with its ends projecting an equal distance beyond each surface of the floor or wall assembly. After the installation of the cables (Item 2) and the packing material (Item 3B, if required), the supplied putty material (Item 3C) is to be packed into the end(s) of the firestop device with care taken to fill the interstices between the cables. A minimum depth of 1 in. (25mm) is required for the putty material at each end of device on the wall assemblies and the top side for floor assemblies.

   **3M COMPANY**

   **3M FIRE PROTECTION PRODUCTS** – 3M Fire Barrier Putty Sleeve Kit DT 100, DT 200 or DT 400
System No. C-AJ-3310 continued

B. **Packing Material** – (Required for installation with cable fill of less than 40 percent. Optional on DT 100 and DT200 assemblies in wall assemblies.) – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into top end of sleeve (Item 3A) as a permanent form. Packing material to be recessed from top end of sleeve to accommodate the required thickness of fill material.

C. **Fill, Void or Cavity Material** – After the installation of the packing material (Item 3B, if required), the supplied putty material is to be packed into each end of the firestop device. A min 1 in. (25mm) depth of the putty material is required at each end of device on the wall assemblies and the top side for floor assemblies.

2. **Cables** – Aggregate cross-sectional area of cables to be max 65 percent of the cross-sectional area of the opening. The annular space between cables and between cables and periphery of opening shall be min of 0 in. (point contact) to max 2 in. (51 mm). Any combination of the following types and sizes of cables may be used:
   - Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   - Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   - Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   - Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   - Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   - Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   - Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   - RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   - Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   - Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   - Through Penetrating Product* – Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category.

3. **Fill, Void or Cavity Material** – Min 2-1/2 in. (64 mm) thickness of fill material applied within the annulus, flush with top surface of floor or both surfaces of wall. Foam to be injected into the interstices between all cables. An additional 1/2 in. (13 mm) bead of foam shall be applied at the point contact locations.

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m3) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diameter of opening is nom 5 in. (127 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallc Sleeve** — *(Optional)* — Nom 2 or 4-1/2 in. (51 or 114 mm) diameter Schedule 5 (or heavier) steel sleeve or rigid steel conduit or electrical metallic tubing cast or grouted into floor or wall flush with floor or wall surfaces.

3. **Cables** — Aggregate cross-sectional area of bundled cables in opening to be max 60 percent of the cross-sectional area of the opening. Cables to be tightly bundled together and rigidly supported on both sides of the floor or wall assembly. Any combination of the following types and sizes of cables may be used:

   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   B. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) insulation and jacket.
   C. Max 3/C No. 2 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   D. Max 7/C No. 12 AWG copper conductor power and control cables with PVC or cross-linked polyethylene (XLPE) insulation and jacket and PVC jacket.
   E. Multiple fiber optic communication cables jacketed with PVC and having a max outside diameter of 1/2 in. (13mm).
   F. Max 3/C copper conductor No. 10 AWG (or smaller) with bare aluminum ground, PVC insulated steel or aluminum Metal-Clad cable.

4. **Firestop System** — The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Material** — Plug sized for the steel sleeve or opening diameter to be friction-fitted within the sleeve or opening such that the outer circumference of the dome-shaped plug is flush with the top surface of the floor or with both surfaces of the wall. Plug cut to fit around the cable bundle and installed tightly within the opening.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — 3M™ Fire Barrier Plug PLG2, 3M™ Fire Barrier Plug PLG4

   B. **Fill, Void or Cavity Material** — *(Not Shown)* — Fill material forced into interstices of cables to max extent possible.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — CP 25WB+ Caulk or FB-3000 WT Sealant.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
**System No. C-BJ-3016**

September 07, 2004
(Formerly System No. 233)

**F Rating** – 4 Hr

T Ratings – 1, 1-1/2 and 2 Hr (See Items 2 and 6)

L Rating At Ambient – 129 CFM/sq ft

L Rating At 400 F – 92 CFM/sq ft

---

1. **Floor or Wall Assembly** – Min 5-1/2 in. thick lightweight or normal weight (100-150pcf) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 1500 sq in. with max dimension of 50 in. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cables** – Individual cable or tightly-bound circular bundle of cables having a max bundle diam of 3 in. Min spacing between individual cables and/or cable bundles is 6 in. Cables rigidly supported on both sides of floor or wall assembly. The following types and sizes of copper conductor cables may be used:
   - A. Max 100 pair No. 24 AWG telephone cable; polyvinyl chloride (PVC) insulation and jacket materials. When max 100 pr telephone cable is used, T Rating is 1-1/2 hr.
   - B. Max 25 pr No. 24 AWG telephone cable; PVC insulation and jacket materials. When max 25 pr telephone cable is used, T Rating is 2 hr.
   - C. Max No. 12 AWG multi conductor power and control cable; PVC or cross-linked polyethylene insulation, PVC jacket. When max No. 12 AWG multi conductor cable is used, T Rating is 2 hr.

3. **Fill, Void or Cavity Materials** – **Wrap Strip** – Nom 1/4 in. thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. wide by 24 in. long strips. Single layer of wrap strip tightly-wrapped around each cable bundle. Wrap strip layer installed with foil side exposed and secured in place with steel wire ties. Wrap strip to extend approx 7/8 in. beyond each face of the intumescent sheet (Item 4) on both sides of the floor or wall assembly.

   **3M COMPANY** – FS-195+

   **3M COMPANY** – CS-195+

4. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheet cut to tightly-follow the contours of the individual cables and the contours of the wrap strip (Item 3) on the cable bundles. Sheets to lap a min of 2 in. on the floor or wall surface on all sides of the opening on both sides of the floor or wall assembly. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface) and secured to floor or wall surface with min 3/16 in. diam by 1-1/4 in. long steel masonry fasteners with min 1-1/4 in. diam steel washers. Max spacing of fasteners not to exceed 6 in. with additional fasteners located on each side of butted seams or slits made to permit installation of the sheet around the individual penetrating items.

   **3M COMPANY** – CP 25WB+

5. **Steel Cover Strip** – Min 2 in. wide strip of min 0.020 in. thick galv steel centered over butted seams of adjoining intumescent sheets and over entire length of each slit made in intumescent sheet (Item 4) to permit installation about the penetrating item(s). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. diam bead of caulk (Item 7). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. OC on each side of seam or slit.

6. **Support Channel** – When area of through opening exceeds 750 sq in., an intermediate support channel shall be installed on each side of floor or wall assembly, flush with floor or wall surface. Support channels to be min 1-5/8 by 1-5/8 in. and formed of min 0.093 in. thick (No. 12 ga) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. When steel support channels are centered beneath butted seams of intumescent sheets, no steel cover strip (Item 5), is required over butted seam. Intumescent sheets secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. diam steel fender washers. When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. OC. on each side of butted seam. When support channel is located away from intumescent sheet seam, fasteners spaced max 6 in. OC. Prior to installation of the intumescent sheet(s), a nom 1/4 in. diam continuous bead of caulk (Item 7) shall be applied as a gasket over the steel support channel. When steel support channels are used, T Rating is 1-1/2 hr.

7. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Generous application of caulk to be applied around the base of the individual cables and contour applied wrap strip on cable bundle at their egress from the intumescent sheet on both sides of the floor or wall assembly. An additional bead of caulk shall be applied to the exposed edges of the wrap strip at its interface with the cable bundle on both sides of floor or wall assembly. An additional 1/4 in. diam bead of caulk shall be edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter. Caukl to be forced into interstices between bundled cables to max extent possible within confines of wrap strip on both sides of floor or wall assembly.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

* **Bearing the UL Classification Mark**

1. **Floor or Wall Assembly** – Min 8 in. (203 mm) thick normal weight (min 140pcf or 2243 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max area of opening 1500 sq in. (9677 cm²) with max dimension of 50 in. (1270 mm).

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cables** – Individual cables or tightly-bound circular bundle of cables having a max bundle diam of 3 in. (76 mm). Min spacing between individual cables and/or cable bundles is 6 in. (152 mm). Cables rigidly supported on both sides of floor or wall assembly. The following types and sizes of copper conductor cables may be used:
   A. Max 100 pair No. 24 AWG telephone cable; polyvinyl chloride insulation and jacket materials. **When max 100 pair telephone cable is used, T Rating is 1 hr.**
   B. Max 25 pair No. 24 AWG telephone cable; polyvinyl chloride insulation and jacket materials. **When max 25 pair telephone cable is used, T Rating is 1-1/2 hr.**
   C. Max No. 12 AWG multi conductor power and control cables; polyvinyl chloride or cross-linked polyethylene insulation, polyvinyl chloride jacket. **When max No. 12 AWG multi conductor cable is used, T Rating is 1 hr.**

   When an individual cable of the types listed above is installed in a max 1 in. (25 mm) diam through opening in the intumescent sheets (Item 3), the T Rating is 1-1/2 hr.

3. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheet cut to tightly-follow the contours of the individual cable or cable bundle but with a nom 1/4 in. to 3/8 in. (6 mm to 10 mm) wide annular space maintained between the penetrating item and the edges of the cutout in the intumescent sheet. Sheets to lap a min of 2 in. (51 mm) on the floor or wall surface on all sides of through opening on both sides of the floor or wall assembly. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface) and secured to floor or wall surface with min 3/16 in. (5 mm) diam by 1-1/4 in. (32 mm) long steel masonry fasteners with min 1-1/4 in. (32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of butted seams or slits made to permit installation of the sheet around individual penetrating items.

   **3M COMPANY** – CS-195+

4. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min. 0.020 in. (0.51 mm) thick galv steel centered over butted seams of adjoining intumescent sheets and over entire length of each slit made in intumescent sheet (Item 3) to permit installation about the penetrating item(s). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulk (Item 6). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

5. **Support Channel** – When area of through opening exceeds 750 sq in. (19 m), an intermediate support channel shall be installed on each side of floor or wall assembly, flush with floor or wall surface. Support channels to be min 1-5/8 in. by 1-5/8 in. (41 mm by 41 mm) and formed of min 0.093 in. (2.4 mm) thick (No. 12 gauge) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. When steel support channels are centered beneath butted seams of intumescent sheets, no steel cover strip (Item 4) is required over butted seam. Intumescent sheets secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. (76 mm) OC on each side of butted seam. When support channel is located away from intumescent sheet seam, fasteners spaced max 6 in. OC. Prior to installation of the intumescent sheet(s), a nom 1/4 in. (6 mm) diam continuous bead of caulk (Item 6) shall be applied as a gasket over the support channel.

6. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Nom 1/4 in. (6 mm) diam continuous bead of caulk to be applied to edge intumescent sheet at its interface with surface of floor or wall around entire perimeter. (Item 5). Caulk also applied as a sealant over intumescent sheet seams.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

7. **Fill, Void or Cavity Material** – **Putty** – Moldable putty material kneaded by hand and packed into nom 1/4 in. to 3/8 in. (6 mm to 10 mm) annular space between individual cable or cable bundle and edges of cutout in intumescent sheet on both sides of floor or wall assembly. Putty material to be “domed” min 1 in. (25 mm) beyond intumescent sheet around perimeter of individual cable or cable bundle on both sides of floor or wall assembly.

   **3M COMPANY** – MP+ Stix

System No. F-A-3001
September 07, 2004
(Formerly System No. 560)
F Ratings – 3 Hr
T Rating – 0 Hr
L Rating At Ambient – 76 CFM/sq ft
L Rating At 400 F – 7 CFM/sq ft

1. **Floor Assembly** – Min 4-1/2 in. thick lightweight or normal weight (100-150 pcf) concrete. Max area of rectangular through opening 500 sq in. with max length of 50 in. and with max width of 10 in.

2. **Cable** – Cables installed individually or in tight bundles having a max outside diam of 2 in. Individual or bundled cables installed along longitudinal centerline of through opening and spaced 4 to 8 in. apart. Cables rigidly supported on both sides of floor assembly. The following types and sizes of cable may be used:
   A. Multiple fiber optical communication cables jacketed with polyethylene (PE) or polyvinyl chloride (PVC) and having a max outside diam of 3/4 in.
   B. Max 150 pair No. 24 AWG copper conductor telephone cables with PVC insulation and jacket materials.

3. **Support Hanger** – Min 1 in. wide strips of min 0.034 in. thick (20 gauge) galv steel sheet bent to form a “hat”-shape with each “brim” of the hat shape bearing 1-1/2 to 2 in. on the top surface of the floor and with a min “crown” depth of 2 in. to accommodate the forming material (Item 4) and the caulk fill material (Item 5). Support hangers spaced max 8 in. OC with at least one support hanger located on each side of each cable bundle. When steel cover plate (Item 6) is not used and when width of opening is greater than 6 in., ends of each support hanger shall be secured to top surface of floor with min 3/16 in. diam by 1-1/2 in. long steel anchor bolts, or equivalent, in conjunction with min 1-1/4 in. diam steel fender washers.

3A. **Support Strip** (Not shown) – When steel cover plate (Item 6) is not used and when the annular space between the cables and the long edges of the through opening is greater than 2 in., support strips are required along both long edges of the opening. Support strips to consist of min 2 in. wide strips of min 0.034 in. thick (20 gauge) galv steel. Length of support strips to be 1 in. less than length of opening. Support strips placed atop support hangers within opening prior to installation of forming material (Item 4).

4. **Forming Material** – Min 1 in. thick mineral wool batt insulation material having a min density of 4 pcf tightly friction-fitted into through opening, atop support hangers, to prevent leakage of the caulk fill material (Item 5). Top surface of mineral wool batt forming material to be recessed min 1 in. from top surface of concrete floor slab.

5. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Applied to fill the through opening to a min depth of 1 in., flush with top surface of floor.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant.

6. **Steel Cover Plate** – Min 0.034 in. thick (20 gauge) galv steel sheet cut to closely follow the contours of the individual and bundled telephone cables and with a min lap of 2 in. on all sides of the through opening. Steel cover plate sections secured to top surface of floor with min 3/16 in. diam by 1-1/2 in. long steel anchor bolts, or equivalent, in conjunction with min 1-1/4 in. diam steel fender washers. Max spacing of cover plate fasteners not to exceed 8 in. OC with additional fasteners required on each side of butted seams. When width of through opening is 8 in. or less, steel cover plate is not required.

1. **Floor Assembly** – Min 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***. Floor may also be constructed of any min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600 - 2400 kg/m³) concrete. Max diam of opening is 2 in. (51 mm).

   See **Precast Concrete Units** (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Cables** – Aggregate cross-sectional area of cables in opening to be max 18 percent of the cross-sectional area of opening. Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of copper conductor cable may be used:

   A. Max 25 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   B. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   C. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.
   D. Max 3/C No. 2/0 AWG copper or aluminum conductor SE cables; PVC insulation and jacket.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with each surface of floor. Min 1/2 in. (13 mm) thickness of fill material applied into interstices of cables on both sides of floor. Min 1/2 in. (13 mm) diam bead of caulk applied to the cable/concrete interface at the point contact locations on both surfaces of floor.

   **3M COMPANY** – CP 25 WB+, IC 15WB+ caulk or FB-3000 WT sealant

**System No. F-A-3017**

May 18, 2005
F Rating – 3 Hr
T Rating – 1/4 Hr

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete.

2. **Firestop Device** – Cast in place firestop device permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 3-1/2 in. (89 mm) above top surface of floor.

   **3M COMPANY** – 3M Fire Barrier Cast-In Device 2MCID, 3MCID, 4MCID

3. **Cables** – Max cable bundles of 2-1/2, 3 and 4 in. (64, 76, and 102 mm) diam for 2MCID, 3MCID and 4MCID devices, respectively. Annular space between cables and periphery of opening shall be min of 0 in. (point contact) to max 2 in. (0 mm to max 51 mm) Cables may or may not be routed through flexible metal conduit with or without vinyl coating. Cables to be rigidly supported on both sides of floor assembly. Any combination of the following types and sizes of cable may be used;
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and-insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product** – Any cables, armored cable+ or metal clad cable+ currently classified under the Through Penetrating Product category.

   See **Through Penetrating Product (XHLY)** category in the Fire Resistance Directory for names of manufacturers

4. **Packing Material** – Min 2 in. (51 mm) thick of min 4 pcf (64kg/m³) mineral wool batt insulation firmly packed within annulus, flush with the top surface of floor.

4A. **Fill, Void or Cavity Materials** – Sealant, Caulk or Putty* (optional, not shown) – As an option, the packing material (Item 2B) may be reduced in thickness by 1/4 to 1/2 in. (6 mm to 13 mm) and recessed from the top surface of floor to accommodate a 1/4 to 1/2 in. (6 mm to 13 mm) thickness of sealant, caulk or putty, installed within annulus, flush with the top surface of floor.

1. **Floor Assembly** – The fire-rated unprotected concrete and steel floor assembly shall be constructed of the materials and in the manner specified in the individual D900 Series designs in the UL Fire Resistance Directory and as summarized below:
   A. Concrete – Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete.
   B. Steel Floor and Form Units* – Composite or noncomposite max 3 in. (76 mm) deep fluted galv units as specified in the individual Floor-Ceiling design.

2. **Firestop Devices*** – The firestop devices are cast in place and permanently embedded during concrete placement or grouted in concrete assembly in accordance with accompanying installation instructions.
   A. Firestop Device – Metal Deck Adapter* – Adapter installed through opening in deck and secured with four sheet metal screws to deck in accordance with installation instructions.
   B. Firestop Device – Snapped into top of metal deck adapter in accordance with accompanying installation instructions. The device may be trimmed flush with top surface of floor or may project up to a max 5-1/2 in. (140 mm) above top surface of floor.

3. **Cables** – A max 3 in. (76 mm) diam of tightly bundled cables to be installed eccentrically or concentrically within the firestop system. Annular space between cables and periphery of opening shall be min of 0 in. (point contact) to max 1-1/2 in. (0 mm to max 38 mm). Cables to be rigidly supported on both sides of floor assembly. Any combination of the following types and sizes of cable may be used;
   A. Max 300 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. Through Penetrating Product* – Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category.

   See Through Penetrating Product (XHL Y) category in the Fire Resistance Directory for names of manufacturers

4. **Packing Material** (not shown) – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into the top of the firestop device (Item 2B) a permanent form, flush with the top surface of the floor.

*Bearing the UL Classification Mark

1. **Floor Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max area of opening is 432 in.² (0.28 m²) with max dimension of 24 in. (610 mm).

2. **Sheathing** – Nom 1-5/8 by 4 in. (41 by 102 mm) high C4X5.4 structural steel channels with mitered ends formed into four-sided enclosure with welded corners. Inside dimensions of enclosure, between flange tips, to be equal to the inside dimensions of the floor opening. Sheathing channels secured to the top surface of the concrete floor by means of nominal nom 1/4 in. (6 mm) diam by 1-3/4 in. (45 mm) long concrete anchors with nom 1/4 in. (6 mm) by 1-1/4 in. (32 mm) diam steel fender washers. Rope of putty (Item 7) installed as gasket between sheathing and top of floor.

3. **Cable Rack** – Max 18 in. (457 mm) wide ladder type cable rack with 2 in. (51 mm) side rails fabricated from min 0.136 in. (3.5 mm) thick steel and with nom 1 in. (25 mm) wide rungs spaced max 9 in. (229 mm) OC. Width of cable rack to be min 4 in. (102 mm) less than width of opening. Side rails of cable rack to be offset min 2 in. (51 mm) from side edges of opening. Cable rack welded to top flange of sheathing channel (Item 2).

4. **Cables** – Max 62 percent fill of cables calculated based on the inside dimensions of the floor opening and the outside dimensions of the cable bundle. Power cables to be installed in accordance with the National Electrical Code (NFP A No. 70). The cables are to be laced, banded or tied to the cable rack to form a tight bundle against one side of the opening with minimal interstices between cables. The annular space between the cables and the side of the opening with the cable rack shall be 0 in. (point contact). The annular space between the cable bundle and the sides of the opening shall be min 2 in. (51 mm) to max 9 in. (229 mm). Any combination of the following types and sizes of cables may be used:
   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.
   B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
   C. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+.
   D. Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+.
   E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.
   F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.
   G. Max 100 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.
   H. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   I. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.
   J. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   K. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.
   L. Max 62.5/125 micron fiber optic cable with having a min Riser rating.
   M. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.

When Item 4A, 4B, 4C, 4D, 4E or 4F is used, T, FT abd FTH Ratings are 1 hr. Otherwise, T, FT and FTH Ratings are 1-1/2 hr.
5. **Fill, Void or Cavity Material** – **Putty** – Min 1/4 in. (6 mm) diam continuous rope of putty applied beneath sheathing (Item 2) around entire perimeter of through opening. Min 1/8 in. (3mm) thick by 4 in. (102mm) wide continuous band of putty installed around the cable bundle such that the top edge of the band is flush with the top surface of the floor. Prior to installation of the steel cover plate all voids between the pillows and the concrete shall be filled with a min 1/2 in. (13 mm) depth of putty and a min 1/4 in. (6 mm) diam rope of putty shall be applied over the top surface of the steel sheathing. After installation of the steel cover a “dome” of putty fill material shall be tightly packed around the perimeter of the cable bundle at its egress from the steel cover. The “dome” of putty shall be min 1 in. (25 mm) thick and extend to a min height of 1 in. (25 mm) above the top of the steel cover with the interstices between cables filled with putty to the maximum extent possible.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – MP+ Putty

6. **Fill Void or Cavity Material** – **Pillows** – Nom 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cables and the concrete floor. Pillows installed with 9 in. (229 mm) dimension projecting through the floor and centered in the floor thickness. The pillows may be cut to decrease the width and repaired with min 0.002 in. (0.05mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13mm).

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

7. **Steel Cover** – Min 20 ga galv steel plate cut to tightly follow contours of cable bundle and secured to structural steel channel sheathing (Item 2) with No. 8 self-tapping screws spaced max 6 in. (152 mm) OC.

*Bearing the UL Listing Mark
*Bearing the UL Classification Mark

Firestop System

The firestop system shall consist of the following items following types of cables may be used:

1. **Floor Assembly** – Min 8 in. thick reinforced normal weight (145-150pcf or 2300-2400 kg/m³) concrete. Max area of opening is 288 sq in. (1858 cm²) with max dimension of 24 in. (610 mm).

2. **Steel Angles** – Nom 2 by 2 by 1/4 in. (51 by 51 by 6 mm) steel angles cast into the concrete floor flush with its top surface.

3. **Sheathing** – Nom 1-5/8 by 4 in. (41 by 102 mm) high C4X5.4 structural steel channels with mitered ends formed into four sided enclosure with welded corners. Inside dimensions of enclosure, between flange tips, to be equal to the inside dimensions of the floor opening. Sheathing channels welded to steel angles (Item 2) around the entire perimeter of the opening.

4. **Cable Rack** (Not shown) – Max 20 in. (508 mm) wide ladder type cable rack fabricated from min 0.136 in. (3.45 mm) thick steel channels with nom 2 in. (51 mm) wide side rails and nom 1 in. (25 mm) wide rungs spaced 9 in. (229 mm) OC. Cable rack shall be welded to top flange of sheathing channel (Item 3).

5. **Cables** – Max 34 percent fill (based on the available area of the opening) of either telecommunication or power cable. The cables are to be laced to the cable rack and to each other to form a tight bundle against one side of the opening with min interstices between cables. The following types of cables may be used:
   A. Max 72 pair No. 26 AWG telecommunication cable with PVC insulation and jacket materials. When telecommunication cable is used, the T Rating is 2 hr.
   B. Single conductor max 750 kcmil Type RHW power cable. When single conductor power cable is used, T Rating is 1-1/2 hr.

6. **Firestop System** – The firestop system shall consist of the following items:

   A. **Stirrups** – Nom 2 in. (51 mm) wide by 1/8 in. (3.2 mm) thick steel strip formed into stirrup with sufficient length to support intumescent sheet (Item 6B) approx flush with bottom surface of floor. Top of stirrup angled for bolt attachment against web of steel channel (Item 3). Bottom of stirrup bent 90 degrees to form a 2 in. (51 mm) long flange for support and attachment of the intumescent sheet. The stirrups shall be located in each corner of the opening and spaced max 12 in. (305mm) OC.

   B. **Fill, Void or Cavity Material** – Intumescent Sheet – Rigid aluminum foil faced sheet with galv steel sheet backer. Intumescent sheet cut to tightly fit inside through opening atop stirrup flanges (Item 6A) and to closely follow the contours of the cable bundle. Intumescent sheet installed in opening atop stirrup flanges, with galv steel sheet face down, and recessed max 1/8 in. (3.2 mm) from bottom surface of floor. Intumescent sheet secured to each stirrup with 1/4 in. (6 mm) diam by 1 in. (25 mm) long steel bolts with nuts and washers or min No. 8 self-tapping sheet metal screws and 1-1/4 (32 mm) fender washers. Second intumescent sheet cut to fit outside dimensions of sheathing and to tightly follow contours of the cable bundle. Intumescent sheet installed atop sheathing, with galv steel sheet face up, and secured to top flange of sheathing channels in conjunction with the steel cover plate (Item 6D) with 1/4 in. (6 mm) diam by 1 in. (25 mm) steel bolts with nuts and washers spaced max 8 in. (203 mm) OC.

3M COMPANY – CS-195+

C. **Fill, Void or Cavity Materials – Graphite Seal, Caulk, Sealant or Putty** – One layer of 1/2 in. (13 mm) x 1/16 in. (1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor around entire perimeter of through opening. Additional putty applied at the perimeter of each intumescent sheet and the base of the cable bundle at its egress from each intumescent sheet. After installation of the intumescent sheet within the through opening, a min 1/2 in. (13 mm) diam bead of putty shall be installed around the top edges of the sheet and the periphery of the opening. Additional putty to be “domed” around the perimeter of the cable bundle to a min thickness of 1 in. (25 mm) and to a height of 2 in. (51 mm) atop the intumescent sheet. Prior to installation of the top intumescent sheet and steel cover plate, a min 1/2 in. (13 mm) diam bead of putty shall be applied over the top surface of the steel sheeting. After installation of the top intumescent sheet and the steel cover plate, A “dome” of putty fill material shall be tightly packed around the perimeter of the cable bundle at its egress from the steel cover plate. The “dome” of putty shall be min 1 in. (25 mm) thick and extend to min height of 2 in. (51 mm) above the top of the steel cover plate.

3M COMPANY – E-FIS or Ultra GS seals, CP 25WB+ caulks, FB-3000 WT sealant or MP+ Stix putty.

D. **Steel Cover Plate** (Optional) – Min 0.100 in. (2.54 mm) (12 gauge) galv steel cover plate cut to fit the contour of the cable bundle. Steel cover plate placed atop the intumescent sheet and secured to sheathing, through intumescent sheet, with 1/4 in. (6 mm) diam by 1 in. (25 mm) long steel bolts with nuts and washers spaced max 8 in. (203 mm) OC.

1. **Floor Assembly** – Min 6 in. (152 mm) thick UL Classified hollow-core Precast Concrete Units*. Floor may also be constructed of any min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m²) concrete. Max diam of opening is 4 in. (102 mm).

See Precast Concrete Units (CFTV) category in the Fire Resistance Directory for names of manufacturers.

2. **Cables** – Aggregate cross-sectional area of cables in opening to be min 24 percent to max 60 percent of the cross-sectional area of opening. Cables to be installed either concentrically or eccentrically within the firestop system. The annular space between cables and periphery of opening shall be min of 0 in. (point contact) to max 2 in. (0 mm to max 51 mm). Cables to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of copper conductor cable may be used:
   A. Max 1/C 350 kcmil (or smaller) cable with PVC jacket.
   B. Max 150 pair 24 ga (or smaller) cable with PVC insulation and jacket.
   C. 3/C 2/0 aluminum or copper (or smaller) SE cable with ground with PVC insulation and jacket.
   D. Max 3/C No. 12 AWG (or smaller) MC cable with PVC insulation and jacket.
   E. Max RG 6/U No. 18 AWG (or smaller) coaxial cable with PVC insulation and jacket.
   F. Max 2-125/250 fiber optic cable with polyethylene insulation.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 1-1/2 in. (38 mm) thickness of min 4 pcf (64 kg/m²) density mineral wool batt insulation firmly packed into the opening at the bottom surface of the floor. Min 1 in. (25 mm) thickness of min 4 pcf (64 kg/m²) density mineral wool batt insulation firmly packed into the top surface of the floor and recessed from the top surface to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Materials* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of fill material applied within annulus, flush with top surface of floor. Min 1/2 in. (13 mm) diam bead of fill material applied to the cable/concrete interface at the point contact location at the top surface of floor.

*3M COMPANY – FireDam 150+, CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant.

*Bearing the UL Classification Mark

1. **Floor Assembly** – Min 8 in. (203 mm) thick lightweight or normal weight (100-150 pcf or 1600 to 2400 kg/m³) reinforced concrete. Max area of opening is 360 sq in. (0.23 m²) with max dimension of 30 in. (763 mm).

1A. **Riser** – (Not Shown) – Nom 1-5/8 by 4 in. (41 by 102 mm) high C4X5.4 structural steel channels with mitered ends formed into four-sided enclosure with welded corners. Inside dimensions of enclosure, between flange tips, to be equal to the inside dimensions of the floor opening. Channels secured to floor with min 3/16 in. (5 mm) diam by min 1-1/4 in. (32 mm) long masonry anchors.

2. **Cables** – Max 40 percent fill (based on the available area of the opening). The cables are to be laced to the cable rack and to each other to form a tight bundle against one side of the opening with min interstices between cables. The annular space between the cables and periphery of opening shall be min 0 in. (point contact) to max 12 in. (305 mm). Any combination of the following types and sizes of cables may be used:

   A. Max 750 kcmil single-conductor power cables; cross-linked polyethylene (XLPE) insulation.

   B. Max 7C No. 12 AWG (or smaller) multi conductor power and control cables; XLPE insulation, XLPE or polyvinyl chloride (PVC) jacket.

   C. Max 300 pair No. 22 AWG (or smaller) copper conductor with PVC insulation and jacket.

   D. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.

   E. Max 4/C No. 2/0 AWG (or smaller) copper or aluminum conductor cables with XLPE or PVC insulation and jacket.

   F. Max 1-10/125 Fiber Optic (F.O.) cable with PVC insulation and jacket.

   **T, FT and FTH Ratings are 2 Hr for cable F and 3/4 Hr for all other cables.**

2A. **Cable Rack** – (Not shown) – Max 20 in. (508) wide ladder type cable rack fabricated from min 0.136 in. (3.5 mm) thick steel channels with nom 2 in. (51 mm) wide side rails and nom 1 in. (25 mm) wide rungs spaced 9 in. (229 mm) OC. Cable rack shall be welded to top flange of riser (Item 1A).

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill Void or Cavity Material** – **Pillows** – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between cables and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through floor or wall and centered within the opening.

   **3M COMPANY** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

   B. **Fill Void or Cavity Material** – **Putty** – After installation of pillows (Item 3B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty. The individual cables may be wrapped with a min 1/4 in. (6 mm) thick by min 2 in. (51 mm) width of putty such that the putty extends approximately 1/2 in. (13 mm) above top surface of floor.

   **3M COMPANY** – MP+, Cable Wrap

   **L Ratings are 7 and 4 CFM/sq ft. at ambient and 400° F, respectively, when individual cables are wrapped with 3M Cable Wrap or MP+ putty in accordance with the installation instructions. L Ratings are 22 and 21 CFM/sq ft. at ambient and 400° F, respectively, when individual cables are not wrapped with 3M Cable Wrap or MP+ putty.**

*Bearing the UL Classification Mark*
1. **Floor Assembly** – Min 8 in. (203 mm) thick reinforced normal weight (145-150 pcf or 2300-2400 kg/m³) concrete. Max area of opening is 288 in.² (0.19 m²) with max dimension of 24 in. (610 mm).

2. **Sheathing** – Nom 1-5/8 by 4 in. (41 by 102 mm) high C4X5.4 structural steel channels with mitered ends formed into four-sided enclosure with welded corners. Inside dimensions of enclosure, between flange tips, to be equal to the inside dimensions of the floor opening. Sheathing channels secured to the top surface of the concrete floor by means of nominal nom 1/4 in. (6 mm) diam by 1-3/4 in. (45 mm) long concrete anchors with nom 1/4 in. (6 mm) diam steel fender washers.

3. **Cable Rack** – (Not shown) – Max 20 in. (508 mm) wide ladder type cable rack with 2 in. (51 mm) side rails fabricated from min 0.136 in. (3.5 mm) thick galv steel and nom 1 in. (25 mm) wide rungs spaced 9 in. (229 mm) OC. Cable tray shall be welded to top flange of sheathing channel (Item 2).

4. **Cables** – Max 34 percent fill (based on the available area of the opening) of various types of telecommunication or power cables. The cables are to be laced to the cable rack and to each other to form a tight bundle against one side of the opening with min interstices between cables. The following types of cables may be used:
   A. Max 72 pair No. 26 AWG (or smaller) telecommunication cable with polyvinyl chloride (PVC) insulation and jacket materials.
   B. Single conductor max 1000 kcmil Type power cable.
   C. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   D. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   E. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   F. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   G. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

   When Item 4C is used, T, FT and FTH Ratings are 1/2 hr. Otherwise, T, FT and FTH Ratings are 1 hr.

5. **Firestop System** – The firestop system shall consist of the following items
   A. **Fill, Void or Cavity Material** – **Intumescent Sheet** – Rigid aluminum foil faced sheet with galv steel sheet backer. Intumescent sheet cut to size and to extend 2 in. (51 mm) beyond the steel sheathing (Item 2) over the annular space of the opening. Intumescent sheet with galv sheet face up secured to top flange of sheathing channels (Item 2) using nom 1/4 in. (6 mm) diam by 1 in. (25 mm) long steel bolts with nuts and washers spaced max 8 in. (203 mm) OC.

   **3M COMPANY** – Type CS-195+

   B. **Steel Channels** – Nom 9 in. deep by 0.028 in. (229 by 0.71 mm) thick steel channels with 2 in. (51 mm) flanges formed into a three sided steel sleeve within opening. Top flange of steel channel installed over intumescent sheet (Item 5A) and extended into annular space within opening with edge of bottom flange resting against inside surface of floor opening. Top flange of channels secured to intumescent sheet (Item 5A) with steel sheet metal screws spaced max 8 in. (203 mm) OC.

   **3M COMPANY** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

---

**Concrete Series**

**Cables**

**Through Penetrations**
System No. F-B-3016 continued

D. Fill, Void or Cavity Materials* – Graphite Seal, Caulk, Sealant and Putty – One layer of 1/2 in. (13 mm) wide by 1/16 in. (1.6 mm) thick adhesive-backed graphite intumescent seal or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied beneath sheathing around entire perimeter of through opening. Prior to installation of the intumescent sheet (and optional steel cover plate, when used), a min 1/2 in. (13 mm) diam bead of caulk, sealant or putty shall be applied over the top surface of the steel sheathing. After installation of the intumescent sheet a “dome” of putty fill material shall be tightly packed around the perimeter of the cable bundle at its egress from the intumescent sheet and pillows. The “dome” of putty shall be min 1 in. (25 mm) thick and extend to a min height of 2 in. (51 mm) above the top of the intumescent sheet and pillows. The interstices between cables are to be filled with putty to the maximum extent possible.

3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

E. Steel Cover Plate – (Optional, Not Shown) – Min 0.100 in. (2.54 mm) galv steel cover plate cut to fit the contour of the cable fill and to cover the entire top surface of the firestop system. Cover plate secured to sheathing, through intumescent sheet, with the same nom 1/4 in. (6 mm) diam by 1 in. (25 mm) long steel bolts with nuts and washers used to secure the intumescent sheet.

1. **Floor Assembly** – Min 8 in. (203 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max area of opening is 432 in.² (0.28 m²) with max dimension of 24 in. (610 mm).

2. **Sheathing** – Nom 1-5/8 by 4 in. (41 by 102 mm) high C4X5.4 structural steel channels with mitered ends formed into four-sided enclosure with welded corners. Inside dimensions of enclosure, between flange tips, to be equal to the inside dimensions of the floor opening. Sheathing channels secured to the top surface of the concrete floor by means of nominal nom 1/4 in. (6 mm) diam by 1-3/4 in. (45 mm) long concrete anchors with nom 1/4 in. (6 mm) by 1-1/4 in. (32 mm) diam steel fender washers. Rope of putty (Item 7) installed as gasket between sheathing and top of floor.

3. **Cable Rack** – Max 18 in. (457 mm) wide ladder type cable rack with 2 in. (51 mm) side rails fabricated from min 0.136 in. (3.5 mm) thick steel and with nom 1 in. (25 mm) wide rungs spaced max 9 in. (229 mm) OC. Width of cable rack to be min 4 in. (102 mm) less than width of opening. Side rails of cable rack to be offset min 2 in. (51 mm) from side edges of opening. Cable rack welded to top flange of sheathing channel (Item 2).

4. **Cables** – Max 62 percent fill of cables calculated based on the inside dimensions of the floor opening and the outside dimensions of the cable bundle. Power cables to be installed in accordance with the National Electrical Code (NFPA No. 70). The cables are to be laced, banded or tied to the cable rack to form a tight bundle against one side of the opening with minimal interstices between cables. The annular space between the cables and the side of the opening with the cable rack shall be 0 in. (point contact). The annular space between the cable bundle and the sides of the opening shall be min 2 in. (51 mm) to max 9 in. (229 mm). Any combination of the following types and sizes of cables may be used:
   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.
   B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
   C. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+.
   D. Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+.
   E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.
   F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.
   G. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   H. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.
   I. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   J. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.
   K. Max 62.5/125 micron fiber optic cable with having a min Riser rating.
   L. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.

5. **Fill, Void or Cavity Material** – Putty – Min 1/4 in. (6 mm) diam continuous rope of putty applied beneath sheathing (Item 2) around entire perimeter of through opening. Min 1/8 in. (3mm) thick by 4 in. (102mm) wide continuous band of putty installed around the cable bundle such that the top edge of the band is flush with the top surface of the floor. Prior to installation of the steel cover plate all voids between the
System No. F-B-3017 continued

pillows and the concrete shall be filled with a min 1/2 in. (13 mm) depth of putty and a min 1/4 in. (6 mm) diam rope of putty shall be applied over the top surface of the steel sheathing. After installation of the steel cover a “dome” of putty fill material shall be tightly packed around the perimeter of the cable bundle at its egress from the steel cover. The “dome” of putty shall be min 1 in. (25 mm) thick and extend to a min height of 1 in. (25 mm) above the top of the steel cover with the interstices between cables filled with putty to the maximum extent possible.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – MP+ Putty

6. **Fill Void or Cavity Material** – **Pillows** – Nom 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cables and the concrete floor. Pillows installed with 9 in. (229 mm) dimension projecting through the floor and centered in the floor thickness. The pillows may be cut to decrease the width and repaired with min 0.002 in. (0.05mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13mm).

3M COMPANY
3M FIRE PROTECTION PRODUCTS – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

7. **Steel Cover** – Min 20 ga galv steel plate cut to tightly follow contours of cable bundle and secured to structural steel channel sheathing (Item 2) with No. 8 self-tapping screws spaced max 6 in. (152 mm) OC.

1. **Floor Assembly** – Min 8 in. (203 mm) thick reinforced lightweight normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Max area of opening is 400 in.² (0.26 m²) with max dimension of 20 in. (508 mm).

2. **Cables** – Max 5 in. (127 mm) diam 161 KV 2000MM² power cables with nom 0.91 in. (23 mm) thick polyethylene jacket. Max three cables per opening. Annular space between cables to be min 5 in. (127 mm) to max 8 in. (203 mm). Annular space between cables and periphery of opening to be min 2 in. (51 mm) to max 10 in. (254 mm).

3. **Firestop System** – The firestop system shall consist of the following items:
   A. **Forming Material** – Nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat. Mat to be tightly rolled into nom 2 in. (51 mm) to nom 10 in. (254 mm) diam cylindrical shapes, compressed min 50 percent in diam and installed edge-first into the annular space to a min 8 in. (203 mm) depth consisting of two 4 in. (102 mm) deep layers. There shall be no voids between cylindrical shapes and the joints between cylindrical shapes shall be staggered between layers. The bottom layer of forming material may extend max 1 in. (25 mm) below the bottom surface of the floor. Top layer of forming material to be recessed from top surface of floor to accommodate the required thickness of fill material (Item 3B).

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Packing Material

   B. **Fill, Void or Cavity Materials** – **Caulk** – Min 1 in. (25 mm) thickness of caulk applied within the annulus, flush with top surface of floor.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – CP 25WB+

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of opening is 8 in. (203 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable** – One cable installed eccentrically or concentrically within opening. Annular space between cable and periphery of opening to be min 0 in. (0 mm) (point contact) to max 1 in. (0 mm to 25 mm). Cable to be rigidly supported on both sides of the wall. The following types and sizes of cable may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) or PVC jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/0 AWG (or smaller) copper or aluminum conductor SER cables with XLPE or PVC insulation and jacket.
   E. Max 4/C No. 2/0 AWG (or smaller) copper conductor, aluminum clad or steel clad TECK 90 cable with or without PVC jacketed.
   F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. Max RG/U coaxial cable with fluorinated ethylene insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. **Through Penetrating Product** – Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category.

3. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to cable/wall interface at point contact location on both sides of wall.

3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 225 sq in. (1452 sq cm) with a max dimension of 22-1/2 in. (572 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the opening installed either concentrically or eccentrically within the firestop system. The annular space between cable and periphery of opening shall be min 0 in. (0 mm) (point contact) to max 4 in. (102 mm). The horizontal space between cable shall be min 1/4 in. (6 mm) to max 4 in. (102 mm). The vertical space between cable shall be min 1-1/2 in. (38 mm) to max 4 in. (102 mm). Cable to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product*** – Any cables, **Armored Cable**+ or **Metal Clad Cable**+ currently Classified under the Through Penetrating Product category.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material** – Caulk, Sealant or Putty – Min 1/2 in. (13 mm) thickness of caulk or putty formed to a min 1 in. (25 mm) width and applied within annulus at all corners of opening and extending a min 1 in. (25 mm) in both directions from each corner, flush with both surfaces of wall. Min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of caulk or putty wrapped applied around each penetrating such that caulk or putty extends approximately 1/2 in. (51 mm) beyond both surfaces of wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of caulk or putty.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – MPS-2+ or CP 25 WB+ or FB-3000 WT

   B. **Fill Void or Cavity Material** – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between penetrants and periphery of opening and installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 67-1/2 sq. in. (435 sq cm) with max dimension of 22-1/2 in. (572 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the opening installed either concentrically or eccentrically within the firestop system. The annular space between cable and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1-1/4 in. (32 mm). The horizontal space between cable shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Cable to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with XLPE or PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product*** – Any cables, **Armored Cable*** or **Metal Clad Cable*** currently Classified under the Through Penetrating Product category.

3. **Fill, Void or Cavity Material*** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/gypsum board interface at the point contact location on both sides of wall.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – CP 25WB+, FireDam 150+, IC 15WB+ caulk or FB-3000 WT sealant

3A Through Penetrations

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening to be 182 in.² (1174 cm²) with a max dimension of 45-1/2 in. (156 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the opening installed either concentrically or eccentrically within the firestop system. The annular space between cable and periphery of opening shall be min 0 in. (0 mm) (point contact) to max 2 in. (51 mm). The horizontal space between cable shall be min 1/4 in. (6 mm) to max 2 in. (51 mm). Cable to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:
   - A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   - B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   - C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   - D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   - E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   - F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   - G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   - H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   - I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   - J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   - K. **Through Penetrating Product* – Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category.**

3. **Firestop System** – The firestop system shall consist of the following:
   - A. **Packing Material** – Min 3-3/4 in. (95 mm) or 5 in. (127 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening for 1 and 2 hr rated assemblies, respectively. Packing material to be recessed from both sides of wall assembly to accommodate the required thickness of fill material.
   - B. **Fill, Void or Cavity Material* – Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

System No. W-J-3177  
January 28, 2014

ANSI/UL1479 (ASTM E814)  
F Ratings – 1 and 2 Hr (See Item 1)  
T Rating – 0 Hr

CAN/ULC S115  
F Ratings – 1 and 2 Hr (See Item 1)  
FT Rating – 0 Hr  
FH Ratings – 1 and 2 Hr (See Item 1)  
FTH Rating – 0 Hr

1. **Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diameter of the opening is 6-1/2 in. (165 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Steel Sleeve** – Nom 6 in. (152 mm)diam (or smaller) steel electrical metallic tubing (EMT) or Schedule 5 steel pipe. The annular space between the steel sleeve and the periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13mm) Sleeve may extend up to 18 in. (457 mm) beyond each surface of the wall.

3. **Cables** – Aggregate cross-sectional area of cables in steel sleeve to be 50 percent of the aggregate cross-sectional area of the sleeve. Cables to be rigidly supported on both sides of wall assembly. The annular space between cables and periphery of sleeve shall be min 0 in. (point contact) to max 1 in. (25mm) Any combination of the following types and sizes of cables may be used:
   A. Max 300 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   B. Max 1-10/125 Fiber Optic (F.O.) cable, PVC insulation and jacket.
   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   F. Max 4 Pair No 22 AWG (or smaller) Cat 6 copper conductor with PVC insulation and jacket.
   G. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   H. Max four aluminum conductor No. 10 AWG (or smaller) aluminum or steel, Armored cable# or Metal-Clad Cable+.

   **AFC CABLE SYSTEMS INC** – MC Lite

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 2 in. (51 mm) thickness of min 4.0 pcf (64 kg/m³) mineral wool batt insulation firmly packed into each end of sleeve as a permanent form. Packing material to be recessed from each end of sleeve to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – **Sealant or Putty** – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of wall. At point contact, a min 1/2 in. (13mm) bead of fill material shall be applied at sleeve/wall interface on both sides of wall when sleeve extends beyond surface of wall. Min 1/2 in. (13 mm) thickness of fill material applied within the sleeve, flush with both ends. Min 1/2 in. (13 mm) thickness of fill material applied within the sleeve, flush with both ends. Min 1/2 in. (13 mm) thickness of fill material applied within the interstices of the cable bundles.
3M COMPANY
3M FIRE PROTECTION PRODUCTS – IC 15WB+, CP 25WB+ or FB-3000 WT

C. Fill, Void or Cavity Material* – (Not Shown) – As an alternate to Item 4B above, min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of the wall. At point contact, a min. ½ in. (13 mm) bead of fill material at sleeve/wall interface on both sides of wall when sleeve extends beyond surface of the wall. Min. 2-½ in. (63 mm) thickness of fill material applied within the sleeve, flush with both ends. Foam to be injected into the interstices between all cables. When this fill material is used, item 4A is not required.

3M COMPANY – Fire Barrier rated Foam, FIP 1 - Step

1. **Wall Assembly** – Min 8 in. (203 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max diam of wall opening shall be 14 in. (356 mm).

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Polyvinyl Chloride (PVC) Sleeve** – Nom 14 in. (356 mm) diam (or smaller) Schedule 80 PVC sleeve cast or grouted into wall assembly. The sleeve shall be sized to extend 1 in. (25 mm) beyond each wall surface.

3. **Cables** – Max 5 in. (127 mm) diam 161 KV 2000MM2 power cables with nom 0.91 in. (23 mm) thick polyethylene jacket. Max three cables per opening. Annular space between cables to be min 1 in. (25 mm) to max 5 in. (127 mm). Annular space between cables and PVC sleeve to be min 1 in. (25 mm) to max 5 in. (127 mm).

4. **Firestop System** – The firestop system shall consist of the following items:

   A. **Metal Enclosure** – Nom 17 by 17 in. (432 by 432 mm) by 10 in. (254 mm) deep, min 0.045 in. (1.14 mm) thick galvanized steel enclosure provided with a 2 in. (51 mm) wide flange on all sides for attachment to the wall. Enclosure to be attached to one side of wall with min 3/8 in. (10 mm) diam by min 1-1/4 in. (32 mm) long steel masonry anchors in conjunction with min 1-1/4 in. (32 mm) diam steel washers spaced a max 1 in. (25 mm) from each end and at the center of each flange.

   B. **Forming Material** – Nom 4 in. (102 mm) wide strips of min 1/2 in (13 mm) thick compressible mat. Mat to be tightly rolled or folded into various shapes, compressed min 50 percent in thickness and installed edge-first into the annular space to a min 10.7 in. (272 mm) depth. There shall be no voids between shapes and the joints between shapes shall be staggered between layers. The layers of forming material shall be installed such that the depth of the forming material is recessed 1 in. (25 mm) from the outer surface of the metal enclosure and extends into the PVC sleeve a min of 1.7 in. (43 mm).

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Fire Barrier Packing Material

   C. **Fill, Void or Cavity Materials** – **Caulk** – Min 1 in. (25 mm) thickness of caulk applied within the annulus, flush with outer surface of the metal enclosure.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – CP 25WB+

System No. W-L-3001  
September 07, 2004  
(Formerly System No. 149)

**F Ratings** – 1 and 2 Hr (See Item 1)  
**T Ratings** – 3/4, 1, 1-1/2 and 2 Hr (See Item 2)  
**L Rating At Ambient** – 15 CFM/sq ft (See Item 3)  
**L Rating At 400 F** – less than 1 CFM/sq ft (See Item 3)

---

**1. Wall Assembly** – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in OC.

B. **Gypsum Board** – Nom 1/2 or 5/8 in. thick, 4 ft wide with square or tapered edges. The gypsum wallboard type, thickness, number of layers and sheet orientation shall be as specified in the individual Wall or Partition Design. Diam of circular through opening to be 3/8 in. to 5/8 in. larger than outside diam of cable or cable bundle.

C. **Fasteners** – When wood stud framing is employed gypsum wallboard layers attached to studs with cement coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design.

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

---

**2. Cables** – Individual cable or max 1 in. diam cable bundle installed in through opening with an annular space of min 0 in. (point contact) to max 3/4 in. Cable to be rigidly supported on both sides of wall assembly. The following types and sizes of cables may be used:

A. Max 150 pair No. 24 AWG copper conductor telephone cable with polyvinyl chloride (PVC) insulation and jacket materials. When max 25 pair telephone cable is used, T Rating is 2 hr. When 50 to 150 pair telephone cable is used in 1 hr fire rated wall, T Rating is 3/4 hr. When 50 to 150 pair telephone cable is used in 2 hr fire rated wall, T Rating is 1 hr.

B. Max No. 10 AWG multiple copper conductor Type NM ("Romex") nonmetallic sheathed cable with PVC insulation and jacket materials. When Type NM cable is used, max T Rating is 1-1/2 hr.

C. Multiple fiber optical communication cable jacketed with PVC and having a max outside diam of 5/8 in. When fiber optic cable is used, max T Rating is 2 hr.

D. Max 12 AWG multi conductor (max seven conductors) power/control cable with cross-linked polyethylene (XLPE) insulation and XLPE or PVC jacket materials. When multi conductor power/control cable is used, max T Rating is 2 hr.

E. Max four conductor with ground No. 2 AWG (or smaller) aluminum SER cables with polyvinyl chloride insulation and jacket materials.

---

**3. Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Caulk or putty fill material installed to completely fill annular space between cable and gypsum wallboard on both sides of wall and with a min 1/4 in. diam bead of caulking or putty applied to perimeter of cable(s) at its egress from each side of the wall.

3M COMPANY – MP+ Stix putty, CP 25WB+ caulk, FB-3000 WT sealant or Cable Wrap putty  
(Note: L Ratings apply only when CP 25WB+ caulk or FB-3000 WT is used.)

1. **Wall Assembly** – The fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum wallboard, as specified in the individual Wall and Partition Design. Max diam of opening is 6 in. (406 mm).

2. **Cables** – Max five 7/C No. 12 AWG cables having polyvinyl chloride (PVC) or cross-linked polyethylene insulation with PVC jacket. Min separation between cables and between cables and periphery of opening shall be 1/2 in. (13 mm). Cables to be rigidly supported on both sides of wall assembly.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Packing Material** – Min 3 in. (76 mm) thickness of min 4.0 pcf (64 kg/m²) mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material** – Sealant – Min 1 in. (25 mm) thickness of fill material applied within the annulus on both surfaces of wall. Additional fill material to be installed such that a min 1/4 in. (6 mm) crown is formed around the penetrating item.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   B. **Gypsum Board** – Nom 5/8 in. thick, 4 ft. wide with square or tapered edges. The gypsum board type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of openings cut in gypsum board is 2 in.
   C. **Fasteners** – When wood stud framing is employed, gypsum board attached to studs with cement coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum board attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design.

2. **Through Penetrating Product** – Max one armored cable or metal clad cable to be installed near center of circular opening in gypsum board. Through penetrating product to be rigidly supported on both sides of wall assembly. The following types of Through-Penetrating Products may be used:
   A. Max four copper conductors No. 2/0 AWG (or smaller) aluminum or steel Armored Cable# or Metal-Clad Cable+.
   B. Two or more twisted copper conductors No. 6 AWG (or smaller) Power Limited Circuit Cable+ with or without a jacket under a metal armor.
   C. Two or more twisted copper conductors No. 10 AWG (or smaller) Power Limited Fire Alarm Cable+ with or without a jacket under a metal armor.
   D. Two or more twisted copper conductors No. 12 AWG (or smaller) Non Power Limited Fire Alarm Cable+ with or without a jacket under a metal armor.

3. **Fill, Void or Cavity Material** – Caulk – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill opening in gypsum board on each side of the wall assembly. A min 5/8 in. thickness of caulk is required for the 1 hr F Rating. A min 1-1/4 in. thickness of caulk is required for the 2 hr F Rating.

---

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 in. by 4 in. (51 mm by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Nom 5/8 in. (16 mm) thick, 4 ft. (122 cm) wide with square or tapered edges. The gypsum board type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Diam of circular cutout in gypsum board layers on each side of wall to be 1/2 in. to 3/4 in. (13 mm to 19 mm) larger than diam of tight cable bundle (Item 2). Max diam of cutouts is 4-1/2 in. (114 mm).

The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hr when installed in a 2 hr fire rated wall.

2. **Cables** – Max 4 in. (102 mm) diam tight bundle of cables centered in circular cutouts in gypsum board and rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of copper conductor cables may be used:
   A. Max 350 kcmil single-conductor power cables; cross-linked polyethylene (XLPE) or polyvinyl chloride (PVC) insulation.
   B. Max 7/C No. 12 AWG cables; PVC insulation and jacket.
   C. Max 3/C No. 2/0 AWG multi conductor power and control cables; XLPE or PVC insulation, XLPE or (PVC) jacket.
   D. Max 200 pair No. 24 AWG telecommunication cables; PVC insulation and jacket.
   E. Max 6/94 Fiber Optic (F.O.) cable; PVC insulation and jacket.

3. **Fill, Void or Cavity Material** – **Wrap Strip** – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in nom 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly-wrapped around cable bundle (foil side out) with seam butted. Wrap strip layer securely bound with steel wire tie and slid into annular space approx 1-1/4 in. (32 mm) such that approx 3/4 in. (19 mm) of the wrap strip width protrudes from the wall surface on each side of the assembly.

4. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to the wrap strip/wall interface and to the exposed edge of the wrap strip approximate 3/4 in. (19 mm) from the wall surface on each side of wall assembly. Caulk or putty to be forced into the interstices of the cable bundle to the max extent possible within the confines of the wrap strip on each side of the wall assembly.

3M COMPANY – CP 25WB+, IC 15WB+, FireDam 150+ caulk, FB-3000 WT sealant or MP+ Stix putty
(Note: L Ratings apply only when CP 25WB+ caulk or FB-3000 WT is used.)

*Bearing the UL Classification Marking*
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-1/2 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   B. **Gypsum Board** – 5/8 in. thick, 4 ft wide with square or tapered edges. The gypsum wallboard type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 4 in.

   The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hr when installed in a 2 hr fire rated wall.

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. thick (28 gauge) galv sheet steel and having a min 2 in. lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall plus approx 7/8 to 1 in. such that, when installed, the ends of the sleeve will project approx 7/16 to 1/2 in. beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the max 4 in. diam through openings, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard layers.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be min 10 percent to max 40 percent of the cross-sectional area of the sleeved opening in wall. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:
   A. Max 150 pair No. 24 AWG copper conductor telecommunication cables; PVC insulation and jacket materials. **When multi conductor telecommunication cable is used, T Rating is 1/2 hr.**
   B. Max 12 AWG multi conductor Type TC copper power and control cables; Type XHHW conductors (XLP insulation) with XLP or PVC jacket. **When max 12 AWG multi conductor cables are used, T Rating is 1 hr.**
   C. Multiple fiber optical communication cable jacketed with PVC and having a max outside diam of 5/8 in. **When fiber optic cable is used, T Rating is 1-1/2 hr.**

4. **Fill, Void or Cavity Materials** – **Putty** – Min 1 in. thickness of moldable putty packed tightly into annular space between cables and sheet steel sleeve (and interstices between cables, if possible), flush with each end of steel sleeve. A nom 1/4 in. diam continuous “rope” or putty shall be applied around the circumference of the steel sleeve at its egress from the gypsum wallboard layers on both sides of the wall assembly.

   **3M COMPANY** – MP+ Stix, Cable Wrap putty

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-1/2 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.

   B. **Gypsum Board** – 5/8 in. thick, 4ft wide with square or tapered edges. The gypsum wallboard type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6 in.

   The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hr when installed in a 2 hr fire rated wall.

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. thick (28 gauge) galv sheet steel and having a min 2 in. lap along the longitudinal seam. Length of steel sleeve to be equal to thickness of wall plus approx 7/8 to 1 in. such that, when installed, the ends of the sleeve will project approx 7/16 to 1/2 in. beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to diam smaller than the max 6 in. diam through openings, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard layers.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be min 8 percent to max 36 percent of the cross-sectional area of the sleeved opening in wall. Cables to be rigidly supported on both sides of wall assembly. The space between cables and periphery of opening shall be min 1/4 in. to max 2-1/2 in. Min separation between Armored Cables and/or Metal-Clad Cables (Item 3F) and between Armored Cables and/or Metal-Clad Cables and all other types of cables shall be 1/4 in. Any combination of the following types and sizes of copper conductor cable may be used:

   A. Max 350 kcmil single conductor power cables; cross-linked polyethylene (XLPE) insulation.
   B. Max 200 pair No. 2/0 AWG conductor telecommunication cables; polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 2/0 AWG multi conductor power and control cables; XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/0 AWG cables; PVC insulation and jacket.
   E. Max 6/94 Fiber Optic (F.O.) cable; PVC insulation and jacket.
   F. Max four copper conductor No. 2/0 AWG (or smaller) aluminum or steel Armored Cable or Metal-Clad Cable Classified as a Through Penetrating Product. The T Rating is 0 Hr when armored cables or metal-clad cables are used.

   See Through Penetrating Product* (XHLY) Category in the Fire Resistance Directory for names of manufacturers. Any aluminum or steel Armored Cable or Metal-Clad Cable Classified as a Through Penetrating Product meeting the above specifications may be used.

4. **Packing Material** – Min 1 in. thickness of mineral wool batt insulation firmly packed into steel sleeve on both sides of the wall assembly as permanent forms. Packing material to be recessed min 1 in. from end of steel sleeve (min 1/2 in. from surface of gypsum wallboard) on both sides of wall assembly.

5. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 1 in. thickness of fill material applied within the annulus, flush with both ends of the steel sleeve. A nom 1/4 in. diam continuous bead of caulk shall be applied around the circumference of the steel sleeve at its egress from the gypsum wallboard layers on both sides of the wall assembly.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant

   *Bearing the UL Classification Marking

1. **Wall Assembly** – The fire-rated gypsum board/stud wall assembly shall be constructed of the material and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs and steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. 406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Two layers of nom 5/8 in. (19 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Diam of circular through opening cut through both layers of gypsum board on each side of wall assembly shall be min 1-1/2 in. (38 mm) to max 2-1/2 in. (64 mm) larger than the diam of each through penetrating product (Item 2) installed in through opening.

2. **Through Penetrating Product** – Max four aluminum conductors 1000 kcmil (or smaller) **Metal Clad Cable** (jacketed or unjacketed).
   
   Max one metal clad cable to be installed within the circular opening in gypsum wallboard layers. The annular space between the cable and the periphery of the opening shall range from min 1-1/2 to max 2-1/2 in. (38 to 64 mm). Through penetration product to be rigidly supported on both sides of wall assembly.

   **GENERAL CABLE INDUSTRIES INC** – Stabiloy MC Cable

   The T, FT and FTH Rating for the firestop system is ½ hr except that for cable sizes greater than 750 kcmil, the T, FT and FTH Rating is 0 hr.

3. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Forming Material** – Min 3 in. (76 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation having a min density of 4 pcf (64 kg/m³) firmly packed into the opening as a permanent form. Packing material to be recessed from both surface of wall as required to accommodate the required thickness of fill material.
   
   B. **Fill, Void or Cavity Material** – Sealant – Nom 1 in. (25 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall.

   *Bearing the UL Classification Mark

System No. W-L-3062
August 18, 2011
F Rating – 1 and 2 Hr (See Item 5)
T Rating – 3/4 Hr
L Rating At Ambient – less than 1 CFM per sq ft
L Rating At 400 F – less than 1 CFM per sq ft

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – Nom 5/8 in. thick, 4 ft wide with square or tapered edges. The gypsum board type, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of opening in gypsum board is 4 in.

2. **Steel Sleeve** – Cylindrical sleeve fabricated from min 0.019 in. thick (No. 28 gauge) galv sheet steel and having a min 2 in. lap along the longitudinal seam. Length of sleeve to be equal to thickness of wall plus 1 in. such that, when installed, the ends of the sleeve will project approx 1/2 in. beyond each surface of the wall on both sides of the wall assembly. The diam of the openings cut in the gypsum board on each side of the wall assembly to be max 2-1/2 in. larger than outside diam of penetrant. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum board.

3. **Through Penetrating Product** – Max one through-penetrating product per sleeved opening. Min annular space between cable and edge of through opening is zero in. (point contact). Through penetrating product to be rigidly supported on both sides of wall assembly. The following types of through-penetrating products may be used:
   A. Max four copper conductors No. 2/0 AWG (or smaller) aluminum or steel Armored Cable or Metal-Clad Cable.
   B. Two or more twisted copper conductor No. 6 AWG (or smaller) Power Limited Circuit Cable with or without a jacket under a metal armor.
   C. Two or more twisted copper conductor No. 10 AWG (or smaller) Power Limited Fire Alarm Cable with or without a jacket under a metal armor.
   D. Two or more twisted copper conductor No. 12 AWG (or smaller) Non Power Limited Fire Alarm Cable with or without a jacket under a metal armor.

4. **Packing Material** – Polyethylene backer rod or min 1 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1/2 in. from board surface on both sides of wall.

5. **Fill, Void or Cavity Material** – Caulk – Applied to fill the annular space around the flexible metal conduit. A min 1 in. depth of fill material to be installed flush with edge of sleeve on both sides of wall assembly. A min 1/2 in. diam bead of caulk shall be applied to the steel sleeve/board interface around the entire perimeter of the sleeve on each side of the wall. A bead of caulk shall also be applied between the cable and the steel sleeve at the point contact location on both sides of wall. The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hr when installed in a 2 hr fire rated wall.

#Bearing the UL Listing Mark
*Bearing the UL Classification Mark
1. **Wall Assembly** – The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design.

2. **Cables** – Aggregate cross-sectional area of cables in Split Sleeve to be min 8 percent to max 36 percent of the aggregate cross-sectional area of the Split Sleeve. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of copper conductor cable may be used:
   A. Max 350 kcmil single conductor Type XHHW power cables; cross-linked polyethylene (XLPE) insulation.
   B. Max 150 pair No. 24 AWG conductor telecommunication cables; polyvinyl chloride (PVC) insulation and jacket materials.
   C. Max No. 12 AWG multiconductor Type TC power and control cables; Type XHHW conductors XLPE insulation with XLPE or PVC jacket.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Firestop Device** – Threaded steel sleeve halves incorporating split nuts and split washers sized to fit the specific diam of the opening. Device shall be installed around cables in accordance with the accompanying installation instructions. Device provided in nom 1, 2 and 4 in. sizes. Max diam of opening in wall for 1, 2 and 4 in. size devices are 1-1/4, 2-7/16 and 4-1/2 in., respectively.
   B. **Packing Material** – Min 1 in. thickness of min 4.0 pcf mineral wool batt insulation firmly packed into Split Sleeve as a permanent form. Packing material to be recessed from each end of Split Sleeve as required to accommodate the required thickness of fill material.
   C. **Fill, Void or Cavity Material** – Caulk, Sealant or Putty – Min 1 in. thickness of fill material applied within the Split Sleeve, flush with both ends.

L Rating at 400 F – less than 1 CFM per sq ft

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.

   B. **Gypsum Board** – Nom 5/8 in. thick, 4 ft. wide with square or tapered edges. The gypsum wallboard type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of openings cut in gypsum wallboard is 2 in.

   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design.

   Diam of circular through opening cut through gypsum wallboard on each side of wall assembly to be min 1/4 in. to max 11/16 in. larger than diam of through penetrating product (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. from nearest stud in wall cavity.

2. **Through Penetrating Product** – Max four copper conductor No. 2 AWG (or smaller) aluminum Metal-Clad Cable+. Max one metal clad cable to be installed near center of circular opening in gypsum wallboard. Through penetrating product to be rigidly supported on both sides of wall assembly. When installed in 1 hr fire rated wall assembly, T Rating is 0 hr. When installed in 2 hr fire rated wall assembly, T Rating is 3/4 hr when max No. 2 AWG cable is used and 2 hr when max 12 AWG cable is used.

3. **Fill, Void or Cavity Material** – Caulk – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill opening in gypsum wallboard on each side of the wall assembly. A min 5/8 in. thickness of caulk is required for the 1 hr F Rating. A min 1-1/4 in. thickness of caulk is required for the 2 hr F Rating.

1. Wall Assembly – The 1 or 2 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. Studs – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.

   B. Gypsum Board* – Nom 5/8 in. thick, 4 ft wide with square or tapered edges. The gypsum wallboard type, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of opening in gypsum wallboard is 4 in.

2. Steel Sleeve – Cylindrical sleeve fabricated from min 0.019 in. thick (No. 28 gauge) galv sheet steel and having a min 2 in. lap along the longitudinal seam. Length of sleeve to be equal to thickness of wall plus 1 in. such that, when installed, the ends of the sleeve will project approx 1/2 in. beyond each surface of the wall on both sides of the wall assembly. The diam of the openings cut in the gypsum wallboard on each side of the wall assembly to be max 2-1/2 in. larger than outside diam of flexible metal conduit. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard.

3. Through Penetrating Product* – Max four copper conductor No. 2/0 AWG (or smaller) aluminum Metal-Clad Cable#. Max one cable per sleeved opening. Min annular space between cable and edge of through opening is zero in. (point contact). Through penetrating product to be rigidly supported on both sides of wall assembly.

   NEXANS CANADA INC

4. Packing Material – Polyethylene backer rod or min 1 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed min 1/2 in. from wallboard surface on both sides of wall.

5. Fill, Void or Cavity Material* – Caulk – Applied to fill the annular space around the flexible metal conduit. A min 1 in. depth of fill material is to be installed flush with edge of sleeve on both sides of wall assembly. A min 1/2 in. diam bead of caulk shall be applied to the steel sleeve/wallboard interface around the entire perimeter of the sleeve on each side of the wall. A bead of caulk shall also be applied between the cable and the steel sleeve at the point contact location on both sides of wall. The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hr when installed in a 2 hr fire rated wall.

F Rating – 1 and 2 Hr (See Item 3)
T Ratings – 0, 3/4 and 2 Hr (See Item 2)
L Rating at Ambient – less than 1 CFM per sq ft. (See Item 3)
L Rating at 400 F – less than 1 CFM per sq ft. (See Item 3)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   
   B. **Gypsum Board** – Nom 5/8 in. thick, 4 ft. wide with square or tapered edges. The gypsum wallboard type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of openings cut in gypsum wallboard is 2 in.
   
   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design. Diam of circular through opening cut through gypsum wallboard on each side of wall assembly to be min 1/4 in. to max 11/16 in. larger than diam of through penetrating product (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. from nearest stud in wall cavity.

2. **Through Penetrating Product** – Max four copper conductor No. 2 AWG (or smaller) aluminum or steel Armored Cable+ or Metal-Clad Cable+. Max one armored cable or metal clad cable to be installed near center of circular opening in gypsum wallboard. Through penetrating product to be rigidly supported on both sides of wall assembly. When installed in 1 hr fire rated wall assembly, T Rating is 0 hr. When installed in 2 hr fire rated wall assembly, T Rating is 3/4 hr when max No. 2 AWG cable is used and 2 hr when max 12 AWG cable is used.

   **CONDUCTORS CM S A DE C V**

3. **Fill, Void or Cavity Material** – **Caulk** – Caulk fill material forced into annular space around entire circumference of through penetrating product to be filled opening in gypsum wallboard on each side of the wall assembly. A min 5/8 in. thickness of caulk is required for the 1 hr F Rating. A min 1-1/4 in. thickness of caulk is required for the 2 hr F Rating.

1. **Wall Assembly** – The 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of steel channel studs to be min 3-1/2 in. wide and spaced max 24 in. OC. Additional 3-1/2 in. wide steel studs shall be used to completely frame opening.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max size of opening to be 12-1/2 in. wide by 6 in. high.

2. **Through Penetrating Products** – **Metallic Sleeve** – Nom 12 in. by 5 in. (or smaller) by 20 in. long steel sleeve to be installed either concentrically or eccentrically within the firestop system from either side of wall. An annular space of min 0 in. (point contact) to max 1 in. is required within the firestop system. Sleeve is provided with a steel flange with the overall dimensions of 18-1/4 in. wide by 11-1/4 in. high, welded to the sleeve at each corner. Additionally, fasteners are used to secure the flange to the sleeve along the top and bottom of sleeve by means of 1/2 in. long No. 10 (or larger) TEK screws spaced 5 in. OC max. Sleeve is provided with a flanged steel cover plate with the overall dimensions of 18-1/4 in. wide by 11-1/4 in. high. Cover plate to be surface mounted on opposite side of wall and secured to the sleeve by means of No. 10 (or larger) TEK screws spaced a max of 1 in. from each corner of sleeve on all four sides. Additional No. 10 (or larger) TEK screws are used to secure the cover plate to the sleeve along the top and bottom of sleeve, 5 in. OC max. The flanges for the sleeve and cover plate are secured through the wallboard to the studs framing the opening by means of 2 -1/2 in. long Type S self-tapping steel screws at all four corners of the sleeve and cover plate.

3. **Cables** – Aggregate cross-sectional area of cables in sleeve to be max 50.4 percent of the cross-sectional area inside the sleeve. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of copper conductor cable may be used:
   A. Max 600 kcmil single conductor power cables; cross-linked polyethylene (XLPE) or polyvinyl chloride (PVC) insulation.
   B. Max 900 pair No. 24 AWG conductor telecommunication cables: polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG multiconductor power and control cables; XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/O AWG cables; PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (F.O.) cable; PVC insulation and jacket.
   F. Max No. 18 AWG RG 6/U coaxial cable; XLPE or PVC insulation and jacket.

4. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Material** – **Caulk, Sealant or Putty** – Min 1-1/4 in. thickness of fill material applied around perimeter of cables and within the interstices between cables, recessed approximately 1/4 in. in both ends of sleeve. Fill material to extend a min of 1/4 in. above cables. Min 1/4 in. crown of fill material applied at the point contact location between cables and sleeve and between cables and intumescent sheet (Item 3 B), on both sides of wall assembly. An additional 1/4 in. thickness of fill material to be used to plug cable tray mounting holes on sides of sleeve when a cable tray is not attached to the sleeve.
   B. **Fill, Void or Cavity Material** – **Intumescent Sheet** – Rigid foil-faced sheet with galv steel sheet backer. Sheet cut to fit tightly into end of sleeve on both sides of wall, flush with the ends of the sleeves, filling the annular space between the top of the cables and the sleeve with galv steel sheet facing outward. Bottom of sheet to be cut to follow the contour of the cables with a max 1/4 in. space between the sheet and the cables. Sheet secured to top of sleeve with a min of three 24 gauge (or larger), min 1 in. wide steel angles. The length of the angle leg secured to top of sleeve is 2 in. min. The length of the angle leg secured to the intumescent sheet is not less than 1 in. shorter than the height of the sheet. The angles are located a max of 1 i. from each side of the sleeve and at the center of the sleeve. The angles are secured to sleeve with a min of one 1/2 in. long No. 10 (or larger) TEK screw. The angles are secured to sheet with a min of one 1/2 in. long No. 10 (or larger) TEK screw for angle legs longer than 2 in.

1. **Wall Assembly** – The 1 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – One layer of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design.

2. **Cables** – Aggregate cross-sectional area of cables in Smooth Sleeve to be min 8 percent to max 36 percent of the aggregate cross-sectional area of the Smooth Sleeve. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of copper conductor cable may be used:
   A. Max 350 kcmil single conductor Type XHHW power cables; cross-linked polyethylene (XLPE) insulation.
   B. Max 150 pair No. 24 AWG conductor telecommunication cables; polyvinyl chloride (PVC) insulation and jacket materials.
   C. Max No. 12 AWG multiconductor Type TC power and control cables; Type XHHW conductors XLPE insulation with XLPE or PVC jacket.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Firestop Device** – Smooth steel sleeve device incorporating flat washers secured by sliding compression couplers. Device shall be installed in accordance with the accompanying installation instructions. Device provided in nom 1, 2 and 4 in. sizes. Max diam of opening in wall for 1, 2 and 4 in. size devices are 1-1/8, 2-1/4 and 4-1/2 in., respectively.
   B. **Packing Material** – Min 1 in. thickness of min 4.0 pcf mineral wool batt insulation firmly packed into Smooth Sleeve as a permanent form. Packing material to be recessed from each end of Smooth Sleeve as required to accommodate the required thickness of fill material.
   C. **Fill, Void or Cavity Material** – Caulk, Sealant or Putty – Min 1 in. thickness of fill material applied within the Smooth Sleeve, flush with both ends.

*In the Firestop System, the Fill material should be applied as per the installation instructions.

1. **Wall Assembly** – The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board** – Two layers of nom 5/8 in. thick gypsum wallboard, as specified in the individual Wall and Partition Design.

2. **Cables** – Aggregate cross-sectional area of cables in Threaded Sleeve to be min 8 percent to max 36 percent of the aggregate cross-sectional area of the Threaded Sleeve. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of copper conductor cable may be used:
   A. Max 350 kcmil single conductor Type XHHW power cables; cross-linked polyethylene (XLPE) insulation.
   B. Max 150 pair No. 24 AWG conductor telecommunication cables; polyvinyl chloride (PVC) insulation and jacket materials.
   C. Max No. 12 AWG multiconductor Type TC power and control cables; Type XHHW conductors XLPE insulation with XLPE or PVC jacket.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Firestop Device** – Threaded steel sleeve device incorporating flat washers secured by threaded couplings. Device shall be installed in accordance with the accompanying installation instructions. Device provided in nom 1, 2 and 4 in. sizes. Max diam of opening in wall for 1, 2, and 4 in. size devices are 1-5/16, 2-3/8 and 4-1/2 in., respectively.
   B. **Packing Material** – Min 1 in. thickness of min 4.0 pcf mineral wool batt insulation firmly packed into Threaded Sleeve as a permanent form. Packing material to be recessed from each end of Threaded Sleeve as required to accommodate the required thickness of fill material.
   C. **Fill, Void or Cavity Material** – Caulk, Sealant or Putty – Min 1 in. thickness of fill materials applied within the Threaded Sleeve, flush with both ends.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nominal 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be minimum 3-1/2 in. wide and spaced maximum 24 in. OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Maximum diameter of opening is 4-1/2 in.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cables** – Maximum 4 in. diameter tight bundle of cables installed eccentrically or concentrically in opening. The annular space between the bundled cables and the periphery of the opening to be minimum 0 in. (point contact) to a maximum 1/2 in. Cables may or may not be routed through flexible steel conduit with or without vinyl coating. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cables may be used:

   A. Max 150 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   B. Max 1/C 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   F. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.
   G. **Through Penetrating Product** – Max 3/C No. 2 AWG (or smaller) aluminum or steel clad **Armored Cable** or aluminum or steel clad **Metal Clad Cable** with copper conductors.

   ALFLEX CORP

3. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 5/8 in. thickness of fill material applied within annulus, flush with each surface of wall. Min 5/8 in. thickness of fill material applied into interstices of cables on both sides of wall.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC with nom 2 by 4 in. lumber end plates and cross braces. Steel studs to be min 3-5/8 in. wide by 1-3/8 in. deep channels spaced max 24 in. OC.
   
   B. **Gypsum Board** – Nom 5/8 in. thick, 4 ft wide with square or tapered edges. The gypsum wallboard type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of openings cut in gypsum wallboard is 2 in.
   
   C. **Fasteners** – When wood stud framing is employed, gypsum wallboard attached to studs with cement-coated nails as specified in the individual Wall or Partition Design. When steel channel stud framing is employed, gypsum wallboard attached to studs with Type S self-drilling, self-tapping bugle-head steel screws as specified in the individual Wall or Partition Design.
   
   Diam of circular through opening cut through gypsum wallboard on each side of wall assembly to be min 1/4 in. to max 11/16 in. larger than diam of through penetrating product (Item 2) installed in through opening. Side edge of circular opening to be min 3 in. from nearest stud in wall cavity.

2. **Through Penetrating Product** – Max four copper conductor No. 5 AWG (or smaller) aluminum or steel **Metal-Clad Cable**. Max one metal-clad cable to be installed near center of circular opening in gypsum wallboard. Through penetrating product to be rigidly supported on both sides of wall assembly. When installed in 1 hr fire rated wall assembly, T Rating is 0 hr. When installed in 2 hr fire rated wall assembly, T Rating is 3/4 hr when max No. 5 AWG cable is used and 2 hr when max 12 AWG cable is used.

3. **Fill, Void or Cavity Material** – Caulk – Caulk fill material forced into annular space around entire circumference of through penetrating product to completely fill opening in gypsum wallboard on each side of the wall assembly. A min 5/8 in. thickness of caulk is required for the 1 hr F Rating. A min 1-1/4 in. thickness of caulk is required for the 2 hr F Rating.

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 4-1/2 in. (114 mm).

   The hourly F Rating of the firestop is equal to the hourly fire rating of the wall assembly in which it is installed. The T Ratings are 0 and 1/2 hr when installed in 1 and 2 hr rated walls, respectively.

2. **Cables** – Max 4 in. (102 mm) diam tight bundle of cables to be installed either concentrically or eccentrically within the opening. The annular space between the cable bundle and the periphery of the opening to be min 0 in. (point contact) to max 1/2 in. (0 mm to max 13 mm) Any combination of the following types and sizes of cables may be used:
   
   A. Max 150 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   
   B. Max 1/C 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   
   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   
   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.
   
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   
   F. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.
   
   G. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   
   H. Max 3/C No. 2/0 (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TEK cable.

3. **Fill, Void or Cavity Materials** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with each surface of wall. Min 5/8 in. (16 mm) thickness of fill material applied into interstices of cables on both sides of wall. Min 1/2 in. (13 mm) diam bead of caulk applied at the cable/wallboard interface to the point contact location on both sides of wall.

   **3M COMPANY** – FireDam 150+, CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max diam of opening is 2 in. (51 mm).

   The hourly F Rating of the firestop is equal to the hourly fire rating of the wall assembly in which it is installed. The T Ratings are 0 and 1/2 hr when installed in 1 and 2 hr rated walls, respectively.

2. **Cables** – Individual cable or max 1 in. (25 mm) diam cable bundle installed in through opening with an annular space of min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Cables to be rigidly supported on both sides of wall assembly. Any of the following type and size of cables may be used:
   A. Max 150 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   B. Max 1-10/125 Fiber Optic (F.O.) cable, PVC insulation and jacket.
   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   D. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   E. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.
   F. Max 3/C No. 2/0 aluminum or copper SER cable with PVC insulation and jacket.
   G. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TEK cable.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with both surfaces of the wall. Min 1/2 in. (13 mm) diam bead of caulk applied at the cable/wallboard interface at point contact location on both sides of wall.

System No. W-L-3194
May 19, 2005
F Ratings – 1 & 2 Hr (See Item 1)
T Ratings – 0 & 1/2 Hr (See Item 1)

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 2-1/2 in. (64 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 1/2 Hr for 1 and 2 Hr rated assemblies, respectively.

2. **Cable** – One cable installed eccentrically or concentrically within opening. Annular space between cable and periphery of opening to be min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Cable to be rigidly supported on both sides of the wall. The following types and sizes of cable may be used:

   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) or PVC jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/0 AWG (or smaller) copper or aluminum conductor SER cables with XLPE or PVC insulation and jacket.
   E. Max 4/C No. 2/0 AWG (or smaller) copper conductor, aluminum clad or steel clad TECK 90 cable with or without PVC jacketed.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. Max RG/U coaxial cable with fluorinated ethylene insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. **Through Penetrating Product** – Any cables, **Armored Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category.

3. **Fill, Void or Cavity Material** – Caulk or Sealant – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/cable interface at point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of opening is 5 in. (127 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating is 0 and 1/2 Hr for 1 and 2 Hr fire rated assemblies, respectively.

2. **Steel Sleeve** – (Optional) - Cylindrical sleeve fabricated from min 0.018 in. (0.46 mm) thick (No. 28 gauge) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Length of sleeve to be equal to or max 2 in. (51 mm) greater than the thickness of wall. Ends of sleeve to be flush with or extend a max 1 in. (25 mm) beyond each surface of wall.

3. **Cable** – Max 4 in. (102 mm) diam cable bundle installed eccentrically or concentrically within opening. Annular space between cable bundle and periphery of opening or sleeve to be min 0 in. (0 mm, point contact) to max 1 in. (25 mm). Cable bundle to be rigidly supported on both sides of wall. The following types and sizes of cables may be used:

   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.

   B. Max 1/C No. 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) or PVC jacket.

   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.

   D. Max 3/C No. 4/0 AWG (or smaller) copper conductor, aluminum clad or steel clad TECK 90 cable with or without PVC jacketed.

   E. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.

   F. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.

   G. Max 1/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.

   H. Max RG/U coaxial cable with fluorinated ethylene insulation and jacket.

   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.

   J. **Through Penetrating Product** – Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category.

4. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/cable bundle interface at point contact location on both sides of wall.

   **3M COMPANY** – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

1. **Wall Assembly** – The 1, 2, 3 or 4 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 98.5 in.² (635 cm²) with a max dimension of 12-1/8 in. (308 mm) for square devices. Max diam of opening is 2-1/4 in. (57 mm) for nom 2 in. (51 mm) round devices and 4-1/4 in. (108 mm) for 4 in. (102 mm) round devices.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cables** – Within the loading area of each firestop device module the cables may represent a 0 to 100 percent visual fill. Cable bundles to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cables may be used:

   A. Max 2/C No. 18 AWG copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   
   B. Max 4 pair No. 24 AWG copper conductor Cat5e or Cat 6 telephone cable with PVC insulation and jacket materials.
   
   C. Max RG/U (or smaller) coaxial cable with foam high density polyethylene insulation and PVC jacket materials.
   
   D. Max 3/C (with ground) No. 14 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   
   E. Max 1/C No. 8 AWG copper conductor cable with PVC insulation and nylon jacket materials.
   
   F. Max 12 core No. 26 AWG shielded multi cox cable with foam high density polyethylene insulation and PVC jacket.
   
   G. Max 48MM62.5 micron fiber optic cables with having a min FT-6 rating.
   
   H. Max 62.5/125 micron micron fiber optic cables with having a min Riser rating.
   
   I. Max 1/C 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
   
   J. Max three copper conductors (with ground) No. 12 AWG Metal Clad Cable+.
   
   K. Max four copper conductors No. 2 AWG Metal Clad Cable+.
   
   L. Max 1/C 2/0 AWG non halogen copper conductor cable.
   
   M. Max 300 pair No. 24 AWG copper conductor telephone cable with PVC insulation and jacket materials.
   
   N. Max 30 pair No. 22 copper conductor shielded switchboard cable with PVC insulation and jacket materials.
   
   O. Max RG/6 (or smaller) coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket materials.
   
   P. Max RG/U (or smaller) coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket materials.
   
   Q. Max 7/C No. 12 AWG copper conductors with PVC insulation and jacket materials.
   
   R. Max 4 pair No. 23 AWG copper conductor Cat 6 telephone cable with PVC insulation and jacket materials.
   
   S. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+.
   
   T. Max 04-02 2 5M fiber optic cables having a max diameter of 0.450 in. (11.4 mm).
   
   U. Max 1/C No. 750 kcmil copper conductors with PVC insulation and fabric jacket materials.
   
   V. Max 3/C with ground No. 4/0 AWG copper or aluminum conductor SER cable with cross linked polyethylene (XLPE) or PVC insulation and jacket.
3. **Firestop System** – The firestop system shall consist of the following:

A. **Firestop Device** – A max of six square firestop devices may be ganged together for 1 and 2 hr rated assemblies. A max of three square firestop devices may be ganged together for 3 and 4 hr rated assemblies. As an alternate, one round device may be centered within a round opening. Each device consists of a nom 2-1/2 by 2-1/2 by 10 in. (64 by 64 by 254 mm), a nom 4 by 4 by 10 in. (102 by 102 by 254 mm) long, a nom 2 in. (51 mm) diam by 10 in. (254 mm) or a nom 4 in. (102 mm) diam by 10 in. (254 mm) long powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device(s) to be installed within opening with ends projecting an equal distance beyond each surface of wall assembly in accordance with the accompanying installation instructions. The annular space between device(s) and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1/8 in. (3 mm). Firestop device(s) secured in place by means of steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of wall and secured together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the cables and installed flush with each end of device on both sides of wall assembly. The foam plug in one or both ends of the device is optional except when L Rating is required (See Item 3B).

B. **Fill, Void or Cavity Materials** – **Putty or Caulk** – Min 1/8 in. (3 mm) bead of fill material shall be applied at interface of gypsum board and firestop devices immediately prior to the installation of the mounting flanges. If three or less devices (Item 3A) are ganged together, the fill material may be optional. As an option to attain L Ratings, foam plugs of firestop device modules shall be recessed into device to accommodate the required thickness of fill material. When annulus around firestop device module(s) is filled with putty or caulk and when both ends of each firestop device module are filled with a min 1/8 in. (3.2 mm) depth of putty or caulk flush with both ends of the devices, the following L Ratings apply:

<table>
<thead>
<tr>
<th>Max Percent Cable Fill In Device</th>
<th>L Rating At Ambient, CFM/sq ft (CFM/firestop device module)</th>
<th>L Rating At 400 F, CFM/sq ft (CFM/firestop device module)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>4 (Less Than 1)</td>
<td>Less Than 1 (Less Than 1)</td>
</tr>
<tr>
<td>50</td>
<td>7 (1)</td>

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud shaft wall assembly shall be constructed of the materials and in the manner specified in the individual U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall incorporate the following construction features:
   A. **Steel Studs** – “C-H” or “C-T” shaped studs, min 2-1/2 in. (64 mm) wide by 1-1/2 in. (38 mm) deep, fabricated from min No. 25 gauge (0.6 mm thick) galv steel, spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – 1 in. (25 mm) thick, 24 in. (610 mm) wide gypsum liner panels installed vertically. Max diam of circular cutout in gypsum liner panel is 4-1/2 in. (114 mm).
   C. **Gypsum Board** – 1/2 in. or 5/8 in. (13 or 16 mm) thick, 48 in. (1.2 m) wide gypsum boards. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Wall and Partition Design. Max diam of circular cutout in gypsum board is 4-1/2 in. (114 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cables** – Max 4 in. diam tight bundle of cables installed eccentrically or concentrically in opening. The annular space between the bundled cables and the periphery of the opening to be min 0 in. (point contact) to max 1/2 in. (13 mm). Cables may or may not be routed through flexible steel conduit with or without vinyl coating. Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cables may be used:
   A. Max 150 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   B. Max 1/C 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 3/C No. 4/0 AWG (or smaller) aluminum or copper conductor SER cable with XLPE or PVC insulation and jacket.
   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   F. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.
   G. **Through Penetrating Product** – Max 3/C No. 2 AWG (or smaller) aluminum or steel clad Armored Cable* or aluminum or steel clad Metal Clad Cable* with copper conductors.

   *Bearing the UL Classification Mark

ALFLEX CORP

3. **Fill, Void or Cavity Materials** – Caulk or Sealant – Caulk or sealant applied within annulus at a thickness equal to the total thickness of the gypsum board on both sides of the wall. Fill material forced into grouped cable interstices to max extent possible. At the point contact location, a min 1/4 in. (6 mm) diam bead of fill material shall be applied at the cable bundle/sleeve interface

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.
   B. **Gypsum Board*** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 225 sq in. (1452 sq cm) with a max dimension of 22-1/2 in. (572 mm).

The hourly F and FH Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the opening installed either concentrically or eccentrically within the firestop system. The annular space between cable and periphery of opening shall be min 0 in. (0 mm) (point contact) to max 4 in. (102 mm). The horizontal space between cable shall be min 1/4 in. (6 mm) to max 4 in. (102 mm). The vertical space between cable shall be min 1-1/2 in. (38 mm) to max 4 in. (102 mm). Cable to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.

K. **Through Penetrating Product*** – Any cables, **Armored Cable**+ or **Metal Clad Cable**+ currently Classified under the Through Penetrating Product category.

3. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material*** – Caulk, Sealant or Putty – Min 1/2 in. (13 mm) thickness of caulk or putty formed to a min 1 in. (25 mm) width and applied within annulus at all corners of opening and extending a min 1 in. (25 mm) in both directions from each corner, flush with both surfaces of wall. Min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of caulk or putty wrapped applied around each penetrant such that caulk or putty extends approximately 1/2 in. (51 mm) beyond both surfaces of wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of caulk or putty.

3M COMPANY

**3M FIRE PROTECTION PRODUCTS** – MPS-2+ or CP 25 WB+ or FB-3000 WT

B. **Fill Void or Cavity Material*** – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between penetrants and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

3M COMPANY

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of min 3-5/8 in. (92 mm) wide steel channel studs spaced max 24 in. (610 mm) OC.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in the individual U400 or V400 series Wall and Partition Design in the UL Fire Resistance Directory. Max area of opening is 67-1/2 sq. in. (435 sq cm) with max dimension of 22-1/2 in. (572 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the opening installed either concentrically or eccentrically within the firestop system. The annular space between cable and periphery of opening shall be min 0 in. (0 mm, point contact) to max 1-1/4 in. (32 mm). The horizontal space between cable shall be min 1/4 in. (6 mm) to max 1 in. (25 mm). Cable to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product** – Any cables, **Armored Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category.

3. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Min 1/2 in. (13 mm) diam bead of caulk applied to the penetrant/gypsum board interface at the point contact location on both sides of wall.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – CP 25WB+, FireDam 150+, IC 15WB+ caulk or FB-3000 WT sealant

*Bearing the UL Classification Mark*
1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing shall consist of min 3-1/2 in. (89 mm) wide steel channel studs spaced max 24 in. (610 mm) OC. Additional min 3-1/2 in. (89 mm) wide steel studs shall be used to completely frame opening.

   B. **Gypsum Board** – The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U400 or V400 Series Design in the UL Fire Resistance Directory. Max area of opening to be 182 in.² (1174 cm²) with a max dimension of 45-1/2 in. (116 mm). All vertical studs in opening to remain intact.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable** – Aggregate cross-sectional area of cables in opening to be max 49 percent of the cross-sectional area inside the opening installed either concentrically or eccentrically within the firestop system. The annular space between cable and periphery of opening shall be min 0 in. (0 mm) (point contact) to max 2 in. (51 mm). The horizontal space between cable shall be min 1/4 in. (6 mm) to max 2 in. (51 mm). Cable to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cable may be used:

   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   
   C. Max 7/C No. 12 AWG (or smaller) copper conductor cable with control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   
   D. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   
   F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   
   K. **Through Penetrating Product** – Any cables, **Armored Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category.

3. **Firestop System** – The firestop system shall consist of the following:

   A. **Packing Material** – Min 3-3/4 in. (95 mm) or 5 in. (127 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening for 1 and 2 hr rated assemblies, respectively. Packing material to be recessed from both sides of wall assembly to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Material** – **Caulk or Sealant** – Min 1/2 in. (13 mm) thickness of caulk applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall.

F Ratings – 1 and 2 Hr (See Item 1)
T Rating – 0 Hr

1. Wall Assembly – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 2-1/2 in. (64 mm) wide and spaced max 24 in. (610 mm) OC.
   B. Gypsum Board* – 5/8 in. (16 mm) thick, The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6-1/2 in. (165 mm)

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. Steel Sleeve – Nom 6 in. (152 mm) diam (or smaller) steel electrical metallic tubing (EMT) or Schedule 5 steel pipe. The annular space between steel sleeve and periphery of opening shall be min 0 in. (point contact) to max 1/2 in. (13mm) Sleeve may extend up to 18 in. (457 mm) beyond each surface of the wall.

3. Cables – Aggregate cross-sectional area of cables in steel sleeve to be max 50 percent of the aggregate cross-sectional area of the sleeve. Cables to be rigidly supported on both sides of wall assembly. The annular space between cables and periphery of sleeve shall be min 0 in. (point contact) to max 1/2 in. (13mm) The annular space between cables shall be min 0 in. (point contact) to max 1 in. (25mm). Any combination of the following types and sizes of cables may be used:
   A. Max 300 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   B. Max 1-10/125 Fiber Optic (F.O.) cable, PVC insulation and jacket.
   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   F. Max 4 Pair No 22 AWG (or smaller) Cat 6 copper conductor with PVC insulation and jacket.
   G. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   H. Max four aluminum conductor No. 10 AWG (or smaller) aluminum or steel, Armored cable# or Metal-Clad Cable+.

   AFC CABLE SYSTEMS INC – MC Lite

4. Firestop System – The firestop system shall consist of the following:
   A. Packing Material – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into each end of sleeve as a permanent form. Packing material to be recessed from each end of sleeve to accommodate the required thickness of fill material.
   B. Fill, Void or Cavity Material* – Sealant or Putty – Sealant or Putty — Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of wall. At point contact, a min 1/2 in. (13mm) bead of fill material shall be applied at sleeve/wall interface on both sides of wall when sleeve extends beyond surface of wall. Min 1/2 in. (13 mm) thickness of fill material applied within the sleeve, flush with both ends. Min 1/2 in. (13 mm) thickness of fill material applied within the interstices of the cable bundles.

   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – IC 15WB+, CP 25WB+ or FB-3000 WT
C. **Fill, Void or Cavity Material** – (Not Shown) - As an alternate to Item 4B above, min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both sides of the wall. At point contact, a min. 1/2 in. (13 mm) bead of fill material at sleeve/wall interface on both sides of both sides of wall when sleeve extends beyond surface of the wall. Min. 2-1/2 in. (63 mm) thickness of fill material applied within the sleeve, flush with both ends. Foam to be injected into the interstices between all cables. When this fill material is used, item 4A is not required.

**3M COMPANY** – Fire Barrier rated Foam, FIP 1 - Step

1. Wall Assembly – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   B. Gypsum Board* – 5/8 in. (16 mm) thick. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400, V400 or W400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6-1/2 in. (165 mm)

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. Cables – Aggregate cross-sectional area of cables in steel sleeve to be max 48 percent of the aggregate cross-sectional area of the sleeve. The annular space between cables and periphery of sleeve and the annular space between cables shall be min 0 in. (point contact) to max 2 in. (51 mm). Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cables may be used:
   A. Max 400 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   F. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   G. Max No. 18 AWG RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   H. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   I. Max 4 Pair No 22 AWG (or smaller) Cat 6 copper conductor with PVC insulation and jacket.
   J. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   K. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   L. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   M. Through Penetrating Product* – Any cables, Armored Cable+ or Metal Clad Cable+ currently classified under the Through Penetrating Product category.

3. Firestop System – The firestop system shall consist of the following:
   A. Firestop Device* – One firestop device module centered within the opening. The firestop device module consists of a 12 in. (305 mm) long galv steel split sleeve with galv steel flange plates. Firestop device module to be installed in accordance with the accompanying installation instructions. The space between the firestop device module and the periphery of the opening shall be min 0 in. (point contact) to max 1 in. (25 mm). Firestop device module secured in place by means of steel flange plates sized to accommodate the firestop device
System No. W-L-3371 continued

module.. Steel flange plate installed on both sides of wall and secured around firestop device module with steel screws. The steel flange plate is then secured to the wall with the supplied drywall screws. The firestop device module is to be installed with its ends projecting an equal distance beyond each surface of the wall assembly.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – 3M Fire Barrier Putty Sleeve Kit DT 100, DT 200 or DT 400

B. Fill, Void or Cavity Material* – After the installation of the cables (Item 2) the supplied putty material is to be packed into each end of the firestop device with care taken to fill the interstices between the cables. A minimum 1 in. (25mm) depth of the putty material is required at each end of device.

3M COMPANY
3M FIRE PROTECTION PRODUCTS – 3M Fire Barrier MP+ Putty Stix

C. Packing Material – (Not Shown. Required for installation only on DT 400 with cable fill of less than 28 percent. Optional on DT 100 and DT200 assemblies.) – Min 2 in. (51 mm) thickness of min 4 pcf (64 kg/m3) mineral wool batt insulation firmly packed into each end of sleeve (Item 3A) as a permanent form. Packing material to be recessed from each end of sleeve to accommodate the required thickness of fill material.

1. **Wall Assembly** – The 3 or 4 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing shall consist of steel channel studs. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.
   
   B. **Gypsum Board** – 5/8 in. (16 mm) thick. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U400, V400 or W400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 6-1/2 in. (165 mm).

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cables** – Aggregate cross-sectional area of cables in steel sleeve to be max 48 percent of the aggregate cross-sectional area of the sleeve. The annular space between cables and periphery of sleeve and the annular space between cables shall be min 0 in. (0 mm) to max 2 in. (51 mm). Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cables may be used:
   
   A. Max 400 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   
   E. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   
   F. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   
   G. Max No. 18 AWG RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   
   H. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   
   I. Max 4 Pair No 22 AWG (or smaller) Cat 6 copper conductor with PVC insulation and jacket.
   
   J. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   
   K. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   
   L. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   
   M. **Through Penetrating Product** – Any cables, *Armored Cable* or *Metal Clad Cable* currently Classified under the Through Penetrating Product category.

3. **Firestop system** – The firestop system shall consist of the following:
   
   A. **Firestop Device** – One firestop device module centered within the opening. The firestop device module consists of a 12 in. (305 mm) long galv steel split sleeve with galv steel flange plates. Firestop device module to be installed in accordance with the accompanying installation instructions. The space between the firestop device module and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1 in. (25 mm). Firestop device module secured in place by means of steel flange plates sized to accommodate the firestop device module. Steel flange plates installed on both sides of wall and secured around firestop device module with steel screws.
flange plate is then secured to the gypsum board on both sides of the wall assembly with the supplied screws. The firestop device module is to be installed with its ends projecting an equal distance beyond each surface of the wall assembly.

1. Wall Assembly — The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. Studs — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. Gypsum Board* — 5/8 in. (16 mm) thick. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300, U400, V400 or W400 Series Design in the UL Fire Resistance Directory. Diam of opening to be equal to the OD of the steel sleeve (Item 2). Max diam of opening is 6-1/2 in. (165 mm).

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. Steel Sleeve — Nom 6 in. (152 mm) diam (or smaller) steel electrical metallic tubing (EMT) or Schedule 5 (or heavier) steel pipe. The annular space between steel sleeve and periphery of opening shall be min 0 in. (continuous point contact). Sleeve may extend up to 3 in. (76 mm) beyond each surface of the wall.

2A. Alternate Steel Sleeve — (Not Shown) — Cylindrical sleeve fabricated from min 0.019 in. (0.48 mm) thick (28 gauge) galv sheet steel and having a min 2 in. (51 mm) lap along the longitudinal seam. Min length of steel sleeve to be equal to thickness of wall. Max length of sleeve to be such that, when installed, the ends of the sleeve will project not more than 1 in. (25 mm) beyond the surface of the wall on each side of the wall assembly. Sleeve installed by coiling the sheet steel to a diam smaller than the diam opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum wallboard layers.

3. Cables — Aggregate cross-sectional area of cables in steel sleeve to be max 48 percent of the aggregate cross-sectional area of the sleeve. The annular space between cables and periphery of sleeve and the annular space between cables shall be min 0 in. (point contact) to max 2 in. (51 mm). Cables to be rigidly supported on both sides of wall assembly. Any combination of the following types and sizes of cables may be used:

   A. Max 400 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   F. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   G. Max No. 18 AWG RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   H. Max 4 pair No 22 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   I. Max 4 Pair No 22 AWG (or smaller) Cat 6 copper conductor with PVC insulation and jacket.
   J. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor XLPE insulation and jacket.
   K. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.
   L. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.

   M. Through Penetrating Product* — Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category. See Through Penetrating Product (XHLY) category in the Fire Resistance Directory for names of manufacturers.

4. Fill, Void or Cavity Material* — Sealant or Putty — Min 5/8 in. (16 mm) thickness of sealant or min 1 in. (25 mm) thickness of putty applied within the sleeve, flush with both sides of wall. At point contact, a min 1/2 in. (13mm) bead of fill material shall be applied at sleeve/wall interface on both sides of wall when sleeve extends beyond surface of wall. Min 1/2 in. (13 mm) thickness of sealant or a 1/4 in. (6 mm) rope of putty applied point contact locations of the cables/sleeve interface on both sides of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS — IC 15WB+, CP 25WB+, FB-3000 WT or MP+

1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified if the individual U300, U400 or V400 Series Wall and Partition Designs in the Fire Resistance Directory and shall include the following construction features:

A. **Studs** — Wall framing shall consist of either wood studs or channel shaped steel studs. Wood studs to consist of 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide, fabricated from min 25 MSG galvanized steel, spaced max 24 in. (610 mm) OC.

B. **Gypsum Board** — Nom 5/8 in. (16 mm) thick with square or tapered edges. The gypsum board type, number of layers and sheet orientation shall be as specified in the individual Wall and Partition Design Number. Max diam of opening is 2 in. (51 mm) or 4-1/2 in. (114 mm).

The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings of the firestop system are 1/2 hr when installed in 2 hr fire rated walls and 0 hr when installed in 1 hr fire rated walls.

2. **Steel Sleeve** — Cylindrical sleeve fabricated from min 0.016 in. (0.41 mm) thick (No. 28 MSG) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the openings and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers. The ends of the steel sleeve shall be flush with each surface of the wall.

3. **Cables** — Aggregate cross-sectional area of bundled cables in opening to be max 60 percent of the cross-sectional area of the opening. Cables to be tightly bundled together and rigidly supported on both sides of the wall assembly. The annular space between cable bundle and periphery of opening shall be min 1/2 in. (13 mm). Any combination of the following types and sizes of cables may be used:

A. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
B. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) insulation and jacket.
C. Max 3/C No. 3/0 AWG aluminum conductor SER cable with PVC insulation and jacket.
D. Max 7/C No. 12 AWG copper conductor power and control cables with PVC or cross-linked polyethylene (XLPE) insulation and jacket and PVC jacket.
E. 110/125 fiber optic communication cable with PVC insulation and jacket.
F. Max 3/C copper conductor No. 10 AWG (or smaller) with bare aluminum ground, PVC insulated steel or aluminum Metal-Clad cable.

4. **Firestop System** — The firestop system shall consist of the following:

A. **Fill, Void or Cavity Material** — Plug sized for the steel sleeved opening per Table below friction-fitted within the sleeve at each side of wall such that the outer circumference of the dome-shaped plug is flush with both surfaces of the wall. Plug cut to fit around the cable bundle and installed tightly within the opening.

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – One or two layers of nom 5/8 in. (16 mm) thick gypsum board as specified in the individual Wall and Partition Design. Max diam of opening is 3 in. (76 mm).

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly.

2. **Cables** – Max 2 in. (51 mm) diam tight bundle of cables to be installed either concentrically or eccentrically within the opening. The annular space between the cable bundle and the periphery of the opening to be min 0 in. (point contact) to max 1 in. (25 mm). Any combination of the following types and sizes of cables may be used:

   A. Max 150 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.

   B. Max 1/C 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.

   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.

   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.

   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.

   F. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.

   G. Max 3/C No. 2/0 aluminum or copper SE cable with PVC insulation and jacket.

   H. Max 3/C No. 2/0 (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TEK cable.

3. **Fill, Void or Cavity Material** – **Sealant** – Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with surface of wall. Min 1/2 in. (13 mm) diam bead of sealant applied at point contact location.

   **3M COMPANY** – IC 15WB+, CP 25WB+, FB-3000 WT or FD 150+

3M.com/firestop 1-800-328-1687
1. **Floor-Ceiling Assembly** – The 1 or 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the UL Fire Resistance Directory. The 1 hr fire rated assembly shall be constructed as specified in Design No. L501, L512 or L537. The 2 hr fire rated assembly shall be constructed as specified in Design No. L505, L511 or L536. **The F and T Ratings of the firestop system are equal to the fire rating of the floor-ceiling assembly.** The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 1/2 in.

   B. **Wood Joists** – Nom 2 by 10 in. lumber joists spaced 16 in. O.C. with nom 1 by 3 in. lumber bridging and with ends firestopped.

   C. **Furring Channels** (Not Shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) in 2 hr fire rated assembly. Furring channels spaced max 24 in. O.C.

   D. **Gypsum Board** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard (2 hr fire rated assembly only) screw-attached to furring channels. Max diam of opening is 1/2 in.

1.1 **Chase Wall** (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum wallboard chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. or double nom 2 by 4 in. lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. or parallel 2 by 4 in. lumber plates, tightly butted.

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. or two sets of parallel 2 by 4 in. lumber plates, tightly butted. Max diam of opening is 1/2 in.

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Cable** – Max 25 pair No. 24 AWG copper conductor telephone cable or max two-conductor with ground No. 12 or No. 14 AWG Type NM nonmetallic sheath copper conductor cable. Cable insulation and jacket material to be polyvinyl chloride (PVC). Max one cable to be installed in nom 1/2 in. diam opening. Cable to be rigidly supported on both sides of floor assembly.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. or 1-1/4 in. thickness of fill material, for 1 and 2 hr rated assemblies, respectively, applied within the annulus, flush with bottom surface of ceiling or top plate. An additional min 1/4 in. crown of fill material applied to perimeter of penetrant at its egress from the top of flooring and underside of ceiling or from top of sole plate and underside of top plate.

   **3M COMPANY** – CP 25WB+ caulk or FB-3000 WT sealant

1. **Floor-Ceiling Assembly** – The fire rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design No. L505, L511 or L536 in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design.
   B. **Wood Joists** – Nom 2 by 10 in. (51 by 254 mm) lumber joists spaced 16 in. (406 mm) OC. with nom 1 by 3 in. (25 by 76 mm)
   C. **Furring Channels** – (Not shown) – Resilient galv steel furring channels installed perpendicular to wood joists between first and second layers of wallboard (Item 1D) and spaced max 24 in. (610 mm) OC.
   D. **Gypsum Board** – Nom 4 ft (1219 mm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard screw-attached to furring channels. Max diam of ceiling opening is 1 in. (25 mm).

2. **Cable** – One max 25 pair No. 24 AWG telephone cable with polyvinyl chloride (PVC) insulation and jacket. Cable to be rigidly supported on both sides of floor assembly.

3. **Fill, Void or Cavity Material** – **Sealant** – Fill material forced into annular space to fill space to max extent possible. Sealant shall be installed flush with the floor and ceiling.

1. **Floor Assembly** – The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:

   A. **Trusses** – Min 12 in. (305 mm) deep parallel chord trusses fabricated from nom 2 by 4 in. (51 by 102 mm) lumber in conjunction with galv steel truss plates or Structural Wood Members* with bridging as required.
   
   B. **Flooring** – Nom 3/4 in. (19 mm) thick plywood flooring with or without Floor Topping Mixture*. Max diam of opening is 1-1/4 in. (32 mm).
   
   C. **Furring Channels** – Rigid or resilient galv steel furring channels installed perpendicular to bottom chord of trusses.
   
   D. **Gypsum Board** – Nom 4 ft (1.22 m) wide by 5/8 in. (16 mm) thick, screw-attached to furring channels. Max diam of opening is 1-1/4 in. (32 mm).

1.1 **Chase Wall** – (Optional, Not Shown) – The through penetrants (Item No. 2) may be routed through a 1 hr fire-rated single, double or staggered wood stud/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.
   
   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted.
   
   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Max diam of opening is 1-1/2 in. (38 mm).
   
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Cables** – One cable to be installed eccentrically or concentrically in opening with annular space between the cable and the periphery of the opening of min 0 in. (0 mm, point contact) to max 1-1/4 in. (32 mm). Cable to be rigidly supported on both sides of Floor-Ceiling assembly. The following types of cables may be used.

   A. Max seven conductor No. 12 AWG (or smaller) power/control cables with polyvinyl chloride insulation and jacket materials.
   
   B. Max 100 pair No. 22 AWG (or smaller) telecommunication cables with polyvinyl chloride insulation and jacket materials.
   
   C. Max four conductor with ground No. 2/0 AWG (or smaller) aluminum SER cables with polyvinyl chloride insulation and jacket materials.

2A. **Through Penetrating Product** – Max one through-penetrating product to be installed eccentrically or concentrically in opening with annular space between the through-penetrating product and the periphery of the opening of min 0 in. (0 mm, point contact) to max 1-1/4 in. (32 mm). Through-penetrating product to be rigidly supported on both sides of floor or wall assembly. The following types of through-penetrating products may be used:

   A. Max four copper conductors No. 2/0 AWG (or smaller) aluminum or steel Armored Cable# or Metal-Clad Cable+.
   
   B. Two or more twisted copper conductor No. 6 AWG (or smaller) Power Limited Circuit Cable+ with or without a jacket under a metal armor.
   
   C. Two or more twisted copper conductor No. 10 AWG (or smaller) Power Limited Fire Alarm Cable+ with or without a jacket under a metal armor.
   
   D. Two or more twisted copper conductor No. 12 AWG (or smaller) Non Power Limited Fire Alarm Cable+ with or without a jacket under a metal armor.

3. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling or top plate. An additional min 1/4 in. (6 mm) crown of fill material applied to perimeter of penetrant at its egress from the top of flooring and underside of ceiling or from top of sole plate and underside of top plate.

   3M COMPANY – CP 25WB+ caulk, MP+ Stix putty or FB-3000 WT sealant

1. **Floor Assembly** – The 1 hr fire rated wood truss or combination wood and steel truss Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory, as summarized below:

   A. **Trusses** – Min 12 in. (305 mm) deep parallel chord trusses fabricated from nom 2 by 4 in. (51 by 102 mm) lumber in conjunction with galv steel truss plates or Structural Wood Members* with bridging as required.

   B. **Flooring** – Nom 3/4 in. (19 mm) thick plywood flooring with or without Floor Topping Mixture*. Max diam of opening is 3-1/2 in. (89 mm).

   C. **Furring Channels** – Rigid or resilient galv steel furring channels installed perpendicular to bottom chord of trusses.

   D. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick, screw-attached to furring channels.

1.1 **Chase Wall** – (Optional, not shown) – The through penetrants (Item No. 2) may be routed through a 1 hr fire-rated single, double or staggered wood stud/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted.

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted.

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Cables** – Max seven conductor No. 12 AWG (or smaller) power/control cables or max 100 pair No. 22 AWG (or smaller) telecommunication cables or max four conductor with ground No. 4/0 AWG (or smaller) copper or aluminum SER cables with polyvinyl chloride (PVC) or cross-linked polyethylene (XLPE) insulation and jacket materials. Max 3 in. (76 mm) diam tightly bundled cables centered in circular cutouts.

   Circular cutouts to have a diam 1/2 in. to 3/4 in. (13 to 19 mm) larger than diam of cable bundle such that a 1/4 in. to 3/8 in. (6 to 10 mm) annular space is present between the cable bundle and the perimeter of the circular cutout. Cables to be rigidly supported on both sides of Floor-Ceiling assembly.

3. **Firestop System** – The details of the firestop system shall be as follows:

   A. **Fill, Void or Cavity Materials** – Wrap Strip – Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in. (51 mm) wide strips. Nom 2 in. (51 mm) wide strip tightly wrapped around cable bundle (foil side exposed), secured with two steel tie wires and slid into hole-sawed opening in flooring (Item 1B) and in gypsum board ceiling (Item 1D) or the sole plate (Item 1.1B) and top plate (Item 1.1C) of the chase wall. Bottom edge of wrap strip to project 9/16 to 11/16 in. (14 to 17.5 mm) below bottom surface of flooring and below bottom (ceiling) surface of gypsum board or the bottom edge of the top plate.

   B. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Applied to fill interstices between cables, to the max extent possible, within confines of wrap strip at both the floor and ceiling elevations. Nom 1/4 in. (6 mm) thickness of caulik or putty to be applied to the exposed edge of the wrap strip layer (top of flooring or sole plate and bottom of gypsum board ceiling or top plate). Generous application of caulik or putty to be applied to fill all gaps at the wrap strip/flooring and wrap strip/gypsum board ceiling or wrap strip/top plate interfaces.

   3M COMPANY – CP 25WB+ caulik, MP+ Stix putty, IC 15WB+ caulik, FireDam 150+ caulik or FB-3000 WT Sealant

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The 2 hr fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design Nos. L505, L511 or L536 in the UL Fire Resistance Directory. The F Rating of the firestop system is equal to the rating of the floor-ceiling assembly. The T Rating of the firestop system is 1 and 1-1/2 hr for 1 and 2 hr rated floor-ceiling assemblies, respectively. The general construction features of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 1-1/2 in.

   B. **Wood Joists** – For 1 hr fire-rated floor-ceiling assemblies, nom 10 in. deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped. For 2 hr fire-rated floor-ceiling assemblies, nom 2 by 10 in. lumber joists spaced 16 in. OC with nom 1 by 3 in. lumber bridging and with ends firestopped.

   C. **Gypsum Board** – Nom 4 ft wide by 5/8 in. thick as specified in the individual Floor-Ceiling Design. First layer of wallboard nailed to wood joists. Second layer of wallboard (2 hr fire-rated assembly) screw-attached to furring channels. Max diam of opening is 1-1/2 in.

1.1 **Chase Wall** (Optional not shown) – The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum wallboard chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. or double nom 2 by 4 in. lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. or parallel 2 by 4 in. lumber plates, tightly butted.

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. or two sets of parallel 2 by 4 in. lumber plates, tightly butted. Max diam of opening is 1-1/2 in.

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Cables** – Max three conductor with ground No. 12 AWG (or smaller) NM cables with polyvinyl chloride insulation and jacket materials. Min one cable to max seven cables tightly bundled to be installed eccentrically or concentrically in opening with annular space between the cables and the periphery of the opening of min 0 in. (point contact) to max 1-1/4 in. Cables to be rigidly supported on both sides of Floor-Ceiling assembly.

3. **Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – Min 3/4 in. thickness of fill material applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. or 1-1/4 in. thickness of fill material, for 1 and 2 hr rated assemblies, respectively, applied within the annulus, flush with bottom surface of ceiling or top plate. An additional min 1/4 in. crown of fill material applied to perimeter of penetrant at its egress from the top of flooring and underside of ceiling or from top of sole plate and underside of top plate.

   3M COMPANY – CP 25WB+ Caulk, FB-3000 WT sealant or MP+ Stix Putty

1. **Floor-Ceiling Assembly** – The 1 hr fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory. The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 1-1/2 in. (38 mm).
   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.
   C. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max diam of opening is 1-1/2 in. (38 mm).

1.1 **Chase Wall** (Optional, not shown) – The cables (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum wallboard chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 in. by 6 in. (51 mm by 152 mm) or double nom 2 in. by 4 in. (51 mm by 102 mm) lumber studs.
   B. **Sole Plate** – Nom 2 in. by 6 in. (51 mm by 152 mm) or parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted.
   C. **Top Plate** – The double top plate shall consist of two nom 2 in. by 6 in. (51 mm by 152 mm) or two sets of parallel 2 in. by 4 in. (51 mm by 102 mm) lumber plates, tightly butted. Max diam of opening is 1-1/2 in. (38 mm).
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Cables** – One cable to be installed eccentrically or concentrically in opening with annular space between the cable and the periphery of the opening of min 0 in. (point contact) to max 7/8 in. (0 mm to max 22 mm). Cable to be rigidly supported on both sides of the Floor-Ceiling assembly. The following types of cables may be used:

   A. Max 100 pair No. 22 AWG (or smaller) telecommunication cables with polyvinyl chloride insulation and jacket materials.
   B. Max three conductor with ground No. 2 AWG (or smaller) aluminum SER cable with polyvinyl chloride insulation and jacket material.
   C. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   D. Coaxial cable with polyvinyl chloride jacket.
   E. **Through Penetrating Product** – Any cables, **Armored Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category.

   See **Through Penetrating Product** (XHLY) category in the Fire Resistance Directory for names of manufacturers

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within the annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling or top plate. Min 1/2 in. (13 mm) diam bead of caulk applied at the cable/floor or sole plate interface at point contact location on the top surface of floor or sole plate and at the cable/ceiling or top plate interface at point contact location.

   **3M COMPANY** – FireDam 150+, CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant

The general construction details of the floor-ceiling assembly are summarized below:

   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max diam of opening is 3 in. (76 mm).

   B. **Wood Joists** – Nom 10 in. (254 mm) deep (or deeper) lumber or steel joists, trusses or **Structural Wood Members** with bridging as required and with ends firestopped.

   C. **Gypsum Board** – Nom 4 ft (122 cm) wide by 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max diam of opening is 3 in. (76 mm).

1.1 **Chase Wall** – (Optional, not shown) - The through penetrants (Item No. 2) may be routed through a fire-rated single, double or staggered wood stud/gypsum board chase wall having a fire rating consistent with that of the floor-ceiling assembly. The chase wall shall be constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm) or double nom 2 by 4 in. (51 by 102 mm) lumber studs.

   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Max diam of opening is 3 in. (76 mm).

   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Max diam of opening is 3 in. (76 mm).

   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in individual Wall and Partition Design.

2. **Cables** – Max 2 in. (52 mm) diam cable bundle installed eccentrically or concentrically within opening. Annular space between cable bundle and periphery of opening to be min 0 in. (point contact) to max 1 in. Cable bundle to be rigidly supported on both sides of wall. The following types and sizes of cables may be used:

   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.

   B. Max 1/C No. 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) or PVC jacket.

   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.

   D. Max 3/C No. 10 AWG (or smaller) copper or aluminum conductor SER cables with XLPE or PVC insulation and jacket.

   E. Max 4/C No. 2/0 AWG (or smaller) copper conductor, aluminum clad or steel clad TECK 90 cable with or without PVC jacketed.

   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.

   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.

   H. Max RG/U coaxial cable with fluorinated ethylene insulation and jacket.

   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.

   J. **Through Penetrating Product** – Any cables, **Armored Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category.

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor or sole plate. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling or top plate. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at cable bundle/floor or sole plate interface on top surface of floor or sole plate and at cable bundle/ceiling or top plate interface.

   3M COMPANY – IC 15WB+, CP 25WB+ caulk or FB-3000 WT sealant

*Bearing the UL Classification Mark*
1. **Floor Assembly** – The 1 hr fire-rated wood joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual L500 Series Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Flooring System** – Lumber or plywood subfloor with finish floor of lumber, plywood or **Floor Topping Mixture** as specified in the individual Floor-Ceiling Design. Max area of opening is 20-1/4 in.² (130.6 cm²) with a max dimension of 4-1/2 in. (114 mm).
   B. **Joists** – Nom 2 by 10 in. (51 by 254 mm) deep lumber joists spaced 16 in. (406 mm) OC with nom 1 by 3 in. (25 by 76 mm) lumber bridging and with ends firestopped.
   C. **Furring Channels** – (Not Shown) - Resilient galv steel furring channels installed perpendicular to wood joists (Item 1B) as required in the individual Floor-Ceiling Design.
   D. **Gypsum Board** – Nom 5/8 in. (16 mm) thick as specified in the individual Floor-Ceiling Design. Max area of opening is 20-1/4 in.² (130.6 cm²) with a max dimension of 4-1/2 in. (114 mm).

1.1 **Chase Wall** – (Optional, Not Shown) - The through penetrant (Item 2) may be routed through a 1 hr fire rated single, double or staggered wood stud/gypsum board chase wall constructed of the materials and in the manner specified in the individual U300 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Nom 2 by 6 in. (51 by 152 mm), or double nom 2 by 4 in. (51 by 102 mm) lumber studs.
   B. **Sole Plate** – Nom 2 by 6 in. (51 by 152 mm) or parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Max area of opening is 20-1/4 in.² (130.6 cm²) with a max dimension of 4-1/2 in. (114 mm).
   C. **Top Plate** – The double top plate shall consist of two nom 2 by 6 in. (51 by 152 mm) or two sets of parallel 2 by 4 in. (51 by 102 mm) lumber plates, tightly butted. Max area of opening is 20-1/4 in.² (130.6 cm²) with a max dimension of 4-1/2 in. (114 mm).
   D. **Gypsum Board** – Thickness, type, number of layers and fasteners shall be as specified in the individual Wall and Partition Design.

2. **Cables** – The loading area within the firestop device shall be a min of 0 percent (empty) to a max of 25 percent visual fill. Cable bundle to be centered within opening and rigidly supported on both sides of floor-ceiling assembly. Any combination of the following types and sizes of cables may be used:
   A. Max 2 /C No. 18 AWG with polyvinyl chloride (PVC) insulation and jacket materials.
   B. Max 4 pair No. 24 AWG telephone cable with PVC insulation and jacket materials.
   C. Max RG/U (or smaller) coaxial cable with fluorinated ethylene insulation and jacket materials.
   D. Max 3/C (with ground) No. 14 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   E. Max 1/C No. 4 AWG copper conductor cable with insulation and jacket materials.

3. **Firestop System** – The details of the firestop system shall be as follows:
   A. **Fill, Void or Cavity Material** – Sealant – Min 1/2 in. (13 mm) thickness of fill material within the annulus, flush with top surface of floor or top of chase wall sole plate. Min 1/4 in. (6 mm) thickness of fill material within the annulus, flush with bottom surface of ceiling. Additional 1/4 in. (6 mm) thickness of fill material applied under mounting flange of firestop device (Item 3B) and lapping a min 1 in. (25 mm) on bottom surface of ceiling.
   B. **Firestop Device** – Firestop device consists of a nominal 4 by 4 by 13 in. (102 by 102 by 330 mm) long galv hinged powder coated steel sleeve with an intumescent material lining and foam plugs. Firestop device to be centered within opening and installed in accordance with the accompanying installation instructions. The space between the firestop device and the periphery of the opening shall be nom 1/4 in. (6 mm). Firestop device secured in place by means of steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of floor-ceiling and secured together with steel set screws. The firestop device is to be installed with its ends projecting an equal distance beyond each surface of the floor-ceiling assembly. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the cable bundle and installed flush with each end of device on both sides of floor-ceiling assembly.

*Bearing the UL Classification Mark*

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring** – Normal or Lightweight concrete as specified in the individual G500 Series Design. Max diam of opening is 1-1/2 in. (38 mm).
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of opening is 1-1/2 in. (38 mm).

2. **Cables** – One cable to be installed eccentrically or concentrically in opening with annular space between the cable and the periphery of the opening of min 0 in. (point contact) to max 1-1/4 in. (0 mm to max 32 mm). Cable to be rigidly supported on both sides of floor-ceiling assembly. The following types of cables may be used:
   A. Max seven conductor No. 12 AWG (or smaller) power/control cables with polyvinyl chloride insulation and jacket materials.
   B. Max 100 pair No. 22 AWG (or smaller) telecommunication cables with polyvinyl chloride insulation and jacket materials.
   C. Max four conductor with ground No. 2/0 AWG (or smaller) aluminum SER cables with polyvinyl chloride insulation and jacket materials.
   D. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   E. Nom 1/4 in. (6 mm) diam coaxial cable with polyvinyl chloride jacket.
   F. **Through Penetrating Product** – Max four conductor No. 2/0 AWG copper conductor **Metal Clad Cable** with aluminum or steel armor.

**AFC CABLE SYSTEMS INC**

3. **Fill, Void or Cavity Materials** – **Caulk or Putty** – Min 3/4 in. (19 mm) thickness of fill material applied within the annulus, flush with top surface. Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with bottom surface of ceiling. Min 1/2 in. (13 mm) diam bead of fill material applied at the cable/floor interface at point contact location on the top of surface of floor and at the cable/ceiling interface at point contact location on lower surface of ceiling.

**3M COMPANY** – CP 25WB+, IC 15WB+ caulk, or MP+ Stix putty.

1. **Floor-Ceiling Assembly** – The 1 hr fire rated concrete and steel joist Floor-Ceiling assembly shall be constructed of the materials and in the manner described in the individual G500 Series Design in the UL Fire Resistance Directory, as summarized below:
   A. **Flooring** – Normal or Lightweight concrete as specified in the individual G500 Series Design. Max diam of opening is 3 in. (76 mm).
   B. **Joists** – Steel joists or **Structural Steel Members** as specified in the individual G500 Series Design.
   C. **Gypsum Board** – Min 5/8 in. (16 mm) thick, screw-attached to furring channels as specified in the individual G500 Series Design. Max diam of opening is 3 in. (76 mm).

2. **Cables** – Max 2 in. (51 mm) diam cable bundle installed eccentrically or concentrically within opening. Annular space between cable bundle and periphery of opening to be min 0 in. (point contact) to max 1 in. (0 mm to max 25 mm). Cable bundle to be rigidly supported on both sides of wall. The following types and sizes of cables may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 350 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) or PVC jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 2/0 AWG (or smaller) copper or aluminum conductor SER cables with XLPE or PVC insulation and jacket.
   E. Max 4/C No. 2/0 AWG (or smaller) copper conductor, aluminum clad or steel clad TECK 90 cable with or without PVC jacketed.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. Max RG/U coaxial cable with fluorinated ethylene insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. **Through Penetrating Product** – Any cables, **Armed Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category.

See **Through Penetrating Product (XHL) category** in the Fire Resistance Directory for names of manufacturers

3. **Fill, Void or Cavity Materials** – **Caulk or Sealant** – Min 3/4 in. (19 mm) thickness of caulk applied within annulus, flush with top surface of floor. Min 5/8 in. (16 mm) thickness of caulk applied within annulus, flush with bottom surface of ceiling. Min 1/4 in. (6 mm) diam bead of caulk applied at point contact locations at cable bundle/floor interface on top surface of floor and at cable bundle/ceiling interface.

**3M COMPANY** – CP 25WB+, IC 15WB+ caulk or FB-3000 WT sealant

System No. C-AJ-4003  
January 02, 2009
F Ratings – 2 and 3 Hr (See Item 4)  
T Rating – 0 Hr

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening 36 sq ft (3.3 m²) with one dimension of opening being 36 in. (914 mm) or less.  

   See Concrete Blocks* (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** – Max 36 in. (914 mm) wide by max 6 in. (152 mm) deep steel or aluminum open ladder cable tray. Cable tray to consist of channel-shaped side-rails with boxed channel rungs spaced 9 in. (229 mm) OC. Cable tray side-rails to be formed of min 0.056 in. (1.4 mm) thick (16 ga) galv steel or min 0.125 in. (3.2 mm) thick aluminum. Cable tray rungs to be formed of min 0.029 in. (.8 mm) thick (22 ga) galv steel or min 0.080 in. (2 mm) thick aluminum. When more than one cable tray is installed in opening, min distance between cable trays is 26 in. (660 mm). Min annular space between cable tray and edge of opening is zero in. (point contact). When annular space between cable tray and edge of opening or between multiple cable trays exceeds 6 in., (152 mm), a support channel (Item 7) shall be installed between the cable tray and the edge of the opening to support the edge of the intumescent sheet (Item 4) parallel with the width dimension of the cable tray. 

   Cable trays rigidly supported on both sides of floor or wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 39 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of cables may be used:

   A. Max 1000 kcmil single-conductor power cables; cross-linked polyethylene insulation.
   B. Max No.2 AWG multiconductor power and control cables; cross-linked polyethylene insulation, polyvinyl chloride jacket.
   C. Max 300 pair No. 22 AWG (or smaller) copper conductor communication cable with polyvinyl chloride insulation and jacket material.
   D. Multiple fiber optical communication cable jacketed with polyvinyl chloride and having a max outside diam of 5/8 in. (16 mm).
   E. Max 22 AWG coaxial data cable with polyethylene insulation and polyvinyl chloride jacket.
   F. Max 7C No. 12 AWG (or smaller) multi conductor power and control cables; XLPE insulation, XLPE or polyvinyl chloride (PVC) jacket.
   G. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   H. Max 4/C No. 2/0 AWG (or smaller) copper or aluminum conductor cables with XLPE or PVC insulation and jacket.

4. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheets cut to tightly follow the contours of the cable tray and the cables. Sheets cut to lap a min of 2 in. (51 mm) on the floor or wall surface on all sides of the opening. Sheet is required to be installed on both sides of the floor or wall assembly to attain the 3 hr F Rating. As an option for steel cable tray in floors, the sheet may be installed on only the top surface of the floor to attain a max 2 hr F Rating. When sheet is installed on only the top surface of the floor, the caulk (Item 6) fill materials are also required to be installed on only the top surface of the floor. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface) and secured to floor or wall surface with min 3/16 in. (5 mm) diam by 1-1/4 in. (32 mm) long steel anchor screws, or equivalent, in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of butted seams or slits made to permit installation or the sheet around the cable tray.

   **3M COMPANY** – Type CS-195+

5. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (.51 mm) thick galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 4). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with anom 1/4 in. (6 mm) diam bead of caulk (Item 6). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.
6. **Fill, Void or Cavity Materials** – Graphite Seal, Caulk, Sealant or Putty – One layer of 1/2 in. x 1/16 in. (13 mm by 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Generous application of caulk or putty to be applied to fill all interstices between cables. Generous application of caulk or putty to be applied around the base of the cable tray side-rails and contour of cables at their egress from the intumescent sheet on both sides of the floor or wall assembly.

    **3M COMPANY** – E-FIS or Ultra GS seals, CP 25WB+ caulk, FB-3000 WT sealant, MP+ putty or IC 15WB+ caulk

7. **Support Channel** – (Not Shown) – When area of through opening exceeds 1440 sq in. (9290 cm²), an intermediate support channel shall be installed flush with top surface of floor or both surfaces of wall. Support channels to be min 1-5/8 by 1-5/8 in. (41 by 41 mm) and formed of min 0.093 in. (2.4 mm) thick (No. 12 gauge) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to inside walls of through opening. When width of cable tray exceed 24 in. (610 mm) and/or when more than one cable tray is installed in the opening, additional support channels are to be installed such that intumescent sheet is supported within 6 in. (152 mm) of each side of the cable tray(s). When steel support channels are centered beneath butted seams of intumescent sheets, no steel cover strip (Item 5) is required over butted seam. Intumescent sheet secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers.

When support channel is used beneath butted seam of intumescent sheets, fasteners spaced max 3 in. (76 mm) OC on each side of butted seam. When support channel is located away from intumescent sheet seam, fasteners spaced max 6 in. (152 mm) OC. Prior to installation of the intumescent sheet(s), a nom 1/4 in. (6 mm) diam continuous bead of caulk (Item 6) shall be applied as gasket over the steel support channel.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 528 in.² (0.34 m²) with a max dimension of 44 in. (1.2 m). See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** – Max 40 in. (1 m) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. (1.5 mm) thick galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 40 in. wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. (1.5 mm) thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. Max one cable tray per opening. The annular space between the cable tray and the periphery of the opening will be min 0 in. (0 mm, point contact) to max 8 in. (203 mm). Cable tray to be rigidly supported on both sides of floor or wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (F.O) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material* – Putty** – Min 1/4 in. (6 mm) thick by min 2 in. (51 mm) width of putty wrapped around each cable such that putty extends approximately 1/2 in. (13 mm) above floor or beyond both surfaces of wall. Additional putty installed inside cable tray side rails to completely fill side rails within the opening and extending approximately 1/2 in. (13 mm) beyond both surfaces of floor or wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty. The individual cables may be wrapped with a min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of putty such that the putty extends approximately 1/2 in. (13 mm) above top surface of floor or beyond both surfaces of wall.
   B. **Fill Void or Cavity Material* – Pillows** – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed into the opening to fill annular space between cable tray and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through floor or wall and centered within the opening.

1. **Floor or Wall Assembly** – Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 1008 sq in. (697 cm²) with max dimension of 42 in. (1067 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Trays** – A max of two cable trays are permitted per opening. Max 36 in. (914 mm) wide by max 4 in. (102 mm) deep open-ladder or solid-back cable trays with channel-shaped side rails formed of min 0.050 in. (1.27 mm) thick steel. Cable trays are provided with min 0.050 in. (1.27 mm) thick steel rungs spaced a max of 12 in. (305 mm) apart, or a min 0.050 in. (1.27 mm) thick steel solid back. The annular space between cable trays shall be a min of 2 in. to a max 7 in. (51 mm to max 178 mm). The annular space between cable trays and edge of opening shall be a min of 0 in. (point contact) to a max 7 in. (0 mm to max 178 mm).

3. **Cables** – Aggregate cross-sectional area of cables in cable trays to be max 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of cables may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 3/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (FO) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. Through Penetrating Product* - Any cables, Armored Cable+ or Metal Clad Cable+ currently Classified under the Through Penetrating Product category.

4. **Packing Material** – Min 3-3/4 in. (95 mm) thickness of min 4pcf (64 kg/m³) mineral wool batt insulation firmly packed into the opening as a permanent form so that the thickness of the wool is compressed at least 50 percent. Packing material to be recessed from top surface of floor or from both surfaces of wall to accommodate the required thickness of fill material.

5. **Fill, Void or Cavity Material** – Sealant – Min 3/8 in. (10 mm) thickness of sealant applied within the annulus, flush with top surface of floor or with both surfaces of wall. Min 3/8 in. (10 mm) bead of sealant applied at cable tray/concrete interface at point contact locations on top surface of floor or both surfaces of wall.

3M COMPANY – FB-1000 NS, FB-3000 WT or FB-1003 SL (floors only)

2. **Cable Tray** – Max 40 in. (1 m) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.5 mm) galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 40 in. (1 m) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. (1.5 mm) thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. Max one cable tray per opening. The annular space between the cable tray and the periphery of the opening will be min 0 in. (0 mm, point contact) to max 8 in. (203 mm). Cable tray to be rigidly supported on both sides of floor or wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material*** – **Intumescent Sheet** – Rigid aluminum foil faced sheet with galv steel sheet backer. Intumescent sheet cut to size and extending 2 in. (51 mm) beyond the periphery of the opening. Intumescent sheet with galv sheet face down and secured with nom 1/4 in. (6 mm) diam by 1 in. (25 mm) steel bolts with nuts and washers spaced max 6 in. (152 mm) OC on top surface of floor and both surfaces of wall.

   **3M COMPANY** – Type CS-195+

   B. **Steel Angles** – Nom 9 by 0.028 in. (229 by 0.71 mm) thick channel shaped steel angles formed into a three sided steel sleeve within opening to retain pillows within opening. Top leg of steel angle extends a min 2 in. (51 mm) over composite sheet (Item 4B) and secured by means of No. 10 by 3/4 in. (19 mm) long sheet metal screws spaced 8 in. (203 mm) OC on top surface of floor or both surfaces of wall.

   C. **Fill Void or Cavity Material*** – **Pillows** – Nom 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed into the opening to fill annular space between the cables and the steel angle enclosure (Item 4B). Pillows installed with 9 in. (229 mm) dimension projecting through the floor or wall and centered within the opening. Prior to the installation of the steel angle enclosure (Item 4A), additional pillows installed within the space between the inside surface of the steel angle enclosure and periphery of the opening.

   **3M COMPANY** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows
D. **Fill Void or Cavity Material** – **Putty** – Min 1/4 in. (6 mm) thick by min 2 in. (51 mm) width of putty wrapped around each cable such that putty extends approximately 1/2 in. (13 mm) above floor or beyond both surfaces of wall. Additional putty installed inside cable tray side rails to completely fill side rails within the opening and extending approximately 1/2 in. (13 mm) beyond both surfaces of floor or wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty. The individual cables may be wrapped with a min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of putty such that the putty extends approximately 1/2 in. (13 mm) above top surface of floor or beyond both surfaces of wall. At point contact location, min 1/2 in. (13 mm) thickness of putty applied at the concrete/cable tray interface on top surface of floor or both surfaces of wall.

**3M COMPANY** – **MP+ or Cable Wrap**

*Bearing the UL Classification Mark

1. **Floor or Wall Assembly** — Min 2-1/2 in. (64 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 6 in. (152 mm). When thickness of floor or wall assembly is less than 4-1/2 in. (114 mm), F Rating is 2 hr.

See Concrete Blocks (CAZT) category in Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** — Nom 2 in. (51 mm) wide by 2 in. (51 mm) high welded wire basket cable tray formed from min 0.23 in. (5.8 mm) thick steel wires in the longitudinal direction and 0.19 in. (4.8 mm) wires in the transverse direction. Transverse wires shall be spaced max 4 in. OC. One cable tray shall be centered within the firestop device (Item 4A). The annular space between the cable tray and the periphery of the device shall be a nom 1 in. (25 mm). Cable tray to be rigidly supported on both sides of floor or wall assembly.

3. **Cables** — Cable fill within cable tray shall be a min 0 in. (0 mm, 0% visual fill) to a max 2 in. (51 mm, 100% visual fill). Cable bundle to be rigidly supported on both sides of floor or wall assembly. Any combination of the following types and sizes of cables may be used:
   A. Max 2/C No. 18 AWG copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   B. Max 4 pair No. 24 AWG copper conductor Cat5e or Cat 6 telephone cable with PVC insulation and jacket materials.
   C. Max RG/U (or smaller) coaxial cable with foam high density polyethylene insulation and PVC jacket materials.
   D. Max 3/C (with ground) No. 14 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   E. Max 1/C No. 8 AWG copper conductor cable with PVC insulation and nylon jacket materials.
   F. Max 12 core No. 26 AWG shielded multi coax cable with foam high density polyethylene insulation and PVC jacket.
   G. Max 48 MM62.5 micron fiber optic cables with having a min FT-6 rating.
   H. Max 62.5/125 micron fiber optic cables with having a min Riser rating.
   I. Max 1/C 2/0 AWG non halogen copper conductor cable.
   J. Max 300 pair No. 24 AWG copper conductor telephone cable with PVC insulation and jacket materials.
   K. Max 30 pair No. 22 copper conductor shielded switchboard cable with PVC insulation and jacket materials.
   L. Max 7/C No. 12 AWG copper conductors with PVC insulation and jacket materials.
   M. Max 4 pair No. 23 AWG copper conductor Cat 6 telephone cable with PVC insulation and jacket materials.
   N. Max three copper conductors (with ground) No. 12 AWG Metal Clad Cable+.
   O. Max four copper conductors No. 2/0 AWG Metal Clad Cable+.

4. **Firestop System** — The firestop system shall consist of the following:
   A. **Firestop Device** — The firestop device consists of a nom 4 by 4 by 10 in. (102 by 102 by 254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device to be centered within opening and installed with ends projecting an equal distance beyond each surface of the floor or wall assembly in accordance with the accompanying
System No. C-AJ-4082 continued

installation instructions. The annular space between the firestop device and the periphery of the opening shall be nom 1 in. (25 mm). Firestop devices secured in place by means of fill material (Item 4B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of floor or wall after installation of fill material and secured to together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the cable bundle and installed flush with each end of device on both sides of floor or wall assembly.

3M COMPANY — 3M Fire Barrier Pass-Through Device

B. Fill, Void or Cavity Materials* - Caulk or Putty — Min 1 in. (25 mm) thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall prior to the installation of the mounting flanges. Also as an option, foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device.

3M COMPANY — Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

1. **Floor or Wall Assembly** – Min 2-1/2 in. (64 mm) thick lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete. The area of the opening shall be max 512 in.² (3303 cm²) with a max dimension of 32 in. (813 mm).

2. **Cable Tray** – Max two 24 in. (610 mm) wide by max 6 in. (151 mm) deep open-ladder cable tray with channel-shaped side rails formed of 0.065 in. (1.651 mm) to 0.10 in. (2.54 mm) thick aluminum or min 0.060 in. (1.65 mm) thick galv steel. The annular space between the cable trays shall be min 2 in. (51 mm). The annular space between the cable tray and the periphery of the opening shall be min 0 in. (point contact) to max 2 in. (51 mm). Cable tray to be rigidly supported on both sides of floor or wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be max 45 percent of the cross-sectional area of the cable tray based on a max 5 in. (127 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of copper conductor or fiber optic cables may be used:
   A. Max 7/C No. 12 AWG with polyvinyl chloride (PVC) insulation and PVC jacket.
   B. Max 300 pair - No. 24 AWG cable with PVC insulation and jacket.
   C. 1/C, max 500 kcmil with cross-linked polyethylene (XLPE) insulation and jacket.

4. **Fill, Void or Cavity Material** – **Foam** – Min 2-1/2 in. (64 mm) thickness of fill material applied within the annulus, flush with top surface of floor or both surfaces of wall. Foam to be injected into the interstices between all cables. An additional 1/2 in. (13 mm) bead of foam shall be applied at the point contact locations.

1. **Floor or Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 600 in² (3871 cm²) with max dimension of 30 in. (762 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Trays** — A maximum of two 24 in. (610 mm) wide by 6 in. (31 mm) deep (or smaller) open-ladder cable tray with channel-shaped side rails formed of min 0.047 in. (1.2 mm) thick aluminum or galv steel and with 1-1/2 in. (38 mm) wide by 1 in. (25 mm) channel shape rungs spaced 9 in. (229 mm) OC. The annular space between the cable trays shall be min 2 in. (51 mm) to max 7 in. (178 mm). The annular space between the cable tray and the periphery of the opening shall be min 2 in. (51 mm) at rails and min 1/2 in. (13 mm) at rungs. Cable trays to be rigidly supported on both sides of floor or wall assembly.

3. **Cables** — Aggregate cross-sectional area of cables in each cable tray to be max 45 percent of the cross-sectional area of the cable tray. Any combination of the following types and sizes of copper conductor or fiber optic cables may be used:
   A. Max 1/C, 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) insulation and polyvinyl chloride (PVC) jacket.
   B. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with cross-linked polyethylene (XLPE) insulation or polyvinyl chloride (PVC) jacket.
   C. Max 3/C No. 2/0 AWG (or smaller) copper conductor SER cable with polyvinyl chloride (PVC) insulation and jacket.
   D. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   E. Max 300 pair, 200 pair, and 150 pair (or smaller) No. 22 AWG copper conductor telephone cable with PVC insulation and jacket materials.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C (with ground) No. 14 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   H. Max RG/U (or smaller) coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket material.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor Cat 5e or Cat 6 telephone cable with PVC insulation and jacket materials.
   J. **Through Penetrating Product** — Any cables, **Armed Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category. See **Through Penetrating Product** (XHLY) category in the Fire Resistance Directory for names of manufacturers.
   K. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.

4. **Firestop System** — The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material** — Blocks installed with 5 in. (127 mm) dimension projecting through opening flush with bottom surface of floor or centered in wall. In solid concrete floors or walls thicker than 5 in. (127 mm), the fire block can be installed flush with top or bottom surface of floor or flush with one side of wall. In concrete block walls, fire block to fill the entire thickness of wall opening unless concrete block is solid filled. Blocks to be firmly packed to fill the opening area between and around the penetrants. Blocks can be cut to fit around penetrants and within smaller annular spaces.

5. **Through Penetrating Product** — Fire Barrier Rated Foam, FIP 1-Step

6. **Cable Trays** — Through Penetrations Applicators and Specifiers Guide

www.3M.com/firestop 1-800-328-1687 3M Fire Protection Products
System No. C-AJ-4109 continued

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1200-6400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified **Concrete Blocks**. Max area of opening is 180 in.² (1161 cm²) with a max dimension of 30 in. (762 mm). See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** – Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open-ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (16 gauge) galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. The min annular space between the cable tray and the periphery of opening shall be 0 in. (point contact). The max annular space between the cable tray and the periphery of the opening shall be 2 in. (51 mm) to top of opening and 6 in. to side of opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be min 0 percent to max 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following types and sizes of cables may be used:
   - **A.** Max 750 kcmil single-conductor power cables; cross-linked polyethylene (XLPE) insulation.
   - **B.** Max 7C No. 12 AWG (or smaller) multi conductor power and control cables; XLPE insulation, XLPE or polyvinyl chloride (PVC) jacket.
   - **C.** Max 300 pair No. 22 AWG (or smaller) copper conductor with PVC insulation and jacket.
   - **D.** Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   - **E.** Max 4/C No. 2/0 AWG (or smaller) copper or aluminum conductor cables with XLPE or PVC insulation and jacket.
   - **F.** Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.

4. **Firestop System** – The firestop system shall consist of the following:
   - **A. Fill, Void or Cavity Materials** – **Caulk, Sealant or Putty** – A nom 1 in. thick by 1 in. (25 mm by 25 mm) wide strip of moldable putty or caulking shall be applied to follow the contours of the cable fill on bottom of cable tray and project approx 1/2 in. to 7/8 in. (13 mm to 22 mm) beyond surface of wall on both sides of wall. A min 5/8 in. (16 mm) width of caulking or putty shall be applied to fill the channel of the cable tray side-rails and positioned flush with projecting a max of 1/2 in. (13 mm) beyond the outside surface of both sides of wall. A min 1/8 in. (3.2 mm) thickness by 2 in. (51 mm) wide strip of putty shall be applied over each layer or row of cables and project approx 1/2 in. to 7/8 in. (12 mm to 22 mm) beyond the outside surface of the intumescent slide sheet on each side of wall assembly. After installation of the intumescent slide sheet, putty pressed into cable fill and against intumescent sheet to fill all openings. Nom 1/2 in. (13 mm) diam “ropes” of putty applied around cable tray side-rail members at their egress from the intumescent sheet (Item 4B) and pressed into the intersections.
     - **3M COMPANY** – CP 25WB+ caulk, FB-3000 WT sealant or MP+ Stix putty
   - **B. Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Min 2 in. (51 mm) wide sheets cut to frame opening on all sides and overlap a min 2 in. (51 mm) onto wall surface. Side pieces of sheets shall be cut to cover annular space to side rails. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to wall with min 2-1/4 in. (57 mm) long bugle-head steel masonry anchors in conjunction with min 3/4 in. (19 mm) steel washers. Fasteners spaced a max 1 in. (25 mm) from each end and each seam of sheets and not to exceed 6 in. (152 mm) OC.
     - **3M COMPANY** – CS-195+
   - **C. Steel Z Angle Retainer Plates** – Min 16 gauge galv steel retaining plates 4 in. (102 mm) wide overall, 3 in. by 1 in. (76 mm by 25 mm) with 3/8 in. (10 mm) deep break. Plate to be height of opening plus 4 in. (102 mm). Plate to be installed over previously installed intumescent sheet on both sides of opening with min 2-1/4 in. (57 mm) long steel masonry anchors in conjunction with min 3/4 in. (19 mm) diam steel washers. Fasteners spaced a max 1 in. (25 mm) from top and bottom of plates and not to exceed 6 in. (152 mm) OC. Plates to extend 2 in. (51 mm) above and below opening. The 3 in. (76 mm) dimension of the plates installed such that the outside edges of plates are flush with intumescent sheet outside edges.
**System No. W-J-4044 continued**

D. **Fill, Void or Cavity Materials** – Intumescent Sheet – (Slide Sheet) – Slide sheet cut to width of opening to allow installation into Z retaining angle brackets. Bottom of sheet cut to closely follow the contours of the cable fill within the cable tray. Slide sheet to be of sufficient height to overlap top of opening min 2 in. (51 mm). Sheet to be installed with the galv steel sheet backer exposed.

E. **Steel Reinforcement Angle** – Min 1/8 in. (3.2 mm) thick 1 in. by 1 in. (25 mm by 25 mm) steel angle. Angle to be placed midway across width of slide sheet. Angle attached to sheet with 1/4 in. (6 mm) long steel sheet metal TEK screws spaced max 4 in. (102 mm) from each end and a max 9 in. (229 mm) O.C. Screws not used on ends over angle retainer plate.

F. **Fill, Void or Cavity Materials** – Graphite Seal – (Not Shown) – One layer of 1/2 in. (13 mm) wide by 1/16 in. (1.6 mm) thick adhesive backed graphite intumescent seal positioned under intumescent slide sheet 1/2 in (13 mm) from top edge of slide sheet.

*3M COMPANY – E-FIS or Ultra GS seals

*Bearing the UL Classification Mark

Copyright © 2010 Underwriters Laboratories Inc.
1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 720 in.² (0.46 m²) with a max dimension of 30 in. (762 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** – Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.47 mm) galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. (1.52 mm) thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. Max two cable trays per opening. The annular space between the cable trays to be min 6 in. (152 mm) to max 18 in. (457 mm). The annular space between the cable trays and the periphery of the opening to be min 0 in. (0 mm, point contact) to max 18 in. (457 mm). Cable trays to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. 10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material** – Putty – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at the bottom corners of opening and extending a min 1 in. (25 mm) in both directions from each corners, flush with both surfaces of wall. Min 5/8 in. (16 mm) thickness of putty installed between bottom of cable tray and bottom of opening on both surfaces of wall. As an option, the putty between the bottom of the cable tray and the bottom of the opening may be replaced by pillows (Item 4B), provided the annular space is such that the pillows can be tightly fitted into the annular space. After installation of pillows and intumescent sheet (Items 4B and 4C), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty on both sides of wall.

   **3M COMPANY** – MP+ Putty

   B. **Fill Void or Cavity Material** – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cable trays and periphery of opening and the annular space between the cable trays when two trays are installed within the opening. A min of two rows of pillows to be installed above the top cable tray in opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening except that the top row of pillows in the opening shall be installed with the 6 in. (152 mm) dimension centered in the wall such that the top row is completely covered by the intumescent sheet (Item 4C).

   **3M COMPANY** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows
C. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. The one piece sheet shall be cut to lap a min of 2 in. (51 mm) onto the wall at the top and sides of the opening on both sides of the wall. Sheet shall be cut to completely lap the top row of pillows above the top cable tray on both sides of the wall. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to wall with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel masonry anchors in conjunction with min 1-1/4 in. (32 mm) diam steel washers. Max spacing of anchors not to exceed 6 in. (152 mm) with fasteners located a max 1 in. (25 mm) from each corner of the sheet.

**3M COMPANY** – Type CS-195+ Sheet

*Bearing the UL Classification Mark*

1. **Wall Assembly** – Min 6 in. thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 720 in.² (0.46 m²) with a max dimension of 30 in. (762 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** – Max 12 in. (305 mm) wide by max 1-1/2 in. (38 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.062 in. thick (1.6 mm) aluminum with nom 1 in. (25 mm) wide by 1 in. (13 mm) high rungs spaced 9 in. (229 mm) OC or max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid. Max two cable trays per opening. The annular space between the cable trays shall be min 6 in. (152 mm) to max 12 in. (305 mm). The annular space between the cable trays and the periphery of the opening shall be min 1-1/2 in. (38 mm) to max 20 in. (508 mm). Cable trays to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the open ladder aluminum cable tray based on a max 1-1/2 in. (38 mm) cable loading depth. Aggregate cross-sectional area of cables in welded wire basket cable tray not to exceed 23 percent of the cross-sectional area of the welded wire basket cable tray based on a max 1-1/2 in. (38 mm) cable loading depth. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material** – Putty – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at the bottom corners of opening and extending a min 1 in. (25 mm) in both directions from each corners, flush with both surfaces of wall. Min 5/8 in. (16 mm) thickness of putty installed between bottom of cable tray and bottom of opening and between top of cable tray and bottom of composite sheet on both surfaces of wall. As an option, the putty between the bottom of the cable tray and the bottom of the opening may be replaced by pillows (Item 4B), provided the annular space is such that the pillows can be tightly fitted into the annular space. After installation of pillows and intumescent sheet (Items 4B and 4C), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty on both sides of wall.

   **3M COMPANY** – MP+

   B. **Fill Void or Cavity Material** – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cable trays and periphery of opening and the annular space between the cable trays when two trays are installed within the opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening except that the top row of pillows in the opening shall be installed with the 6 in. (152 mm) dimension centered in the wall such that the top row is completely covered by the intumescent sheet (Item 4C).

   **3M COMPANY** – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows
System No. W-J-4062 continued

C. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. The one piece sheet shall be cut to lap a min of 2 in. (51 mm) onto the wall at the top and sides of the opening on both sides of the wall. Sheet shall be cut to completely lap the top row of pillows above the top cable tray on both sides of the wall. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with nom 1/4 by 1-1/4 in. (6 by 32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with fasteners located a max 1 in. (25 mm) from each corner of the sheet.

**3M COMPANY** – Type CS-195+

*Bearing the UL Classification Mark

1. **Wall Assembly** – Min 6 in. thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete wall. Wall may also be constructed of any UL Classified Concrete Blocks*. Max area of opening is 720 in.² (0.46 m²) with a max dimension of 30 in. (762 mm).

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Cable Tray** – Max two cable trays to be installed within the opening. The annular space between the cable trays shall be min 6 in. (152 mm) to max 10 in. (254 mm). The annular space between the cable trays and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 10 in. (254 mm). Cable trays to be rigidly supported on both sides of wall assembly. The following types of the cable trays may be used:

   A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC
   B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. thick (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.
   C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area based on a max 3 in. (76 mm) cable loading depth within the open ladder cable tray. Aggregate cross-sectional area of cables in welded wire basket cable tray not to exceed 23 percent of the cross-sectional area of the welded wire basket cable tray based on a max 1-1/2 in. (38 mm) cable loading depth. Any combination of the following types and sizes of cables may be used:

   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:

   A. Fill Void or Cavity Material* – Putty – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at the bottom corners of opening and extending a min 1 in. (25 mm) in both directions from each corners, flush with both surfaces of wall. Min 5/8 in. (16 mm) thickness of putty installed between bottom of cable tray and bottom of opening and between top of cable tray and bottom of composite sheet on both surfaces of wall. As an option, the putty between the bottom of the cable tray and the bottom of the opening may be replaced by pillows (Item 4B), provided the annular space is such that the pillows can be tightly fitted into the annular space. After installation of pillows and intumescent sheet (Items 4B and 4C), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty on both sides of wall.

   3M COMPANY – MP+
System No. W-J-4063 continued

B. **Fill Void or Cavity Material** – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cable trays and periphery of opening and the annular space between the cable trays when two trays are installed within the opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening except that the top row of pillows in the opening shall be installed with the 6 in. (152 mm) dimension centered in the wall such that the top row is completely covered by the intumescent sheet (Item 4C).

3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

C. **Fill Void or Cavity Materials** – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv steel sheet backer. The one piece sheet shall be cut to lap a min of 2 in. (51 mm) onto the wall at the top and sides of the opening on both sides of the wall. Sheet shall be cut to completely lap the top row of pillows above the top cable tray on both sides of the wall. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to concrete, with min 1/4 in. (6 mm) diam by 1-1/4 in. (32 mm) long steel concrete anchors in conjunction with nom 1/4 by 1-1/4 in. (6 by 32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with fasteners located a max 1 in. (25 mm) from each corner of the sheet.

3M COMPANY – Type CS-195+

*Bearing the UL Classification Mark

1. **Wall Assembly** – Min. 4-3/4 in. (121 mm) and 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete for 1 hr and 2 hr F Ratings, respectively. Wall may also be constructed of any UL classified Concrete Blocks*. Max area of opening is 1080 sq in. (0.7 m²) with a max dimension of 36 in. (914 mm).

   See Concrete Blocks (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Cable Rack** – Max 20 in. (508 mm) wide by 2 in. (51 mm) deep steel cable rack formed from 1/4 in. (6 mm) thick steel with min 1 in. (25 m) wide rungs spaced max 9 in. (229 mm) OC. Width of cable rack to be at least 4 in. (102 mm) less than wall opening. The annular space between the cable rack and the bottom of the opening shall be min 0 in. (point contact). Side rails of cable rack to be min 2 in. (51 mm) to max 13 in. (330 mm) from side edges of wall opening. Cable rack to be rigidly supported on both sides of wall assembly.

2A. **Cable Tray** – (Not Shown) - As an alternate to the steel cable rack (Item 2), one of the following types of cable tray may be used:

   A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.

   B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. thick (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.

   C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid.

   Width of cable tray to be at least 4 in. (102 mm) less than wall opening. The annular space between the cable tray and the bottom of the opening shall be min 2 in. (51 mm). Side rails of cable tray to be min 2 in. (51 mm) to max 13 in. (330 mm) from side edges of wall opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – When cable rack (Item 2) is used, aggregate cross-sectional area of cables in opening to be max 25 percent of the cross-sectional area of the opening based on a max 15 in. (381 mm) deep cable loading depth on the cable tray. When cable tray (Item 2A) is used, the aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth in the cable tray. Any combination of the following types and sizes of cables may be used:

   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.

   B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.

   C. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+.

   D. Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+.

   E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.

   F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.

   G. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.

   H. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.

   I. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
System No. W-J-4069 continued

J. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.
K. Max 62.5/125 micron fiber optic cable with having a min Riser rating.
L. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.

4. Firestop System – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material** – Putty – Nom 1/8 in. (3 mm) thick by 4 in. (102 mm) band of putty installed around cable bundle at mid-depth of wall. Nom 1/2 in. (13 mm) rope of putty used to fill any gaps or voids around perimeter of opening and around cable fill.
   
   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – MP+ or Cable Wrap Putty

   B. **Fill, Void or Cavity Material** – Pillows – Pillows installed length-wise through wall and tightly-packed to fill opening between the penetrants and the periphery of the opening. The pillows may be cut to decrease their width and repaired with min 0.002 in. (0.05mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13mm).

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Pillows or Fire Barrier Self-Locking Pillows

*Bearing the UL Classification Mark

1. **Wall Assembly** – Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600 - 2400 kg/m³) concrete wall. The area of the opening shall be max 512 in.² (3303 cm²) with a max dimension of 32 in. (813 mm).

2. **Cable Tray** – Max two 24 in. (610 mm) wide by max 6 in. (151 mm) deep open-ladder cable tray with channel-shaped side rails formed of 0.065 in. (1.651 mm) to 0.10 in. (2.54 mm) thick aluminum or min 0.060 in. (1.65 mm) thick galv steel. The annular space between the cable trays shall be min 2 in. (51 mm). The annular space between the cable tray and the periphery of the opening shall be min 0 in. (point contact) to max 2 in. (51 mm). Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be max 45 percent of the cross-sectional area of the cable tray based on a max 5 in. (127 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of copper conductor or fiber optic cables may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product** – Any cables, **Armored Cable** or **Metal Clad Cable** currently Classified under the Through Penetrating Product category. See Through Penetrating Product (XHLY) category in the Fire Resistance Directory for names of manufacturers.

4. **Fill, Void or Cavity Material** – **Foam** – Min 6 in. (152 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Foam to be injected into the interstices between all cables. An additional 1/2 in. (13 mm) bead of foam shall be applied at the point contact locations.

**3M COMPANY** – Fire Barrier Rated Foam, FIP 1-Step

*Bearing the UL Classification Mark

1. **Wall Assembly** — Min. 4-3/4 in. (121 mm) and 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150pcf or 1600-2400 kg/m³) concrete for 1 hr and 2 hr F and FH Ratings, respectively. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 560 sq in. (0.36 m²) with a max dimension of 28 in. (711 mm). The hourly T, FT and FTH Ratings are 0 and 1/2 hr for 1 and 2 hr rated assemblies, respectively. See **Concrete Blocks** (CAZT) in the Fire Resistance Directory for names of manufacturers.

2. **Cable Rack** — Max 20 in. (508mm) wide by 2 in. (51 mm) deep steel cable rack formed from 1/4 in. (6 mm) thick steel with min 1 in. (25 mm) wide rungs spaced max 9 in. (229 mm) OC. The annular space between the cable rack and the bottom of the opening shall be min 0 in. (point contact) to max 4 in. (102 mm). Side rails of cable rack to be min 0 in. (point contact) to max 4 in. (102 mm) from side edges of wall opening. Cable rack to be rigidly supported on both sides of wall assembly.

2A. **Cable Tray** — (Not Shown) - As an alternate to the steel cable rack (Item 2), one of the following types of cable tray may be used:
   A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.
   B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.
   C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid.

   The annular space between the cable tray and the bottom of the opening shall be min 0 in. (point contact). Side rails of cable tray to be min 0 in. (point contact) to max 4 in. (102 mm) from side edges of wall opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** — When cable rack (Item 2) is used, aggregate cross-sectional area of cables in opening to be max 40 percent of the cross-sectional area of the opening based on a max 15 in. (381 mm) deep cable loading depth on the cable tray. When cable tray (Item 2A) is used, the aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth in the cable tray. Any combination of the following types and sizes of cables may be used:
   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.
   B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
   C. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+.
   D. Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+.
   E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.
   F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.
   G. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   H. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.
   I. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   J. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.
   K. Max 62.5/125 micron fiber optic cable with having a min Riser rating.
   L. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.
4. **Fill, Void or Cavity Material* — Foam** — Min 4-3/4 in. (121 mm) or min 6 in. (152 mm) thickness of fill material for 1 and 2 hr rated walls, respectively, applied within the annulus, flush with both surfaces of wall. Foam to be injected into the interstices between all cables. An additional 1/2 in. (13 mm) bead of foam shall be applied at the point contact locations.

1. **Wall Assembly** – The fire-rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Steel Studs** – Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC. The opening in the wall to accommodate the cable tray (Item 2) shall be framed on all sides using lengths of steel stud installed between the vertical studs and screw-attached to the steel studs at each end. The framed opening in the wall shall be min 1/2 in. (13 mm) to max 6 in. (152 mm) wider and higher than the width and height of the cable tray such that, when the cable tray is centered in the opening, a 1/4 to 3 in. (6 to 76 mm) clearance is present between the cable tray and the framing on all four sides.
   B. **Gypsum Board** – Two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design.

2. **Cable Tray** – Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder steel or aluminum cable tray. Cable tray to consist of channel-shaped side-rails with boxed channel rungs spaced 9 in. (229 mm) OC. Cable tray centered in framed opening and rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 32 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of copper conductor cables may be used:
   A. Max 350 kcmil single-conductor power cables; cross-linked polyethylene (XLPE) insulation.
   B. Max No. 2/0 AWG multiconductor power and control cables; XLPE insulation, XLPE or polyvinyl chloride (PVC) jacket.
   C. Max No. 12 AWG multiconductor power and control cables; XLPE insulation, XLPE or PVC jacket.
   D. Max 7C No. 12 AWG (or smaller) multi conductor power and control cables; XLPE insulation, XLPE or polyvinyl chloride (PVC) jacket.
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   F. Max 1-10/125 Fiber Optic (F.O.) cable with PVC insulation and jacket.
   When cables A and B are used in steel cable tray, T Rating is 0 hr.
   When cables A and B are used in aluminum cable tray, T Rating is 1/2 hr.
   When cables C, D, E and F are used in steel cable tray, T Rating is 1/2 hr.
   When cables C, D, E and F are used in aluminum cable tray, T Rating is 1 hr.

4. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. Sheets cut to tightly-follow the contours of the cables around the entire perimeter of the cable tray and cable fill. Sheets cut to lap a min of 2 in. (51 mm) on the wall on all sides of the opening on both sides of the wall. Prior to installation, a min 1/4 in. (6 mm) diam bead of caulk (Item 7) or a nom 1/8 by 1/2 in. (3.2 by 13 mm) ribbon of putty (Item 7A) shall be applied as a gasket approx 1 in. (25 mm) from and on all sides of the through opening. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of batted seams or slits made to permit installation of the sheet around the cable tray.

3M COMPANY – Type CS-195+
System No. W-L-4004 continued

5. **Steel Cover Strip** – Min 2 in. (51 mm) wide strip of min 0.020 in. (.51 mm) thick (26 gauge) galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 5). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/4 in. (6 mm) diam bead of caulk (Item 7) or a nom 1/8 by 1/2 in. (3.2 by 13 mm) ribbon of putty (Item 7A). Steel cover strip secured to galv steel sheet backer of intumescent sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

6. **Fill, Void or Cavity Materials** – **Graphite Seal, Caulk, Sealant or Putty** – One layer of 1/2 in. x 1/16 in. (13 mm by 1.6 mm) adhesive backed graphite intumescent seal positioned under intumescent sheet around entire perimeter of through opening or min 1/4 in. (6 mm) diam continuous bead of caulk or putty applied to edge of intumescent sheet at its interface with surface of floor or wall around entire perimeter of through opening. Caulk applied to fill all interstices between cables and between cables and wrap strip (Item 4). Caulk depth to be min 2 in. (51 mm) within confines of wrap strip on both sides of floor or wall assembly. Generous application of caulk to be applied around the base of the cable tray side-rails and contour applied wrap strips at their egress from the intumescent sheet on both sides of the wall assembly. Caulk also applied to cover all exposed edges of wrap strips to a min thickness of 1/8 in. (3.2 mm).

   3M COMPANY – E-FIS or Ultra GS seal, CP 25WB+ caulk, MP+ Stix putty, IC 15WB+ caulk or FB-3000 WT sealant

6A. **Fill, Void or Cavity Materials** – **Putty** – As an alternate to the caulk (Item 6) when steel cable tray is used, nom 1/4 in. (6 mm) thick by 2 in. (51 mm) wide strips of moldable putty shall be applied to follow the contours of the cable fill on the top and bottom of the cable tray prior to installation of the intumescent sheets (Item 5). Moldable putty strips installed to project approx 7/8 in. (22 mm) beyond each face of the intumescent sheet on each side of the wall assembly. After installation of the intumescent sheets, putty pressed into cable fill and against intumescent sheet to fill all openings. Nom 1/2 in. (13 mm) diam "ropes" of putty applied around cable tray side-rail members at their egress from the intumescent sheet and pressed into the intersections. A min 1/8 in. (3.2 mm) thickness of putty shall be applied to cover the short lengths of wrap strip installed to fill the channel of the steel cable tray side-rails.

   3M COMPANY – MP+ Stix

1. **Wall Assembly** – The 1 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 in. by 4 in. (51 mm by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing member shall be installed in stud cavity at the bottom of the opening to support cable tray (Item 2).

   B. **Gypsum Board** – One layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. The opening shall be sized to be 1 in. (25 mm) wider and 2 in. (51 mm) higher than the width and depth of the cable tray. If cable tray is installed in a wood stud/gypsum board assembly, max width of opening is 14-1/2 in. (368 mm).

2. **Cable Tray** – Max 18 in. (457 mm) wide by max 4 in. (102 mm) deep aluminum or steel open-ladder cable tray. One cable tray to be installed in the opening. The annular space between the cable tray and the periphery of the opening shall be min 0 in. (0 mm) (point contact) to max 2 in. (51 mm). Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be max 43 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of cables may be used:
   
   A. Max 200 pair No. 24 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacket.
   
   B. Max 1/C 1000 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   
   C. Max 3/C No. 2/0 AWG (or smaller) aluminum or copper conductor cable with XLPE insulation and PVC jacket.
   
   D. Max 7/C No. 12 AWG (or smaller) copper conductor cable with PVC insulation and jacket.
   
   E. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.
   
   F. Max 3/C with ground No. 12 AWG (or smaller) NM cable with PVC insulation and jacket.

4. **Firestop System** – The firestop system shall consist of the following:
   
   A. **Fill, Void or Cavity Materials** – Caulk, Sealant or Putty – Min 5/8 in. (16 mm) thickness of caulk or putty installed within annular space between sides of cable tray and periphery of opening flush with each side of wall surfaces. Nom 1/2 in. (13 mm) thick by 1 in. (25 mm) wide strips of caulk or putty shall be applied to follow the contours of top of cables prior to installation of intumescent sheets (Item 4B). Caulk or putty strips installed to project approx 1/2 in. (13 mm) beyond each face of the intumescent sheet on each side of the wall assembly. After installation of the intumescent sheets, min 5/8 in. (16 mm) thickness of caulk or putty applied within all openings between the intumescent sheet and the cables and cable tray, on each side of wall, flush with each face of intumescent sheet or extending a max of 3/8 in. (10 mm) beyond each face of intumescent sheet.

   3M COMPANY – CP 25WB+, IC 15WB+ caulk, FB-3000 WT sealant or MP+ Stix putty

   B. **Fill, Void or Cavity Materials** – Intumescent Sheet – Foil-faced sheet with galv steel sheet backer. Sheets cut in two pieces (top and bottom). Bottom piece cut to tightly follow the contours of cable tray with a 0 in. (point contact) to max 3/8 in. (0 mm to max 10 mm) space between sheet and cable tray on each side of wall. Top piece cut to tightly-follow the contours of cable tray and cable fill on each side of wall with a 0 in. (point contact) to max 3/8 in. (0 mm to max 10 mm) space between sheet and cable tray and a min 1/4 in. to max 3/8 in. (6 mm to max 10 mm) space between sheet and cables. Sheets cut to lap a min of 2 in. (51 mm) on the wall on top and bottom of opening and to extend a min of 1 in. (25 mm) onto vertical studs on both sides of opening. Sheets to be installed on each side of wall with the galv steel sheet backer exposed (foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1-1/2 in (38 mm) long steel drywall screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with additional fasteners located on each side of batted seams of top and bottom pieces. Sheets to be fastened to gypsum board with min 1/4 in. (6 mm) diam steel toggle bolts in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers in any areas when no stud is present.

   3M COMPANY – CS-195+

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 540 sq. in. (0.35 m2) with a max dimension of 30 in. (762 mm).

The hourly F and FT Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings for the firestop system are 0 and 1/2 hr for 1 and 2 hr rated assemblies, respectively.

2. **Cable Tray** – Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. (1.5 mm) thick (16 gauge) galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. (1.5 mm) thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. Max two cable trays per opening. The annular space between the cable trays is a min 6 in. (152 mm) to max 10 in. (254 mm) The annular space between the cable trays and the periphery of the opening will be min 0 in. (0 mm, point contact) to max 5 in. (127 mm). Cable trays to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.
4. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill Void or Cavity Material* – Putty** – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at all corners of opening and extending a min 1 in. (25 mm) in both directions from each corners, flush with both surfaces of wall. Additional putty installed inside cable tray side rails to completely fill side rails within the opening and extending approximately 1/2 in. (13 mm) beyond both surfaces of wall. After installation of pillows (Item 4B) all voids within the opening shall be filled with a min 1 in. (13 mm) thickness of putty. The individual cables may be wrapped with a min 1/4 in. (6 mm) thickness, min 2 in. (51 mm) width of putty such that the putty extends approximately 1/2 in. (13 mm) beyond both surfaces of wall.

3M COMPANY – MP+ or Cable Wrap

   I. Ratings are 7 and 4 CFM/sq ft. at ambient and 400 °F, respectively, when individual cables are wrapped with 3M Cable Wrap or MP+ putty in accordance with the installation instructions. I. Ratings are 22 and 21 CFM/sq ft. at ambient and 400 °F, respectively, when individual cables are not wrapped with 3M Cable Wrap or MP+ putty.

   B. **Fill Void or Cavity Material* – Pillows** – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between cable tray and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening.

3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

*Bearing the UL Classification Mark

System No. W-L-4044  
September 07, 2004  
F Ratings – 1 & 2 Hr (See Item 1)  
T Ratings – 1/4 & 1/2 Hr (See Item 1)

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing shall consist of steel channel studs. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 180 in.² (1161 cm²) with a max dimension of 30 in. (762 mm).

   The hourly F Rating for the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating for the firestop system is 1/4 and 1/2 hr for 1 and 2 hr rated assemblies, respectively.

2. **Cable Tray** – Max 24 in. (610 mm) wide by max 4 in. (610 mm) deep open-ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (16 gauge) galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. The min annular space between the cable tray and the periphery of opening shall be 0 in. (point contact). The max annular space between the cable tray and the periphery of the opening shall be 2 in. (51 mm) to top of opening and 6 in. (152 mm) to side of opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be min 0 percent to max 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following sizes and sizes of cables may be used:

   A. Max 750 kcmil single-conductor power cables; cross-linked polyethylene (XLPE) insulation.

   B. Max 7C No. 12 AWG (or smaller) multi conductor power and control cables; XLPE insulation, XLPE or polyvinyl chloride (PVC) jacket.

   C. Max 300 pair No. 22 AWG (or smaller) copper conductor with PVC insulation and jacket.

   D. Max No. 18 AWG RG 6/U coaxial cable with PVC insulation and jacket.

   E. Max 4/C No. 2/0 AWG (or smaller) copper or aluminum conductor cables with XLPE or PVC insulation and jacket.

   F. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.

4. **Firestop System** – The firestop system shall consist of the following:

   A. Fill, Void or Cavity Materials* - Caulk, Sealant or Putty — A nom 1 in. (25 mm) thick by 1 in. (25 mm) wide strip of moldable putty or caulk shall be applied to follow the contours of the cable fill on bottom of cable tray and project approx 1/2 in. to 7/8 in. (13 mm to 22 mm) beyond surface of wall on both sides of wall. A min 1 in. (25 mm) thick by 1 in. (25 mm) wide strip of moldable putty or caulk shall be applied to follow the contours of the cable fill on bottom of cable tray and project approx 1/2 in. to 7/8 in. (13 mm to 22 mm) beyond surface of wall on both sides of wall. A min 1/8 in. (3.2 mm) thickness by 2 in. (51 mm) wide strip of putty shall be applied over each layer or row of cables and project approx 1/2 in. to 7/8 in. (13 mm to 22 mm) beyond the outside surface of the intumescent slide sheet on each side of wall assembly. After installation of the intumescent slide sheet, putty pressed into cable fill and against intumescent sheet to fill all openings. Nom 1/2 in. (13 mm) diam “ropes” of putty applied around cable tray side-rail members at their egress from the intumescent sheet (Item 4B) and pressed into the intersections.

   3M COMPANY – CP 25WB+ caulk, FB-3000 WT sealant or MP+ Stix putty
System No. W-L-4044 continued

B. Fill, Void or Cavity Materials* – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv steel sheet backer. Min 2 in. (51 mm) wide sheets cut to frame opening on all sides and overlap a min 2 in. (51 mm) onto gypsum surface. Side pieces of sheets shall be cut to cover annular space to side rails. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 2-1/4 in. (57 mm) long bugle-head steel screws in conjunction with min 3/4 in. (19 mm) steel washers. Fasteners spaced a max 1 in. from each end and each seam of sheets and not to exceed 6 in. (152 mm) OC.

3M COMPANY – CS-195+

C. Steel Z Angle Retainer Plates – Min 16 gauge galv steel retaining plates 4 in. (102 mm) wide overall, 3 in. by 1 in. (76 mm by 25 mm) with 3/8 in. (10 mm) deep break. Plate to be height of opening plus 4 in. Plate to be installed over previously installed intumescent sheet on both sides of opening with min 2-1/4 in. (57 mm) long steel screws in conjunction with min 3/4 in. (19 mm) diam steel washers. Fasteners spaced a max 1 in. (25 mm) from top and bottom of plates and not to exceed 6 in. (152 mm) OC. Plates to extend 2 in. (51 mm) above and below opening. The 3 in. (76 mm) dimension of the plates installed such that the outside edges of plates are flush with intumescent sheet outside edges.

D. Fill, Void or Cavity Materials* – Intumescent Sheet – (Slide Sheet) – Slide sheet cut to width of opening to allow installation into Z retaining angle brackets. Bottom of sheet cut to closely follow the contours of the cable fill within the cable tray. Slide sheet to be of sufficient height to overlap top of opening min 2 in. (51 mm). Sheet to be installed with the galv steel sheet backer exposed.

E. Steel Reinforcement Angle – Min 1/8 in. (3.2 mm) thick 1 in. by 1 in. (25 mm by 25 mm) steel angle. Angle to be placed midway across width of slide sheet. Angle attached to sheet with 1/4 in. (6 mm) long steel sheet metal TEK screws spaced max 4 in. from each end and a max 9 in. (229 mm) O.C. Screws not used on ends over angle retainer plate.

F. Fill, Void or Cavity Materials* – Graphite Seal – (Not Shown) – One layer of 1/2 in. (13 mm) wide by 1/16 in. (1.6 mm) thick adhesive backed graphite intumescent seal positioned under intumescent slide sheet 1/2 in. (13 mm) from top edge of slide sheet.

3M COMPANY – E-FIS or Ultra GS seal

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400 or V400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Min 3-1/2 in. (89 mm) wide steel studs spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.

   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 720 in.2 (4645 cm²) with a max dimension of 30 in. (762 mm).

   The hourly F Rating for the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T Rating for the firestop system is 0 and 1/2 hr for 1 and 2 hr rated assemblies, respectively.

2. **Cable Tray** – Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.47 mm) galv steel with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC or max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed from 0.060 in. (1.52 mm) thick aluminum with nom 1 in. (25 mm) diam rungs spaced 9 in. (229 mm) OC. Max two cable trays per opening. The annular space between the cable trays is a min 6 in. (152 mm) to max 18 in. (457 mm). The annular space between the cable trays and the periphery of the opening will be min 0 in. (point contact) to max 18 in. (457 mm). Cable trays to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within the tray. Any combination of the following types and sizes of cables may be used:

   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.

   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.

   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.

   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.

   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.

   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:

   A. **Fill, Void or Cavity Materials** – Putty – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at the bottom corners of opening and extending a min 1 in. (25 mm) in both directions from each corner, flush with both surfaces of wall. Min 5/8 in. (16 mm) thickness of putty installed between bottom of cable tray and bottom of opening on both surfaces of wall. As an option, the putty between the bottom of the cable tray and the bottom of the opening may be replaced by pillows (Item 4B), provided the annular space is such that the pillows can be tightly fitted into the annular space. After installation of pillows and intumescent sheet (Items 4B and 4C), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty on both sides of wall.

   3M COMPANY – **MP+**

   B. **Fill, Void or Cavity Materials** – Pillow – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly packed to fill annular space between the cable trays and periphery of opening and the annular space between the cable trays when two trays are installed within the opening. A min of two rows of pillows to be installed above the top cable tray in opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening except that the top row of pillows in the opening shall be installed with the 6 in. (152 mm) dimension centered in the wall such that the top row is completely covered by the intumescent sheet (Item 4C).

   3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

   C. **Fill, Void or Cavity Materials** – **Intumescent Sheet** – Rigid aluminum foil-faced sheet with galv steel sheet backer. The one piece sheet shall be cut to lap a min of 2 in. (51 mm) onto the wall at the top and sides of the opening on both sides of the wall. Sheet shall be cut to completely lap the top row of pillows above the top cable tray on both sides of the wall. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum wallboard layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with min 1-1/4 in. (32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with fasteners located a max 1 in. (25 mm) from each corner of the sheet.

   3M COMPANY – **Type CS-195+**

*Bearing the UL Classification Mark*
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Min 3-1/2 in. (89 mm) wide steel studs spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 720 in.² (0.47 m²) with a max dimension of 30 in. (762 mm).

   The hourly F and FH Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings for the firestop system are 0 hr and 3/4 hr for 1 hr and 2 hr fire rated assemblies, respectively.

2. **Cable Tray** – Max 12 in. (305 mm) wide by max 1-1/2 in. (38 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.062 in. thick (1.6 mm) aluminum with nom 1 in. (25 mm) wide by 1 in. (25 mm) high rungs spaced 9 in. (229 mm) OC or max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid. Max two cable trays per opening. The annular space between the cable trays shall be min 6 in. (152 mm) to max 12 in. (305 mm). The annular space between the cable trays and the periphery of the opening shall be min 1-1/2 in. (38 mm) to max 20 in. (508 mm). Cable trays to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the open ladder aluminum cable tray based on a max 1-1/2 in. (38 mm) cable loading depth. Aggregate cross-sectional area of cables in welded wire basket cable tray not to exceed 23 percent of the cross-sectional area of the welded wire basket cable tray based on a max 1-1/2 in. (38 mm) cable loading depth. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material** – Putty – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at the bottom corners of opening and extending a min 1 in. (25 mm) in both directions from each corners, flush with both surfaces of wall. Min 5/8 in. (16 mm) thickness of putty installed between bottom of cable tray and bottom of opening and between top of cable tray and bottom of composite sheet on both surfaces of wall. As an option, the putty between the bottom of the cable tray and the...
System No. W-L-4062 continued

bottom of the opening may be replaced by pillows (Item 4B), provided the annular space is such that the pillows can be tightly fitted into the annular space. After installation of pillows and intumescent sheet (Items 4B and 4C), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty on both sides of wall.

3M COMPANY – MP+

B. Fill Void or Cavity Material* – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cable trays and periphery of opening and the annular space between the cable trays when two trays are installed within the opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening except that the top row of pillows in the opening shall be installed with the 6 in. (152 mm) dimension centered in the wall such that the top row is completely covered by the intumescent sheet (Item 4C).

3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

C. Fill, Void or Cavity Materials* – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv steel sheet backer. The one piece sheet shall be cut to lap a min of 2 in. (51 mm) onto the wall at the top and sides of the opening on both sides of the wall. Sheet shall be cut to completely lap the top row of pillows above the top cable tray on both sides of the wall. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with nom 1/4 by 1-1/4 in. (6 by 32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with fasteners located a max 1 in. (25 mm) from each corner of the sheet.

3M COMPANY – Type CS-195+

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Min 3-1/2 in. (89 mm) wide steel studs spaced max 24 in. (610 mm) OC. Additional framing members shall be used to completely frame around opening.
   B. **Gypsum Board** – Thickness, type, number of layers and fasteners as required in the individual Wall and Partition Design. Max area of opening is 720 in.² (0.47 m²) with a max dimension of 30 in. (762 mm).

   The hourly F and FH Ratings for the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable Tray** – Max two cable trays to be installed within the opening. The annular space between the cable trays shall be min 6 in. (152 mm) to max 10 in. (254 mm). The annular space between the cable trays and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 10 in. (254 mm). Cable trays to be rigidly supported on both sides of wall assembly. The following types of the cable trays may be used:
   A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC
   B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. thick (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.
   C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area based on a max 3 in. (76 mm) cable loading depth within the open ladder cable tray. Aggregate cross-sectional area of cables in welded wire basket cable tray not to exceed 23 percent of the cross-sectional area of the welded wire basket cable tray based on a max 1-1/2 in. (38 mm) cable loading depth. Any combination of the following types and sizes of cables may be used:
   A. Max 1/C 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   B. Max 300 pair No. 22 AWG (or smaller) copper conductor telecommunication cables with polyvinyl chloride (PVC) insulation and jacket.
   C. Max 7/C No. 12 AWG copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 4/C No. 2/0 AWG copper or aluminum conductor cables with PVC insulation and jacket.
   E. Max 1-10/125 Fiber Optic (FO) cable with PVC insulation and jacket.
   F. Max No. 18 AWG Type RG coaxial cable with polyvinyl chloride insulation.

4. **Firestop System** – The firestop system shall consist of the following:
   A. **Fill Void or Cavity Material** – **Putty** – Min 1/2 in. (13 mm) thickness of putty formed to a min 1 in. (25 mm) width and applied within annulus at the bottom corners of opening and extending a min 1 in. (25 mm) in both directions from each corners, flush with both surfaces of wall. Min 5/8 in. (16 mm) thickness of putty installed between bottom of cable tray and bottom of opening and between top
of cable tray and bottom of composite sheet on both surfaces of wall. As an option, the putty between the bottom of the cable tray and the bottom of the opening may be replaced by pillows (Item 4B), provided the annular space is such that the pillows can be tightly fitted into the annular space. After installation of pillows and intumescent sheet (Items 4B and 4C), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of putty on both sides of wall.

3M COMPANY – MP+

B. Fill Void or Cavity Material* – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between the cable trays and periphery of opening and the annular space between the cable trays when two trays are installed within the opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening except that the top row of pillows in the opening shall be installed with the 6 in. (152 mm) dimension centered in the wall such that the top row is completely covered by the intumescent sheet (Item 4C).

3M COMPANY – Fire Barrier Pillow or Fire Barrier Self-Locking Pillows

C. Fill, Void or Cavity Materials* – Intumescent Sheet – Rigid aluminum foil-faced sheet with galv steel sheet backer. The one piece sheet shall be cut to lap a min of 2 in. (51 mm) onto the wall at the top and sides of the opening on both sides of the wall. Sheet shall be cut to completely lap the top row of pillows above the top cable tray on both sides of the wall. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to steel framing, through gypsum board layers, with min 1/4 in. (6 mm) diam by 2-1/4 in. (57 mm) long steel screws in conjunction with nom 1/4 by 1-1/4 in. (6 by 32 mm) diam steel washers. Max spacing of fasteners not to exceed 6 in. (152 mm) with fasteners located a max 1 in. (25 mm) from each corner of the sheet.

3M COMPANY – Type CS-195+

*Bearing the UL Classification Mark

1. **Wall Assembly** – The 1 or 2 hr fire rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** – Min 5/8 in. thick gypsum board. Max area of opening is 98-1/2 in.² (635 cm²) with a max dimension of 12-1/8 in. (308 mm) for square devices. Diam of opening is 4-1/2 in. (114 mm) for round devices.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable Tray** – Nom 2 in. (51 mm) wide by 2 in. (51 mm) high welded wire basket cable tray formed from min 0.23 in. (5.8 mm) thick steel wires in the longitudinal direction and 0.19 in. (4.8 mm) wires in the transverse direction. Transverse wires shall be spaced max 4 in. OC. Max one cable tray shall be installed within each firestop device module (Item 4A). The annular space between the cable tray and the periphery of the device shall be min 1/2 in. (13 mm) to max 1-1/2 in. (38 mm). Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – Cable fill within cable tray shall be a nom 2 in. (100% visual fill). If three of more firestop devices (Item 4A) are ganged together, the cable fill may be less than 2 in. Any combination of the following types and sizes of cables may be used:

   A. Max 4 pair No. 24 AWG copper conductor Cat5e or Cat 6 telephone cable with polyvinyl chloride (PVC) insulation and jacket materials.

   B. Max 4 pair No. 23 AWG copper conductor Cat 6 telephone cable with PVC insulation and jacket materials.

4. **Firestop System** – The firestop system shall consist of the following:

   A. **Firestop Device** – A max of six square firestop devices may be ganged together. As an alternate, one round device may be centered in a round opening. Each device consists of a nom 4 by 4 by 10 in. (102 by 102 by 254 mm) or 4 in. (102 mm) diam by 10 in. (254 mm) powder coated steel transit incorporating internal intumescent material, foam plugs and mounting flanges. Firestop device(s) to be installed within opening with ends projecting an equal distance beyond each surface of wall assembly in accordance with the accompanying installation instructions. The annular space between device(s) and periphery of opening shall be a nom 1/16 in. (1.6 mm). Firestop device(s) secured in place by means of fill material (Item 3B) and steel split mounting flanges sized to accommodate the firestop device. Steel split mounting flanges installed on both sides of wall after installation of fill material, and secured together with supplied steel set screws. Nom 1 in. (25 mm) thick pre-cut foam plugs sized to accommodate the through penetrant and installed flush with each end of device on both sides of wall assembly. The foam plug in one or both ends of the device is optional except when L Rating is required (See Item 3B).

   B. **Fill, Void or Cavity Materials** – **Putty or Caulk** – Min 1/8 in. (3 mm) bead of fill material shall be applied at interface of gypsum board and firestop devices immediately prior to the installation of the mounting flanges. If three or less devices (Item 3A) are ganged together, the fill material may be optional. As an option, foam plugs may be recessed into device and the recess filled with putty or caulk flush with the ends of the device. As an option to attain L Ratings, foam plugs of firestop device modules may be recessed 1 in. (25 mm) into device and the recess filled with putty or caulk flush with the ends of the device. When annulus around firestop device module(s) is filled with putty or caulk and when both ends of each firestop device module are filled with a nominal 1/8 in. (3.2 mm) depth of putty or caulk the following L Ratings apply:

<table>

3M COMPANY – Moldable Putty+, CP 25WB+, IC 15WB+, 3000 WT

*Bearing the UL Classification Mark*
1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members to be installed in stud cavity containing cable tray to form a rectangular box around the opening.
   B. **Gypsum Board** – One or two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max area of opening is 1080 sq in. (0.7 m²) with a max dimension of 36 in. (914 mm).

The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable Rack** – Max 20 in. (508mm) wide by 2 in. (51 mm) deep steel cable rack formed from min 1/4 in. (6 mm) thick steel with min 1 in. (25 mm) wide rungs spaced max 9 in. (229 mm) OC. Width of cable rack to be at least 4 in. (102 mm) less than width of wall opening. When installed in a U300 Series (wood stud) wall assembly, the annular space between the cable rack and the bottom of the opening shall be min 1 in. (25 mm). When installed in a U400 or V400 Series (steel stud) wall assembly, the annular space between the cable rack and the bottom of the opening shall be min 0 in. (point contact). Side rails of cable rack to be min 2 in. (51 mm) to max 13 in. (330 mm) from side edges of wall opening. Cable rack to be rigidly supported on both sides of wall assembly.

2A. **Cable Tray** – (Not Shown) – As an alternate to the steel cable rack (Item 2), one of the following types of cable tray may be used:
   A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.
   B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.
   C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 4 by 4 in. (51 by 102 mm) grid.

Width of cable tray to be at least 4 in. (102 mm) less than width of wall opening. The annular space between the cable tray and the bottom of the opening shall be min 2 in. (51 mm). Side rails of cable tray to be min 2 in. (51 mm) to max 13 in. (330 mm) from side edges of wall opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – When cable rack (Item 2) is used, aggregate cross-sectional area of cables in opening to be max 25 percent of the cross-sectional area of the opening based on a max 15 in. (381 mm) deep cable loading depth on the cable rack. When cable tray (Item 2A) is used, the aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth in the cable tray. Any combination of the following types and sizes of cables may be used:
   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.
   B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
C. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+
D. Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+
E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.
F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.
G. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
H. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.
I. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
J. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.
K. Max 62.5/125 micron fiber optic cable with having a min Riser rating.
L. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.

4. Firestop System – The firestop system shall consist of the following:
   A. **Fill, Void or Cavity Material** – Putty – Nom 1/8 in. (3 mm) thick by 4 in. (102 mm) band of putty installed around cable bundle at mid-depth of wall. Nom 1/2 in. (13 mm) rope of putty used to fill any gaps or voids around perimeter of opening and around cable fill
   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – MP+ or Cable Wrap Putty
   B. **Fill, Void or Cavity Material** – Pillows – Pillows installed length-wise through wall and tightly-packed to fill opening between the penetrants and the periphery of the opening. The pillows may be cut to decrease their width and repaired with min 0.002 in. (0.05mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13mm).
   3M COMPANY
   3M FIRE PROTECTION PRODUCTS – Fire Barrier Pillows or Fire Barrier Self-Locking Pillows

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   
   **A. Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members to be installed in stud cavity containing cable tray to form a rectangular box around the opening.
   
   **B. Gypsum Board** – One or two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max area of opening is 720 sq in. (4645 cm²) with a max dimension of 30 in. (762 mm). The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Cable Rack** – Max 18 in. (457 mm) wide by 2 in. (51 mm) deep steel cable rack formed from min 1/4 in. (6 mm) thick steel with min 1 in. (25 mm) wide rungs spaced max 9 in. (229 mm) OC. When installed in a U300 Series (wood stud) wall assembly, the annular space between the cable rack and the bottom of the opening shall be min 1 in. (25 mm). When installed in a U400, V400 or W400 Series (steel stud) wall assembly, the annular space between the cable rack and the bottom of the opening shall be min 0 in. (point contact). Side rails of cable rack to be min 3 in. (76 mm) to max 9 in. (229 mm) from side edges of wall opening. Cable rack to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in opening to be max 35 percent of the cross-sectional area of the opening based on a max 14 in. (356 mm) deep cable loading depth on the cable rack. Any combination of the following types and sizes of cables may be used:
   
   **A.** Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.
   
   **B.** Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.
   
   **C.** Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+.
   
   **D.** Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+.
   
   **E.** Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.
   
   **F.** Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.
   
   **G.** Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.
   
   **H.** Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.
   
   **I.** Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.
   
   **J.** Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.
   
   **K.** Max 62.5/125 micron fiber optic cable with having a min Riser rating.
   
   **L.** Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.
4. **Firestop System** – The firestop system shall consist of the following:

A. **Fill, Void or Cavity Material**
   - Putty – Nom 1/8 in. (3 mm) thick by 4 in. (102 mm) putty pads forming a band of putty installed around cable bundle at mid-depth of wall.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – MPP+ Moldable Putty Pads

B. **Fill, Void or Cavity Material**
   - Pillows – Pillows installed within annular space with long dimension parallel to plane of wall. Pillow tightly-packed to fill opening between the penetrants and the periphery of the opening. The pillows may be cut to decrease their width and repaired with min 0.002 in. (0.05 mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13 mm).

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – Fire Barrier Pillows or Fire Barrier Self-Locking Pillows

C. **Fill, Void or Cavity Material**
   - Putty – Nom 1 in. (25 mm) rope of putty applied around periphery of cable bundle/cable rack to fill any gaps or voids, at both sides of wall. In addition, nom 1 in. (25 mm) thickness of putty installed to the maximum extent possible to fill any voids between and around pillows and cables on both sides of wall.

   **3M COMPANY**
   **3M FIRE PROTECTION PRODUCTS** – MP+ Moldable Putty

D. **Steel Cover Plate** – Each plate consists of nom 0.034 in. (1 mm, 22 gauge) thick steel sheet. Plate cut to an overall rectangular size such that it overlaps the wall around the periphery of the opening by min 2 in. (51 mm). Inside dimensions of plate are cut to fit the contour of the penetrants within the opening with a max clearance between penetrant and plate of 1 in. (25 mm). Two halves of plate are installed over the penetrant and opening and secured to wall framing with No. 12 by 2 in. (51 mm) long S type steel screws and min 3/4 in. (19 mm) diam washers with one fastener at each corner and butt joint and intermediate fasteners spaced max 7 in. (178 mm) OC around periphery of sheet. Additional 2 in. (51 mm) wide strips of steel installed over seam of steel cover plate and secured to steel cover plate by means of nom 1/8 in. (3 mm) diam by 1/2 in. (13 mm) long steel sheet metal screws spaced a max 3 in. (76 mm) OC. Sheet applied to both sides of wall.

1. **Wall Assembly** – The 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400, V400 or W400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs** – Wall framing shall consist of min 3-1/2 in. (89 mm) wide steel studs spaced max 24 in. (610 mm) OC. Opening is to be completely framed with additional studs.
   B. **Gypsum Board** – Min two layers of 5/8 in. gypsum board attached to studs with fasteners, as specified in the individual U400, V400 or W400 Series design. The area of the opening shall be max 512 in.² (3303 cm²) with a max dimension of 32 in. (813 mm).

2. **Cable Tray** – Max two 24 in. (610 mm) wide by max 6 in. (151 mm) deep open-ladder cable tray with channel-shaped side rails formed of 0.065 in. (1.651 mm) to 0.10 in. (2.54 mm) thick aluminum or min 0.060 in. (1.65 mm) thick galv steel. The annular space between the cable trays shall be min 2 in. (51 mm). The annular space between the cable tray and the periphery of the opening shall be min 0 in. (point contact) to max 2 in. (51 mm). Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be max 45 percent of the cross-sectional area of the cable tray based on a max 5 in. (127 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of copper conductor or fiber optic cables may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   E. Max 3/C No. 2/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. **Through Penetrating Product** – Any cables, Armorced Cable or Metal Clad Cable currently Classified under the Through Penetrating Product category. See Through Penetrating Product (XHLY) category in the Fire Resistance Directory for names of manufacturers.

4. **Fill, Void or Cavity Material** – Fill – Min 6 in. (152 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall. Foam to be injected into the interstices between all cables. An additional 1/2 in. (13 mm) bead of foam shall be applied at the point contact locations.
   3M COMPANY – Fire Barrier Rated Foam, FIP 1-Step

System No. W-L-4084
June 26, 2014

ANSI/UL1479 (ASTM E814)
F Ratings – 1 and 2 Hr (See Item 1)
T Ratings – 0 and 1/2 Hr (See Item 1)

CAN/ULC S115
F Ratings – 1 and 2 Hr (See Item 1)
FT Ratings – 0 and 1/2 Hr (See Item 1)
FH Ratings – 1 and 2 Hr (See Item 1)
FTH Ratings – 0 and 1/2 Hr (See Item 1)

1. **Wall Assembly** – The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400, V400 or W400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** – Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced max 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional framing members to be installed in stud cavity containing cable tray to form a rectangular box around the opening.

   B. **Gypsum Board** – One or two layers of nom 5/8 in. (16 mm) thick gypsum board, as specified in the individual Wall and Partition Design. Max area of opening is 560 sq in. (0.36 m2) with a max dimension of 28 in. (711 mm).

   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed. The hourly T, FT and FTH Ratings are 0 and 1/2 hr for 1 and 2 hr rated assemblies, respectively.

2. **Cable Rack** – Max 20 in. (508mm) wide by 2 in. (51 mm) deep steel cable rack formed from min 1/4 in. (6 mm) thick steel with min 1 in. (25 m) wide rungs spaced max 9 in. (229 mm) OC. When installed in a U300 Series (wood stud) wall assembly, the annular space between the cable rack and the bottom of the opening shall be min 1 in. (25 mm). When installed in a U400, V400 or W400 Series (steel stud) wall assembly, the annular space between the cable rack and the bottom of the opening shall be min 0 in. (point contact) to max 4 in. (102 mm). Side rails of cable rack to be min 0 in. (point contact) to max 4 in. (102 mm) from side edges of wall opening. Cable rack to be rigidly supported on both sides of wall assembly.

2A. **Cable Tray** – (Not Shown) - As an alternate to the steel cable rack (Item 2), one of the following types of cable tray may be used:

   A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.

   B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.

   C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid.

   The annular space between the cable tray and the bottom of the opening shall be min 0 in. (point contact) to max 4 in. (102 mm). Side rails of cable tray to be min 0 in. (point contact) to max 4 in. (102 mm) from side edges of wall opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. **Cables** – When cable rack (Item 2) is used, aggregate cross-sectional area of cables in opening to be max 40 percent of the cross-sectional area of the opening based on a max 15 in. (381 mm) deep cable loading depth on the cable rack. When cable tray (Item 2A) is used, the aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth in the cable tray. Any combination of the following types and sizes of cables may be used:

   A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.

   B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.

   C. Max three copper conductors (with ground) No. 12 AWG steel Armorced Cable+.

   D. Max three copper conductors (with ground) No. 2 AWG Metal Clad Cable+.
E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.

F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.

G. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.

H. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.

I. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.

J. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.

K. Max 62.5/125 micron fiber optic cable with having a min Riser rating

L. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.

4. **Fill, Void or Cavity Material* – Foam** – Min 4-3/4 in. (121 mm) or min 6 in. (152 mm) thickness of fill material for 1 and 2 hr rated walls, respectively, applied within the annulus, flush with both surfaces of wall. Foam to be injected into the interstices between all cables. An additional 1/2 in. (13 mm) bead of foam shall be applied at the point contact locations.

2A. Cable Tray – (Not Shown) — As an alternate to the steel cable rack (Item 2), one of the following types of cable tray may be used:

A. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.058 in. thick (1.5 mm) galv steel with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.

B. Max 24 in. (610 mm) wide by max 4 in. (102 mm) deep open ladder cable tray with channel-shaped side rails formed of min 0.060 in. thick (1.5 mm) aluminum with nom 1 in. (25 mm) diam rung spaced 9 in. (229 mm) OC.

C. Max 8-3/4 in. (222 mm) wide by max 2-1/2 in. (64 mm) deep welded wire basket cable tray formed from min 0.198 in. (5 mm) thick steel and having a max 2 by 4 in. (51 by 102 mm) grid.

The annular space between the cable tray and the bottom of the opening shall be min 0 in. (point contact) to max 4 in. (102 mm). Side rails of cable tray to be min 0 in. (point contact) to max 4 in. (102 mm) from side edges of wall opening. Cable tray to be rigidly supported on both sides of wall assembly.

3. Cables – When cable rack (Item 2) is used, aggregate cross-sectional area of cables in opening to be max 40 percent of the cross-sectional area of the opening based on a max 15 in. (381 mm) deep cable loading depth on the cable rack. When cable tray (Item 2A) is used, the aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth in the cable tray. Any combination of the following types and sizes of cables may be used:

A. Max 300 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with PVC insulation and jacket materials.

B. Max 1/C No. 3/0 AWG copper conductor cable with PVC insulation and jacket materials.

C. Max three copper conductors (with ground) No. 12 AWG steel Armored Cable+

D. Max three copper conductor (with ground) No. 2 AWG Metal Clad Cable+

E. Max 1/C No. 750 kcmil (or smaller) copper conductor power cable with cross-linked polyethylene (XLPE) insulation and fabric jacket materials.

F. Max 3/C (with ground) No. 4/0 AWG (or smaller) copper or aluminum conductor SER cable with XLPE or PVC insulation and jacket.

G. Max 4/C No. 18 AWG (or smaller) copper conductor thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials.

H. Max four pair No. 22 AWG (or smaller) copper conductor Category 5 or Category 6 data cable with PVC insulation and jacket materials.

I. Max 3/C (with ground) No. 10 AWG (or smaller) nonmetallic sheathed (Romex) cable with PVC insulation and jacket materials.

J. Max twelve core No. 24 AWG shielded coaxial cable with high density polyethylene foam insulation and fluorinated ethylene (FE) or PVC jacket.

K. Max 62.5/125 micron fiber optic cable with having a min Riser rating.

L. Max 7/C No. 12 AWG (or smaller) copper conductor control cable with PVC insulation and jacket materials.

4. Firestop System – The firestop system shall consist of the following:

A. Fill, Void or Cavity Material* – Pillows – Max 9 in. (229 mm) long by 6 in. (152 mm) wide by 2 and 3 in. (51 and 76 mm) thick plastic covered pillows tightly-packed to fill annular space between penetrants and periphery of opening. Pillows installed with 9 in. (229 mm) dimension projecting through wall and centered within the opening. The pillows may be cut to decrease their width and repaired with min 0.002 in. (0.05 mm) thick polyester tape with acrylic adhesive. The tape must overlap onto the existing pillow a min of 1/2 in. (13 mm).

3M COMPANY 3M FIRE PROTECTION PRODUCTS – Fire Barrier Pillows or Fire Barrier Self-Locking Pillows

B. Fill, Void or Cavity Material* – Foam – Foam to be injected into the interstices between and around the periphery of all cables. After installation of pillows (Item 4A), all voids within the opening shall be filled with a min 1 in. (25 mm) thickness of foam. In addition, a 1/2 in. (13 mm) bead of foam shall be applied at all point contact locations at both sides of wall.

3M COMPANY 3M FIRE PROTECTION PRODUCTS – Fire Barrier Rated Foam, FIP 1-Step

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.
1. Wall Assembly — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400, V400 or W400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. Studs — Wall framing to consist of wood studs or channel shaped steel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional studs shall be used to completely frame the opening.
   B. Gypsum Board* — Min two layers of 5/8 in. (16 mm) gypsum board attached to studs with fasteners, as specified in the individual Wall or Partition Series design. Max area of opening is 1080 in² (6968 cm²) with a max dimension of 36 in. (914 mm).
   The hourly F and FH Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. Cable Trays* — Max two 24 in. (610 mm) wide by max 6 in. (151 mm) deep open-ladder cable tray with channel-shaped side rails formed of 0.065 in. (1.651 mm) to 0.10 in. (2.54 mm) thick aluminum or min 0.060 in. (1.65 mm) thick galv steel. The annular space between the cable trays shall be min 2 in. (51 mm). The annular space between the cable tray and the periphery of the opening shall be min 2 in. (51 mm). Cable trays to be rigidly supported on both sides of wall assembly.

3. Cables — Aggregate cross-sectional area of cables in cable tray to be max 45 percent of the cross-sectional area of the cable tray based on a max 5 in. (127 mm) cable loading depth within the cable tray. Any combination of the following types and sizes of copper conductor or fiber optic cables may be used:
   A. Max 200 pair No. 22 AWG (or smaller) copper conductor with polyvinyl chloride (PVC) insulation and jacketing material.
   B. Max 1/C No. 750 kcmil (or smaller) copper conductor cable with cross-linked polyethylene (XLPE) jacket.
   C. Max 7/C No. 12 AWG (or smaller) copper conductor power and control cables with XLPE or PVC insulation with XLPE or PVC jacket.
   D. Max 3/C No. 4/0 AWG (or smaller) copper or aluminum conductor SER cables with PVC or XLPE insulation and jacket.
   E. Max 3/C No. 3/0 AWG (or smaller) copper conductor PVC jacketed aluminum clad or steel clad TECK 90 cable.
   F. Max 110/125 fiber optic (F.O.) cable with PVC insulation and jacket.
   G. Max 3/C with ground No. 8 AWG (or smaller) copper conductor NM cable with PVC insulation and jacket.
   H. RG/U coaxial cable with fluorinated ethylene (FE) or PVC insulation and jacket.
   I. Max 4 pair No. 24 AWG (or smaller) copper conductor data cable with Hylar jacket and insulation.
   J. Max three conductor No. 12 AWG (or smaller) MC (BX) copper cable with polyvinyl chloride insulation and jacket materials.
   K. Through Penetrating Product* — Any cables, Armored Cable+ or Metal Clad Cable+ currently classified under the Through Penetrating Product category. See Through Penetrating Product (XHLY) category in the Fire Resistance Directory for names of manufacturers.
4. Firestop System — The firestop system shall consist of the following:

   A. Fill, Void or Cavity Material* — Blocks installed with 5 in. (127 mm) dimension projecting through opening and centered in wall. Blocks to be firmly packed to fill the opening area between and around the penetrants. Blocks can be cut to fit around penetrants and within smaller annular spaces.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — 3M™ Fire Barrier Block B258, 3M™ Fire Barrier Plank PK39

   B. Fill, Void or Cavity Material* — Foam — Fill material to be forced between blocks and periphery of opening to the max extent possible. Fill material to be injected in-between blocks and penetrants to the full depth of the blocks, as well as in any visible voids/ openings between blocks (Item 4A). In addition, foam shall be injected to the maximum extent possible within the interstices between all cables in the cable trays.

   3M COMPANY 3M FIRE PROTECTION PRODUCTS — Fire Barrier Rated Foam, FIP 1-Step
