3M™ DI-NOC™ Architectural Finishes

NB: for applications in the UK & Ireland - those products in the catalogue with sun symbols: ☼✹ are suitable for exterior application. For applications outside the UK, please check locally for warranty information.

	Suitable for external applications
	Suitable for external applications, but not recommended for application to PVC coated materials, e.g. plastisol
	Not recommended for use on compound curves
	Not recommended for butt joint applications
	New design
	Also available as a non-PVC version (E-Series).
	A product code ending in “H” indicates horizontal grain direction
	Pattern is large scale, view full pattern width image at 3M.com/AMD
	Available in EX series. See Page 43 for visual appearance

Explore the creativity.

With the addition of 153 new patterns that incorporate the latest trends, 3M™ DI-NOC™ Architectural Finishes are now available in more than 800* different designs, enabling almost infinite creativity. Our diverse selection of unique new products utilizes the latest technologies available, including *Effect*, which changes color depending on the viewing angle, and *Advanced Metallic*, which gives the appearance of woven metal. In addition, a new range of patterns has been added to the portfolio enabling application to exterior surfaces. Our rich assortment of finishes offers the warmth of wood grain, the texture of traditional Japanese washi paper, abstract designs inspired by nature, and many other interior and exterior design possibilities. Experience greater design freedom with DI-NOC Architectural Finishes.

DI-NOC Series Selection

It is important to consider the intended use when selecting DI-NOC patterns. Please refer to the most up-to-date 3M™ DI-NOC™ Architectural Finishes Technical Data Sheet and Installation Guide, which can be found by visiting 3MArchitecturalMarkets.com. You may also contact your 3M Sales Representative for additional information.

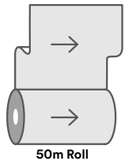

Horizontal Print Series

3M™ DI-NOC™ Architectural Finishes Fine Wood (FW) and Wood Grain (WG) Series include horizontal pattern options, which simplify the use of horizontal wood grains by changing the print direction.

Printing direction = Direction of the wood grain length

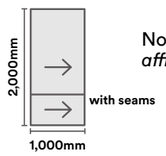

Vertical Print Series
Wood grain patterns of vertical print series:
horizontal to the length

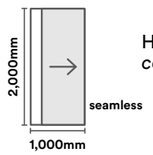

Horizontal Print Series
Horizontal print series wood grain patterns:
vertical to the length

Affixing a Horizontal Pattern Film on Door

Normal wood grain patterns:
affix twice for one door

Horizontal print series wood grain patterns:
complete by affixing once

The following chart reflects the horizontal patterns with the corresponding vertical match.

Horizontal	Vertical
FW-606H	FW-1134
FW-607H	FW-1133
FW-608H	FW-1123
FW-609H	FW-1113
FW-1039H	FW-1124
FW-1040H	FW-1137
FW-1121H	FW-1022
FW-1130H	FW-1129
FW-1136H	FW-1135
FW-1139H	FW-1138
FW-1145H	FW-1143
WG-1392H	WG-2705

Horizontal Print Series products have “H” at the end of the sample product numbers.

Product Characteristics

The values in these tables are typical, and are based on test data deemed reliable but are not warranted.

Characteristic		Value
Material	**Film**	Vinyl for most patterns; Polyolefin for E-series; Polyester for select patterns such as WH-111
	Adhesive	Pressure-sensitive acrylic, permanent
	Release Liner	Silicone-coated poly paper
Thickness	**Film + Adhesive**	8 mils (200 microns) nominal, not including release liner; Some designs vary slightly in thickness due to embossing
	Release Liner	6.2 mils (157 microns)
Roll Size	**Standard and E-Series**	48 in. x 164 ft. (1,220mm x 50m)
	AR, WG-GN, VM, ET	48 in. x 82 ft. (1220mm x 25m)
Weight		55 lbs. (25kg) (approx.) for a 164 ft. (50m) roll

Product Performance

The values in these tables are typical, and are based on test data deemed reliable but are not warranted.

Characteristic	Evaluation	Results
Dimensional Stability*	4 in. x 4 in. (100mm x 100mm) crosscut in film, after 2 days at room temperature	Largest gap: < 0.01 in. (0.3mm)
Thermal Cycle Resistance*	Cycled between -22°F and 150°F (-30°C and 65°C) for 12 days	No delamination or visible change
Moisture Resistance*	Aged at 104°F (40°C), 95% humidity for 30 days	No delamination or visible change
Cold Impact Resistance*	2 lb. (907g) weight dropped from 5 in. (12.7cm) height, at 32°F (0°C) using a Gardner Impact Tester	No cracks in film
Abrasion Resistance	Taber® CS-17 Abrasion wheel: 1kg loading weight, 7,000 cycles	No wear-through of surface finish
Fire Resistance	When used in Interior Applications as defined by NFPA 101 “Life Safety Code”, Test Method ASTM E84	Most Products have Class A
Industry-Specific Testing	International Maritime Organization certification, Intertek Firedoor, USCG	Contact 3M for certification details

*Product applied to an aluminum plate

Stain Resistance

Contaminant was in contact with the film surface for 24 hours and then removed using water or mild detergent. Results may vary.

Contaminant	Results
Coffee	●
Tea	○
Cola	●
Milk	●
Red Wine	●
Ketchup	●
Soy Sauce	●
Cooking Oil	●
Vinegar	●
Mustard	●
Crayon	○
Shoe Polish	◒
Betadine Iodine	●
Soap Solution (1%)	●
Ammonia Solution (10%)	●
Citrate Solution (10%)	●
Ethyl Alcohol (50%)	●

● = Removed with water
○ = Removed with mild detergent
◒ = A little stain remained

Cleaning and Maintenance

Regular cleaning will help maintain the Product's appearance. Use only clean, nick-free tools and wipe gently. Do not use ammonia, chlorine or organic-based cleaning products, polishing or cleaning compounds, sponges, brushes or electric polishing equipment.

Problem	Solution
Dust and Grit	Wipe with a soft, damp cloth.
Soiled (but not gritty)	Clean using water and a soft cloth.
Heavily Soiled	Clean first using a solution of mild liquid detergent and water, then use clear water. Wipe gently with a soft cloth.

Application and Removal Guidelines

The values in these tables are typical, and are based on test data deemed reliable but are not warranted. See the 3M™ DI-NOC™ Architectural Finishes Installation Guide for additional information.

Characteristic	Value
Application Surface Type	Smooth, hard, non-porous (sealed) material
Application Location	Interior
Application Temperature	54–100°F (12–38°C) air and application surface
Application Method	Dry application
High Humidity Environments	Products are not recommended for Interior Applications where condensation consistently occurs.
Product Removal	Heat at 176–212°F (80–100°C)

Resistance to Solvents, Cleaners and other Chemicals

Film was applied to an aluminum plate, left for 72 hours, then immersed in the following chemicals:

Classification	Solvent	Immersion Time	Result
Water	Water	24 hours	No visible change
Acid	Hydrogen Peroxide	72 hours	No visible change
Alcohol	Ethanol	24 hours	No visible change
	Isopropyl Alcohol	72 hours	
Cleaners, Disinfectants and Other Chemicals	Clorox® Bleach — 50% bleach/50% water	72 hours	No visible change
	Ecolab® TB Disinfectant Cleaner		
	Formula 409®		
	Lysol®		
	3M™ Quat Disinfectant #5 — 3M		
	3M™ Sharpshooter™ — 3M		
	Virox®		

Refer to the 3M™ DI-NOC™ Technical Data Sheet for additional details.

Adhesion Compatibility with Application Surfaces

The following table contains peel adhesion information for the Product peeled from various surfaces. A number of surfaces have acceptable adhesion without the use of adhesion promoter. Examples of increased adhesion with adhesion promoters on certain surfaces is presented. Surfaces vary widely, so adhesion should be assessed for each customer substrate. Some surfaces are porous and must be sealed before application of DI-NOC to prevent outgassing of the surface over time.

Test specimens were applied to the substrate and conditioned at 68°F (20°C) for 48 hours, then peel tested at 180° at a tensile speed of 12 in./min. (300mm/min.).

		Adhesion Promoter: lb./in. (N/25mm)		
Substrate	Application Surface	No Adhesion Promoter	WP-2000* (water-based)	3M™ Tape Primer 94 (solvent-based)
Wood	MDF (with sealer)	●[3]	●	●
	Painted MDF	●	●	●
Boards	Gypsum Board (with skim coat and sealer)	●[3]	●	●
Metals	Aluminum	●	●	●
	Anodized Aluminum	●	●	●
	Stainless Steel	●	●	●
Glass	Glass	●	●	●
Plastics[1]	ABS	●	●	●
	Acrylic	●	●	●
	Polyester (PETG)	●	●	●
	Polypropylene	○	●	●
	Polyethylene	○	●	○
	Polycarbonate	●	●	●
	DI-NOC Film	●[2]	●	●

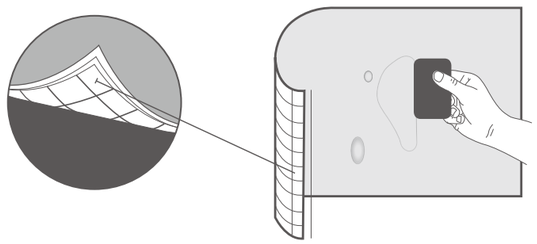

*WP-2000 undiluted for testing. Adhesion promoter may add surface texture. Examine applied DI-NOC pattern for acceptance of visual appearance.

● = Acceptable adhesion
○ = Fails in adhesion

1 Bubbles may appear under film due to outgassing if plastic substrate is not fully cured before application.
2 If DI-NOC is wrapped and overlapped around edges, use of an adhesion promoter is highly recommended due to additional stress from wrapping DI-NOC.
3 Sealer was wiped with Isopropyl alcohol to improve adhesion. Adhesion was tested using a spring scale per the 3M™ DI-NOC™ Architectural Finishes Installation Guide and passed at 800–1,000 g/in.

Comply™ Adhesive Technology

Comply Adhesive has air-release channels that allow trapped air bubbles to escape during application. Dry application only.

- For interior applications requiring maximum resistance to fading from UV exposure
- For interior applications requiring maximum resistance to UV fading, not recommended for use on PVC-coated steel panels
- Not recommended for use on compound curved surfaces
- Not recommended for butt joint applications
- NEW New design
- Available in E-series
- H A product number ending in “H” indicates horizontal grain direction
- Pattern is large scale; view full pattern width image at 3M.com/AMD
- Available in EX Series. See page 43 for visual appearance.

☀ For interior applications requiring maximum resistance to fading from UV exposure

☼ For interior applications requiring maximum resistance to UV fading, not recommended for use on PVC-coated steel panels

Ⓘ Not recommended for use on compound curved surfaces

Ⓦ Not recommended for butt joint applications

NEW New design

Ⓔ Available in E-series

H A product number ending in “H” indicates horizontal grain direction

📷 Pattern is large scale; view full pattern width image at 3M.com/AMD

Available in EX Series. See page 43 for visual appearance.
