You choose it for speed. Now it’s more esthetic, too.

Posterior restorations are challenging—which is why bulk fill composites that simplify and speed up the procedure have become so popular. However, until now, the faster, easier placement of bulk fill has been at the sacrifice of esthetics. So, as a global leader in esthetic and restorative technologies, we went back to our experts for a solution you’re sure to love: 3M™ Filtek™ One Bulk Fill Restorative.

Designed for the posterior, its unique optical properties and improved opacity give you the simplicity of one-step placement—up to 5 mm—without compromising esthetic results.

**Smart Contrast Ratio Management increases opacity without sacrificing depth of cure**

Further development of 3M nanotechnology allows us to manage opacity and depth of cure in a smarter way. With our unique Smart Contrast Ratio Management technology, we’ve increased opacity without reducing depth of cure.

In its cured state, Filtek One Bulk Fill Restorative has a higher opacity than 3M™ Filtek™ Bulk Fill Posterior Restorative, resulting in improved esthetics.

---

**Did you know?**

Contrast Ratio is the measurement of the translucency or opacity of the material.

---

### 3M™ Filtek™ One Bulk Fill Restorative Features

- Fast and easy one-step placement
- Increased opacity for improved esthetics
- Stress relief to enable up to 5 mm depth of cure
- Excellent adaptation
- No need for layering or expensive dispensing devices
- Excellent handling and sculptability
- 3M’s true nanotechnology provides superior wear resistance and excellent polish retention
- High radiopacity
- Unique tip design for easier access to deep cavities
- Available in 5 shades

---

**Contrast Ratio**

*The contrast ratio is the average of all shades.*
You’ll like that it’s simple. They’ll be happy that it looks good, too.

More innovative technologies behind 3M™ Filtek™ One Bulk Fill Restorative

Innovative AUDMA and AFM monomers
Reduces shrinkage and relieves stress to allow bulk fill placement up to 5 mm.

Aromatic urethane dimethacrylate (AUDMA) helps reduce the amount of shrinkage and stress that occurs during polymerization.

Addition-fragmentation monomer (AFM) relieves stress during polymerization.

3M’s TRUE nanofiller technology
Provides superior wear resistance and excellent polish retention.
