**3M™ Advanced Metal Matrix Composite**

**Introduction**

3M™ Advanced Metal Matrix Composite (AMMC) is an Aluminum-Boron Carbide ($\text{B}_4\text{C}$) Neutron Absorber with an integral aluminum cladding. This highly dense MMC has been developed by Ceradyne Canada ULC, a 3M company, guided by principles and processes of its leading Quality Assurance System. This next-generation neutron absorber differs from 3M™ Neutron Absorber Composites (formerly known as Boral® Composites) with its excellent clad-to-core bonding, manufacturing processes and minimal porosity (see Table 1). Water absorption observed with AMMC is dramatically lower than the formerly named Boral composites. This product has been developed to be a highly effective neutron absorber for use in any fresh or spent fuel applications. It meets the key desired characteristics of an efficient neutron absorber by:

- High $^{10}\text{B}$ areal density
- High thermal conductivity
- Excellent clad-to-core-bonding
- Very low porosity

With production entirely at Ceradyne Canada’s facility, lead times and minimum order quantities can accommodate most customer needs.

The superior clad-to-core bonding of 3M AMMC is explained by the absence of large open porosity (black spots in Figure 3) at the clad-core interface.
Figure 4 illustrates water absorption in 3M™ Advanced Metal Matrix Composite (AMMC) as compared to the formerly named Boral® Composite. Tests were based on ASTM B311. Samples were taken from standard production runs of both materials. Samples tested represent similar performance requirements. All samples were subjected to identical test conditions. The Boral composite samples’ water absorption ranged between 1.6% wt. to 2.2% wt. over the duration of the test. The 3M AMMC showed no weight% gain. The weight accuracy during the test was ±0.001 g.

Product Storage, Handling & Safety

Storage: Packages should be stored in a dry area with good ventilation to ensure stabilization of the packages. Temperature and humidity variations within the warehouse should be kept to a minimum to avoid staining due to condensation between plates.

Handling: Keep product flat to avoid damages.

Product Information

Product is manufactured and sold by Ceradyne Canada ULC, a 3M company.

Warranty, Limited Remedy, and Disclaimer: Ceradyne Canada warrants that each Ceradyne Canada product meets the applicable Ceradyne Canada product specification at the time Ceradyne Canada ships the product. CERADYNE CANADA MAKES NO OTHER EXPRESS OR IMPLIED WARRANTIES OR CONDITIONS, INCLUDING ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. If a Ceradyne Canada product does not conform to this warranty, the sole and exclusive remedy is, at Ceradyne Canada’s option, replacement of the Ceradyne Canada product or refund of the purchase price. User is solely responsible for evaluating the Ceradyne Canada product and determining whether it is fit for a particular purpose or application.

Limitation of Liability: Except to the extent prohibited by law, Ceradyne Canada will not be liable for any loss or damage arising from or related to the Ceradyne Canada product, whether direct, indirect, special, incidental, or consequential, regardless of the legal or equitable theory asserted.

Technical Information: Technical information, recommendations, and other statements contained in this document or provided by Ceradyne Canada personnel are based on tests or experience that Ceradyne Canada believes are reliable, but the accuracy or completeness of such information is not guaranteed.
