## ELECTRONIC HEARING PROTECTORS

### RangeGuard™

Entry-level active hearing protector. Low-profile cups with cut-outs are ideal for use with rifles and shotguns. Redesigned headset better fits small adults and women.

### Tactical 100

Active hearing protector with digital electronics and low-profile cups. Variable Suppression Time reduces echoes — a good low-cost choice for indoor/outdoor shooters.

### Tactical 300

Active hearing protector with digital electronics. Dynamic Suppression Time optimizes protection. Clear Voice Tracking improves speech intelligibility. Medium-profile cups with cut-outs are ideal for use with rifles and shotguns. Excellent for indoor/outdoor competition shooters.

### Tactical 500

Same features and benefits as Tactical 300, plus a higher NRR (26) and Bluetooth® connectivity, allowing users to sync with mobile devices, stream entertainment and accept calls.

**Suppression Time:** The period after a gunshot when the hearing protector disables the microphones to protect the wearer.

**Variable Suppression Time:** Feature that allows the user to adjust suppression time (short, medium or long) in tandem with the volume.

**Dynamic Suppression Time:** Technology that measures gunshot energy and echoes, then adjusts suppression time accordingly for optimized comfort and communication.

**Adaptive Frequency Response:** Noise-filtering technology that responds to increasing environmental noise by adjusting filters around the voice band to remove high- and low-frequency noise.

**Clear Voice Tracking:** Technology that identifies voices in the wearer’s environment and increases noise filtration as necessary, while preserving voices for clearer communication.

**Safe Volume Technology:** Feature that measures the wearer’s audio exposure over a day and adjusts the volume level only as necessary to keep the audio dosage below acceptable limits.
