1. Product Description

3M™ Fire Barrier Silicone Sealant 2000+ is a ready-to-use, gun-grade, one-component silicone elastomer that cures upon exposure to atmospheric humidity to form a flexible firestop seal. 3M™ Fire Barrier Silicone Sealant 2000+ helps control the spread of fire, smoke and noxious gases before, during and after exposure to a fire when installed in accordance with a listed through penetration or fire-resistant joint assembly.

3M™ Fire Barrier Silicone Sealant 2000+ firestops dynamic construction joints, blank openings and penetrations passing through fire-rated floor, floor/ceiling or wall assemblies and other fire-rated interior building construction. The sealant remains elastomeric, bonds to most common construction materials and exhibits excellent weatherability during construction. No mixing is required.

**Product Features**

- Firestop tested up to 4 hours in accordance with ASTM E 814 (UL 1479) & CAN/ULC S115
- Fire Resistance tested for construction joint systems in accordance with ASTM E 1966 (UL 2079)
- Class 25 sealant, per ASTM C 920
- Compression/extension capability of ± 13%
- Applied with conventional caulking equipment — excellent caulk rate
- Excellent weatherability upon cure
- Excellent adhesion
- Re-enterable/repairable

**Applications**

3M™ Fire Barrier Silicone Sealant 2000+ is a flexible firestop ideal for sealing dynamic joints in fire-rated construction. In addition, 3M™ Fire Barrier Silicone Sealant 2000+ is used in mechanical, electrical and plumbing applications to firestop openings and penetrations through fire-rated floor or wall assemblies. Typical penetrants include: metallic pipe, conduit, power and communication cable and telephone or electrical wiring. 3M™ Fire Barrier Silicone Sealant 2000+ is also used to firestop blank openings and static construction joints.

4. Performance & Typical Physical Properties

Colors Available: Light Gray
Application Temperature Range: -20°F to 122°F (-29°C to 50°C)
Service Temperature Range: -40°F to 302°F (-40°C to 150°C)
STC (ASTM E 90 and ASTM E 413): 56 when tested in STC 56 rated wall assembly
Surface Burning (ASTM E 84): Flame Spread 0, Smoke Development 0

Extension/compression capability: ± 13%
Hardness (ASTM D 2240 Shore A): 40
Tensile Strength: 350 psi (0.59 MPa)
VOC Less H₂O and Exempt Solvents <32 g/L
Elongation at Break (ASTM D 412): 500%

Cure: Under typical cure rate conditions of 75°F (23°C) and 50% R.H., sealant becomes tack-free in about 90 minutes. Full cure depends upon ambient conditions and volume of sealant. Typical cure rate is approximately 1/8 inch (3.18mm) per day.

Volume: 10.3 fl. oz tube (304.8cc, 18.6 in.), 4.5 gal. pail (17,034.4cc, 1,039.5 in.)

5. Packaging, Storage, Shelf Life

Packaging: Product packaged in cartridge or pail is enclosed in HDPE plastic containers.
Storage: 3M Fire Barrier Silicone Sealant 2000+ should be stored indoors in dry conditions between 40°F and 90°F (4°C and 32°C).
Avoid repeated freeze / thaw exposures of the 3M Fire Barrier Silicone Sealant 2000+ while still in the packaging.
Shelf Life: Shelf life of 18 months from date of packaging when stored below 90°F (32°C) in original, unopened containers.

6. Installation Techniques

Consult a 3M Authorized Fire Protection Products Distributor / Dealer or Sales Representative for Applicable UL, Intertek or other third-party drawings and system details.

Preparatory Work: The surface of the opening and any penetrating items should be cleaned to allow for the proper adhesion of the 3M Fire Barrier Silicone Sealant 2000+. Do not use alcohol to clean surfaces (recommended cleaning solvents are mineral spirits, xylene, toluene or methyl ethyl ketone (MEK)). Ensure that the surface of the substrates are not wet and are frost free. Sealant can be installed with a standard caulk gun, pneumatic pumping equipment or it can be easily applied with a putty knife or trowel.

Installation Details: Install the applicable depth of backing material, if required, as detailed within the applicable UL, Intertek or other third-party listed system. Cut the end of the tube spout to achieve the desired bead width when applying. Install the applicable depth of 3M Fire Barrier Silicone Sealant 2000+ into the opening flush with the surface of the substrate, or as detailed within the applicable listed system, at the depth for the assembly and rating that is required. Tool within 5 minutes. Clean all tools immediately after use with mineral spirits, xylene, toluene or methyl ethyl ketone (MEK).

Limitations: Do not apply 3M Fire Barrier Silicone Sealant 2000+ under the following conditions: when surrounding temperature is greater than 122°F (50°C), when surfaces are wet or frost-coated, in unvented spaces where sealant is not exposed to atmospheric moisture, in areas where abrasion or physical abuse of the sealant are likely and/or where painting of sealant is required (Note: once applied, sealant may be exposed to intermittent water — exhibits excellent weatherability when fully cured). Do not apply 3M Fire Barrier Silicone Sealant 2000+ to polycarbonates or to building materials that bleed oil, plasticizers or solvent (e.g. impregnated wood, oil-based sealants, or green or partially vulcanized rubber).

Note: In confined cure conditions, there may be discoloration of brass, copper or other sensitive metals.

7. Maintenance

No maintenance is expected when installed in accordance with the applicable third-party listed system. Once installed, if any section of the 3M Fire Barrier Silicone Sealant 2000+ is damaged, the following procedure will apply: remove and reinstall the damaged section in accordance with the applicable listed system, with a minimum 1/2 inch (12.7mm) overlap onto the adjacent material.

8. Availability

3M Fire Barrier Silicone Sealant 2000+ is available from 3M Authorized Fire Protection Products Distributors and Dealers in the following sizes: 10.3 fl. oz. cartridges (12/case) and 4.5 gallon pails (1/case).
