

**Tough. Gentle.
Brilliant.**

Clinpro™ Propphy Paste

Clinpro™ Propphy Paste

- Removes stains with minimal abrasion to both dentine and enamel.
- Using Clinpro propphy paste results in less gloss reduction, which means the aesthetics and luster of composite restorations will continue to enhance your patient's smile.

Give your patients the best of both worlds—a great polish with less abrasion.

Why choose between a coarse- or fine-grit propphy paste when you can use both? The perlite particles within Clinpro™ Propphy Paste are formulated to break down as you polish from a coarse to a fine grit. This innovative feature provides the stain removal of a coarse paste with less abrasion to the enamel and dentine.

Your patients receive an excellent polish and will be delighted with the result.

Here are more ways Clinpro propphy paste will enhance your procedure:

- Contains fluoride (1.23%)
- Refreshing mint flavor
- Low splatter
- A neutral pH value
- Available in unit dose cups

Pre Use

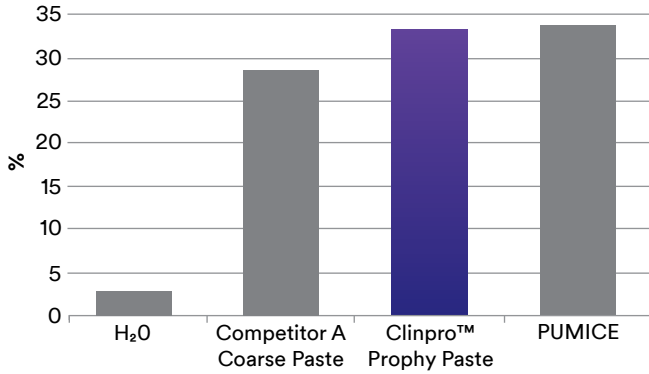

After 15 Seconds

Large cleaning particles within the paste (magnified 3000x) break into fine polishing particles in a matter of seconds.
