You choose it for speed. Now it’s more aesthetic, too.

Posterior restorations are challenging—which is why bulk fill composites that simplify and speed up the procedure have become so popular. However, until now, the faster, easier placement of bulk fill has been at the sacrifice of aesthetics. So, as a global leader in aesthetic and restorative technologies, we went back to our experts for a solution you’re sure to love: 3M™ Filtek™ One Bulk Fill Restorative.

Designed for the posterior, its unique optical properties and improved opacity give you the simplicity of one-step placement—up to 5 mm—without compromising aesthetic results.

Smart Contrast Ratio Management increases opacity without sacrificing depth of cure

Further development of 3M nanotechnology allows us to manage opacity and depth of cure in a smarter way. With our unique Smart Contrast Ratio Management technology, we’ve increased opacity without reducing depth of cure.

In its cured state, Filtek One Bulk Fill Restorative has a higher opacity than 3M™ Filtek™ Bulk Fill Posterior Restorative, resulting in improved aesthetics.

Contrast Ratio

![Band of Contrast Ratios](image)

3M™ Filtek™ One Bulk Fill Restorative 51

Did you know?

Contrast Ratio is the measurement of the translucency or opacity of the material.

*The contrast ratio is the average of all shades.
You’ll like that it’s simple. They’ll be happy that it looks good, too.

More innovative technologies behind 3M™ Filtek™ One Bulk Fill Restorative

Innovative AUDMA and AFM monomers
Reduces shrinkage and relieves stress to allow bulk fill placement up to 5 mm.

Aromatic urethane dimethacrylate (AUDMA) helps reduce the amount of shrinkage and stress that occurs during polymerisation.

3M’s TRUE nanofiller technology
Provides excellent wear resistance and brilliant polish retention.
