Faster and accurate results. Day by day.

3M™ Molecular Detection Assay 2 – Salmonella

Faced with the challenges of controlling one of the most common and widespread pathogens, the 3M™ Molecular Detection Assay 2 – Salmonella becomes an essential tool, thanks to the rapidity and accuracy of its testing method. As a result, it provides the security you need to ensure your customers’ safety.
Reliable information you can trust.
The next generation 3M™ Molecular Detection Assays use isothermal amplification of nucleic acid sequences with high specificity, efficiency and rapidity. Bioluminescence is used to detect the amplification.

A ubiquitous and hardy bacteria.
*Salmonella* is one of the most common food-borne pathogens and causes an estimated 2 to 4 million cases of *salmonellosis* annually. Various serotypes of *Salmonella* have been associated with raw meats, poultry, eggs, milk and dairy products, fish, shrimp, frog legs, yeast, coconut, sauces and salad dressings, cake mixes, cream-filled desserts and toppings, dried gelatin, peanut butter, cocoa and chocolate.

The 3M Molecular Detection Assay 2 – *Salmonella* offers:
- Unique color change indicator for greater control during test processing
- Fewer steps in pathogen testing
- Positive samples identified as early as 15 minutes
- Flexibility to test 1 to 96 samples in each run
- Ability to incorporate other assays in the same run using the same protocol
- Only two transfer steps after a single enrichment
- Ready-to-use and pre-dispensed reagents
- Real-time results to help you make critical decisions faster

A family working together.
3M brings you a total solution with results in 24 hours to help ensure your customers’ safety.

Simple and streamlined workflow.
