Faster and accurate results. Day by day.

3M™ Molecular Detection Assay 2 – Salmonella

Faced with the challenges of controlling one of the most common and widespread pathogens, the 3M™ Molecular Detection Assay 2 – Salmonella becomes an essential tool, thanks to the rapidity and accuracy of its testing method. As a result, it provides the security you need to ensure your customers’ safety.
Reliable information you can trust.
The next generation 3M™ Molecular Detection Assays use isothermal amplification of nucleic acid sequences with high specificity, efficiency and rapidity. Bioluminescence is used to detect the amplification.

A ubiquitous and hardy bacteria. 
Salmonella is one of the most common food-borne pathogens and causes an estimated 2 to 4 million cases of salmonellosis annually. Various serotypes of Salmonella have been associated with raw meats, poultry, eggs, milk and dairy products, fish, shrimp, frog legs, yeast, coconut, sauces and salad dressings, cake mixes, cream-filled desserts and toppings, dried gelatin, peanut butter, cocoa and chocolate.

The 3M Molecular Detection Assay 2 – Salmonella offers:
• Unique color change indicator for greater control during test processing
• Fewer steps in pathogen testing
• Positive samples identified as early as 15 minutes
• Flexibility to test 1 to 96 samples in each run
• Ability to incorporate other assays in the same run using the same protocol
• Only two transfer steps after a single enrichment
• Ready-to-use and pre-dispensed reagents
• Real-time results to help you make critical decisions faster

A family working together.
3M brings you a total solution with results in 24 hours to help ensure your customers’ safety.

Certifications and Validations (view the method for specific details on the validations):
• AOAC® Performance Tested Method™ (Certificate #091501)
• AOAC® Official Method of Analysis™ (AOAC 2016.01)
• NF VALIDATION certificate granted by AFNOR Certification, 3M 01/16-11/16

Simple and streamlined workflow.
