3M™ Pentamix™ 3 Automatic Mixing Unit

**Get the perfect mix
of precision, speed
and accuracy.**

With the touch of a button, you can mix and dispense impression material. Doctors get more usable working time while assistants have less stress and hand fatigue. In the end, your material will be homogeneous and void-free which means the finals will fit better.

The Pentamix™ 3 Mixing Unit mixes and dispenses all your 3M impression materials – even putty – **faster than any automatic mixing unit on the market.** With the working time you gain, you'll even be able to take advantage of quick-setting materials.

Even easier to operate.

The 3M™ Pentamix™ 3 Automatic Mixing Unit operates with push buttons on either side. This makes it easy to use whether you are right- or left-handed. Effortless cartridge exchange and easy-to-attach mixing tips also increase procedure efficiency.

Easy to attach mixing tip without opening device cover.

Easy cartridge exchange.

Push buttons on left and right side allow for easy operation.

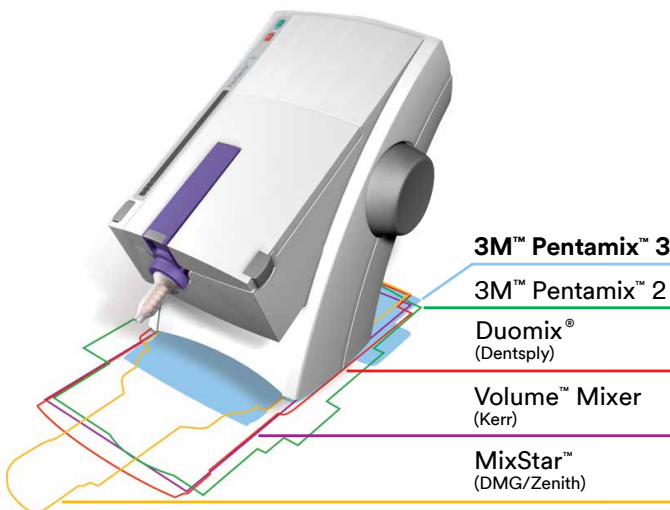

Product name and working/setting times are visible, even when the device cover is closed.

Speed isn't its only advantage.

The unit has the smallest footprint on the market.

That helps you make the most of valuable office space. Its sleek, high-tech design keeps your office looking good, and the wall-mount design option lets you free up your counter completely.
