3M™ Tegaderm™
Wound Care Solutions

3M™ Tegaderm™
Silicone Foam Dressings

Performance Summary: Fluid Management

Challenge: Wound drainage that pools under the dressing, causing periwound maceration

3M solution: Unique multi-layer design

With some silicone foam dressings, wound exudate can pool under the dressing and may lead to periwound maceration. 3M™ Tegaderm™ Silicone Foam Dressings have innovative fluid management technology that vertically absorbs and evaporates moisture, helping to reduce the potential for skin maceration.

Simulated fluid handling study

Simulated in-vitro study with a highly exuding wound model under compression

The 3M™ Tegaderm™ Silicone Foam Non-Bordered Dressing had significantly less fluid pooling on the wound side of the dressing compared to the leading competitive silicone foam dressing.[2]
