**Capture every detail in 2 minutes? Yes, it can.**

**3M™ Impregum™ Super Quick Polyether Impression Material**

Be impressed.
The fastest way to polyether precision for smaller cases.

3M™ Impregum™ Super Quick.

Impregum Polyether impression material has always been the trusted solution for complex situations and implants. So wouldn’t it be great if you could get that same outstanding impression accuracy and detail reproduction even in single-unit cases? To ensure that the highest demands are fulfilled without limiting productivity, we created new Impregum Super Quick Polyether impression material.

With its brand new formulation Impregum Super Quick material combines the outstanding performance and reliability of a polyether with the speed of a VPS. Deep margins and moist environments will no longer slow you down.

**Quicker set.**

So fast, so good: With just a two minute setting time the new Impregum Super Quick material allows for faster impressions in less complex cases like single-unit crowns, implants, inlays/onlays and smaller bridges up to 3 units.

100% Polyether. Trusted precision.

Like all polyethers Impregum Super Quick Materials demonstrate excellent performance in moist situations and great flow behaviour. Both lead to a high level of accuracy and detail reproduction for high-precision restorations.

It is especially important that you get the full working time of your impression material. Because it is a polyether, you get the full 45 seconds of working time with Impregum Super Quick material. You are able to avoid inaccuracies associated with premature setting that is experienced with VPS materials.

**Make your patients feel comfortable.**

An improved fresh, minty taste together with a short time in the mouth significantly increases your patients’ comfort.

Polyether meets CAD/CAM workflow.

Impregum Super Quick material is scannable with the current generation of scanners for a more efficient cooperation with your lab.

A clinical evaluation shows a very high satisfaction rate of almost 95% regarding the precision of 3M™ Impregum™ Super Quick Material impressions and the fit of the final restorations. Source: 3M field evaluation with 447 participants from Europe and the U.S., 2017.

- First superfast polyether with 45 sec. working time and quick 2-minute setting
- Available in medium and light body consistencies
- For monophase and 1-step impression techniques
- Perfect for impressions for single-unit crowns, implants, inlays/onlays and smaller bridges up to 3 units

Impregum Polyether Impression Material

Fast and gentle moisture management and retraction of gingival tissue with 3M™ Astringent Retraction Paste.

High-precision 1-step impression made with 3M™ Impregum™ Super Quick Polyether Impression Material (Medium and Light Body) and single-use 3M™ Impression Tray.

Convenient and highly accurate application of 3M™ Impregum™ Super Quick Light Body Polyether Impression Material using 3M™ Intra-oral Syringe Purple.

Precise, void-free details plus contrasting colors for excellent readability.
Capture every detail in 2 minutes? Yes, it can.
