

Scotch-Brite™ Clean & Shine

Product Description

The Scotch-Brite™ Clean & Shine Pad is a low-speed scrubber pad for daily cleaning and dustless polishing.

- Cleans and shines in the same step, using only a low-speed scrubber.
- 2-in-1 daily cleaning pad. Increases shine with repeated use and may result in reduction or elimination of burnishing. It will increase shine immediately, but even more and more when used regularly
- Designed with contrasting color to provide visible wear indication.
- Usable on both sides with the same proprietary coating.

Use Instructions:

Dust mop entire floor prior to cleaning. Install appropriate sized Clean & Shine pad/s on your cleaning equipment. If using a rotary auto scrubber, a center hub attachment is required. Fill the scrubber tank with water or properly diluted cleaning solution. Clean floor surfaces.

Clean & Shine pads may be rinsed with water to remove soil or debris as needed. Pads may be used on both sides until the coating has been completely worn away to reveal the yellow interior.

Suitable for use on most finish-coated or bare flooring including vinyl, sheet vinyl, LVT, VCT, rubber, ceramic tile, marble, terrazzo, granite and concrete. For best results use Clean & Shine as your routine cleaning pad.

What is the construction of Clean & Shine?

Clean & Shine pads are made of nonwoven polyester fibers bound by a resin system and coated on both sides with proprietary fine abrasive particles.

Why does the coating appear to be thinner on the outside edges of the pad?

The coating is purposely applied this way to provide optimum results on the floor and result in an even, consistent shine.

Can I use Scotch-Brite™ Clean & Shine pads on high speed burnishing equipment?

No. Pads are recommended for use only on low speed rotary or auto scrubber equipment under wet conditions at 150-600 RPM. Use on high speed burnishing equipment 1500+ RPM under dry conditions is not recommended.

Will Clean & Shine pads reduce my need to burnish?

Yes. Reduction in burnishing will vary with frequency of use, traffic levels, equipment, coating or substrate and desired results. Many users have experienced a reduction in burnishing with consistent use of Clean & Shine over time. Reducing the need of burnishing or eliminating it will depend on the individual needs, for those who need a very high level of gloss, they will need to pass the burnisher but surely less often.

How much will Clean & Shine pads increase the shine on my floor?

Shine increase will vary with frequency of use, traffic levels, equipment, coating or substrate and initial level of shine. In extreme traffic environments, Clean & Shine can slow the deterioration in shine while in lower traffic areas the shine will increase steadily from a low starting value.

I just started using Clean & Shine, why I don't see a difference in shine on my floor?

While some customers may see an immediate increase in shine, it is not uncommon for results to develop more slowly. With repeated use over time, Scotch-Brite Clean & Shine should provide a noticeable improvement in shine. Shine appears little by little, the more you use Scotch-Brite Clean & Shine, the higher shine you get.

I have been using Scotch-Brite Clean & Shine daily for an extended time, why don't I see an increase in shine on my floor?

If you have not yet noticed an increase in shine it is likely due to high traffic levels. In this case it is likely that Scotch-Brite Clean & Shine has slowed the rate of deterioration in shine allowing reduction in additional maintenance.

Can I use Clean & Shine on scrubbing equipment without center hub attachment?

Hub attachment is highly recommended on auto scrubbing equipment to ensure ease of use and installation. Clean & Shine is also suitable for use on rotary (swing) machines which do not have center attachment. Auto scrubbing equipment with prongs in place of hub attachment may need modification if the prongs cannot penetrate the surface coating to prevent the pad from spinning out from under the machine during use.

Can I use Clean & Shine for floor stripping?

Clean & Shine is not recommended for use with floor stripping chemical for finish removal. It was designed specifically for cleaning and adding shine to floor surfaces. Pads recommended for floor stripping processes are 3M™ Scotch-Brite™ High Productivity Stripping Pad or 3M™ Scotch-Brite Black Strip Pad.

Is Clean & Shine the right pad for deep scrubbing and recoating jobs?

While Clean & Shine leaves a clean surface, it is not intended for finish removal. The pad recommended for partial surface coating removal in preparation for recoating is Scotch-Brite™ Surface Preparation Pad (SPP).

Is Scotch-Brite Clean & Shine the right pad for deep scrubbing and recoating jobs?

While Scotch-Brite Clean & Shine leaves a clean surface, it is not intended and not warranted for finish removal. The pad recommended for partial surface coating removal in preparation for recoating is Scotch-Brite™ Surface Preparation Pad.

What floor surfaces can I clean with this pad?

Scotch-Brite Clean & Shine is suitable for use on coated and uncoated resilient, concrete, or stone floor substrates. Scotch-Brite Clean & Shine may be used on Scotchgard™ Resilient Floor Protector, Scotchgard™ Stone Floor Protector (concrete only) and most floor surface coatings. Appropriate floor substrates include vinyl, sheet vinyl, LVT, VCT, rubber, ceramic tile, marble, terrazzo, granite and concrete.

Note: Do not use Clean & Shine as a daily cleaning pad on stone or terrazzo floors coated with Scotchgard™ Stone Floor Protector. Scotch-Brite Clean & Shine may be used on these surfaces if uncoated or coated with acrylic floor finish, and may be used on concrete floors coated with Scotchgard™ Stone Floor Protector.

Can I use Scotch-Brite Clean & Shine immediately after applying a floor coating?

It is recommended to wait 24 hours before auto scrubbing any freshly applied floor coating with any floor pad. Consult your coating supplier or refer to 3M Technical Bulletins for further guidance regarding 3M products.

Can I use Clean & Shine on ceramic tile floors?

Yes.

Can I use Clean & Shine on rubber flooring?

Yes.

Can I use Scotch-Brite Clean & Shine pads to clean with water only?

Yes. Scotch-Brite Clean & Shine is effective with just water.

Is a shiny floor more slippery?

Not necessarily. Slip resistance is a primarily a property of a flooring material or coating.

Can I use neutral cleaner with Clean & Shine pads?

Yes. While Clean & Shine is effective when used on an auto scrubber with water only, you have the option to use neutral cleaner or the cleaner of your choice mixed to the proper dilution rate.

Will Clean & Shine pads remove my floor coating?

Scotch-Brite Clean & Shine used with water or mild detergent will not remove a noticeable amount of coating. Pads can be used long term for each cleaning without removal of a significant amount of surface coating. It means that it is not a stripping pad nor a scrubbing pad so it respects the floor with its coatings on all type of floors coated or non-coated.

How do I know when it is time to flip the pads over or discard and replace with new pads?

Pads can be used on each side until the coating has been fully worn away to reveal the yellow interior of the pad. Images of new and worn pads are shown below for reference.

Contrasting color provided wear indication

Flip pads after the first side has worn away. Discard after second side has reached end of life.

How long will the pads last?

Each pad will last minimum 20,000 m² on an auto scrubber over smooth floor surfaces.

Pads aren't lasting as long as expected, how can I increase the useful life of this product?

Several factors can be adjusted to maximize the useful life of Clean & Shine pads. All recommendations are optional.

Machine Variables: Ensure that the auto scrubber driver head/s are level to avoid excess pressure on one side. Ensure pressure exerted by the equipment is in the proper range. Use only enough pressure necessary to achieve desired cleaning results.

Use Variables: Avoid thresholds and rough floor surfaces especially those equal to or greater than ¼ with sharp edges. Rinse pads when necessary to remove excess debris that may collect on the pad surface or edges. Flip the pad each day rather than running to end of life on one side before beginning use of the second side.

We currently launder our floor pads; can I machine launder Clean & Shine pads?

Yes, but it would affect total durability. Pads may be rinsed with water as needed to remove soil or debris.

Can Clean & Shine be used on a self-driving auto scrubber?

Yes.

What pad pressure should be used on auto scrubbers?

Use the lowest pad pressure that is effective to perform adequate cleaning. As long as the pad is cleaning the floor it is also polishing the floor.

Technical Information

Technical information and data, recommendations, and other statements provided by 3M are based on information, tests, or experience which 3M believes to be reliable, but the accuracy or completeness of such information is not guaranteed. Such technical information and data are intended for persons with knowledge and technical skills sufficient to assess and apply their own informed judgment to the information. The typical values shown should not be used for the purpose of specification limits.

Product Use

Many factors beyond 3M's control and uniquely within user's knowledge and control can affect the use and performance of a 3M product in a particular application. Given the variety of factors that can affect the use and performance of a 3M product, user is solely responsible for evaluating the 3M product and determining whether it is fit for a particular purpose and suitable for user's method of application.
